Besides the export of lumber and timber in the present, the demand for spoolwood is very noticeable; likewise shipment of pulp and pulpwood by the Canadian Pacific ocean service liners. In the meantime, the yards at the mills in the Province of Quebec are well stocked with timber awaiting a demand for shipment.

One of the crimes in the shipping trade of Canada is the discrimination against the port of Quebec by the oligarchy of private interests, a crime that could be easily remedied by the Federal Government by the proper utilization and operation of the Transcontinental Railway branch of the Canadian National Railways System. If the Government, which controls the Merchant Marine Service of Canada, would only condescend in the interest of the Canadian shipping trade to put on, say ten out of the thirty-seven vessels now in commission, to carry grain and wood from the port of Quebec to the United Kingdom, at fair cargo rates, the regular liners would be soon forced to a cheaper rate in all classes of shipment. The port of Quebec, with its Louise docks and two million bushel grain elevator—empty all this season—it without exception the best equipped with modern facilities in the Dominion of Canada, and second to none in the continent of America, and still it is ignored by the few interests that are now manipulating the shipping trade of Canada. At the present time, owing to a recession in the waters in the channel between Quebec and Montreal, all deep draught steamers are obliged to come to Quebec to complete cargo.

Activitis Along the St. Lawrence.

Up to a week ago, or the 12th of August, Three Rivers was devoid of shipping. There are now two steamers at that port taking in full cargoes of deals for the United Kingdom. Below Quebec at Bic, a steamer is taking on board a full cargo of deals, and at Sault au Mouton a boat is loading with deals for the United Kingdom. In the port of Quebec there are now three vessels loading: the Manchester Corporation, the Manchester Division, taking in half cargoes each of timber and deals for Manchester, and the Cairnvatona for London.

The movement of lumber and pulp wood to the United States market has shown an improvement of late, which is attributed to less difficulty in the obtaining of American cars. It would appear from the change in these conditions that the expose made in the "Canada Lumberman" in respect to the graft paid to Canadian and American intermediary sources for the privilege of securing freight cars for the movement of wood goods, has had, for the present at least, some effect.

Quebec exporters of pulpwood to the United States, discussing the car shortage situation with the "Canada Lumberman" correspondent, said there was less difficulty now than a few weeks ago in procuring American cars for the shipment of pulpwood from the district of Quebec to the United States, without having to pay $5 in graft money per each car. He also made the statement that there were thousands of cords of pulpwood piled along the lines of the various railways awaiting shipment to the United States paper mills, the only obstacle to prevent immediate movement was the shortage of railway freight cars.

Perpetuation of Reprehensible Practice.

The question of submitting to blackmail by Canadian wood exporters to the United States, who have been mulcted out of $5 per each American car required for the shipment of lumber and pulpwood into the United States, has been discussed with more than a dozen Canadian shippers, who do not deny the matter. They excuse themselves by saying the practice was inaugurated during the war, when they either had to pay or lose business. The practice, they admit, was continued after the signing of the armistice, and even up to the present, and they are at a loss to shake the evil influence. It is now up to the Canadian Lumbermen's Association to expose and ameliorate the evil.

The executive heads and divisional management of American railroads have no knowledge of these conditions, and should be made acquainted, and if possible punish the officials guilty, not only against the fundamental principle of honesty, but the guilt of holding up and clogging the avenues of trade at the expense of the respective railroads involved, the shipper, and the American purchaser. The evil practice has also brought to light that this species of graft has interfered with the legitimate movement of freight cars and the movement of pulpwood piled up in thousands of cords along the lines of various railways in the Province of Quebec, stalled for want of cars; held up by grafters in the employ of American railroad interests, and in all probability responsible in a great measure for the shortage of paper in the United States.

Cooperage Industry in Canada is Busy One

How Various Lines of Stock are Quickly Turned Out—Some Interesting Operations—Economy in Use of Materials and Speed in Production

By J. C. Bailey

One hears and reads very little about the manufacture of cooperage stock, yet this is a large and important branch of the woodworking industry. A number of large plants, employing many hundreds of men, are equipped for the quantity production of staves, hoops and heading. The size of this branch of the woodworking industry can best be judged by the value of its product which in 1919 ran from $4,000,000 to $5,000,000.

One of the larger of our Canadian cooperage plants is that of the Trenton Cooperage Mills, Limited, Trenton, Ont. This plant has a daily output of 45,000 staves, 30,000 hoops, 3000 sets of heading and 500 barrels. Figured in annual output, this would run approximately 5,000,000 to 6,000,000 staves, 3,000,000 hoops, 250,000 sets of heading and 120,000 barrels. In addition about 500,000 ft. of lumber is cut and disposed of each year. Some idea of the amount of stock produced may be gathered from the fact that if the 6,000,000 staves produced each year were to be placed end to end, they would form a continuous line which would reach from Toronto to Vancouver, B. C. The total amount of timber worked up annually is in the neighborhood of 2,500,000 ft.

The wood used is largely elm. Smaller amounts of pine, poplar and basswood are worked into heading stock and also made into sawn staves. It has been found that elm is admirably suited for the manufacture of coiled hoops, in fact, to date, a satisfactory substitute for this wood has not been found, and makes a good cut or sliced stave, so that naturally it is preferred by most manufacturers of cooperage stock. The clear, straight-grained material is made into hoops and the balance worked up into staves. Some of the American plants are using red gum for cutting staves, and while this makes a good stave, it is not at all suitable for hoops.

Hardwoods Bought in Open Market

The raw material in the shape of elm, pine, poplar and basswood logs is purchased in the open market, largely from the farmers and owners of small timber tracts, and in addition a fair proportion comes from the company's own holdings in North Hastings. About six camps were operated last year in these limits. The mill at Trenton enjoys an almost ideal location as it has trackage and deep water frontage. This enables logs to be brought in from the surrounding county by both rail and water and also assists in the distribution of the finished product. Trenton itself is the hub of a network of railways. The C. P. R., G. T. R. and C. N. R. run through the town and in addition a number of smaller local lines serve the adjoining districts.

The logs are all dumped in the booms and fed to the log haul-up. At the present time there are about 1,000,000 ft. of material in the water and on the bank. At the head of the log haul is a power drag saw. Here the clear stock for the hoops is picked out and bolted to length. This is sawn into 1½ in. plank. The balance of the logs are cut into planks and squares for staves. The sawyer must follow the grain closely for the staves must be sliced so as to show the edgegrain. The pieces drop from the rotary saw on to live rolls which carry them to a large trim-saw. This saw cuts the stock into bolt lengths.

These bolts, together with the hoop plank, drop on to a chain conveyor and are carried to the steaming and boiling vats. The hoop stock is piled in large, open tanks and boiled, while the stave material is placed in close retorts and subjected to steam for about twelve hours. The temperature and dryness of the steam is varied according to the condition of the wood. When the material is green and full of sap and moisture, a dryer steam is used.

Economic Operation—Speed Production

The accompanying rough sketch will give an idea of how handling is reduced to a minimum and production speeded up. The material is carried past the trim saw on live rolls, then drops on the endless chain conveyors which carry it to the tanks and steaming chambers. The long hoop stock is laid out on a wide table and then piled into the vats, while the stave material is picked right off the conveyor and placed in the steaming retorts.

Each chamber holds about 2½ cords of material. About 25 cords of stave wood constitutes a day's cut for the slicer. This amount would about fill 10 retorts. As 12 retorts are provided, there is always one or more empty. Thus the men are filling an empty chamber at one side while on the other side a number of men are unloading another one. As the bolts are taken from the steaming chamber, they are piled on trucks and peeled. The bark comes off very readily when the wood is hot. The loaded trucks are run to the equalizing saws, which consist of two saws mounted on one arbor, together with cradle, where the bolts are cut to the exact length required. The saw operator piles the sized stock on a small table, which is within reach of the operator of the stave cutter. In this way excessive handling and lost motion has been to a large extent eliminated.

The staves are sliced on a large knife which works them to the radius of a 20 in. circle. This radius may be varied to suit the requirements of different sized barrels. With this machine one man can cut about 45,000 staves in a day's run, but to do this he does not lose very much time. A helper working behind the stave slicer sorts the staves as they are cut. The good ones are loaded on wagons and taken to the drying shed, while any that will make shorter staves, such as those required for kegs, are passed to a trim saw where they are brought to length. The very narrow pieces and the cull material go to the furnace room. It is not all burned, however, as the best is picked out and shipped to an American glass manufacturer who uses it for making crates. The stave cutter must be quick and must use good judgment as he is required to turn his material so that the staves will show an edge-grain. If cut on the flat there is a great tendency to warp and in addition they flatten out instead of retaining the curve.

Drying Staves in Big Yard

The cut staves are hauled away to the drying shed and yards which embrace about 10 acres. Here they are piled so that the air will circulate freely. If the circulation is not good, there is a tendency for mildew to form. About 40 days is sufficient to remove all surplus moisture, though the time varies depending largely on the weather conditions. When dry, they are joined on foot jointers to the bilge required by the coopers and then packed in bundles. If the staves are required bevelled and crozed for the heading, they are run through an automatic machine which trims, bevels and crozes both ends. This is usually done before they are joined to bilge. The stock is now ready for assembling or shipping.

The hoop material follows a different route. After being removed from the chain conveyor, the hoop stock is placed in large

General view of plant of Trenton Cooperage Mills, Limited, Trenton, Ont.

tanks where it is boiled. It then goes to the slicer, which cuts it into thin strips. These strips are made thin on one edge. To secure this taper, the plank is tilted automatically at every second cut. The hoop strips are run through a special sticker which dresses the two edges and rounds the outside corners. These machines are designed so that two pieces may be run through at a time.

The strips are now passed through an automatic machine which trims them to length, points one end and bevels the other end for the lap. They are next placed in tanks and boiled and then coiled on special machines. The hoops are made up in coils or rolls containing 10 hoops. These coils are piled in the yard and air-dried. Before being placed on the barrels, the hoops are again dampened. The boiling and subsequent air-drying tends to make the stock tough, strong and pliable.

Handling the Heading Material

The heading material is bolted to short lengths, cut into ½ in. pieces on a swing cradle saw and then either air or kiln-dried. The dry material is taken to the heading mill where it is planed on one side, both edges jointed and then cut to shape on a machine which, if necessary, bevels both edges so as to fit the crozers in the barrel staves. The heading is placed in a press and wired in bundles containing 40 pieces or 20 sets.

In assembling, the staves are set up with temporary hoops known as "tresses," and placed over a barrel heater. The heat tends to dry out any moisture which might remain in the stave and also sets the stave in the shape of the bilge. If the staves used have not been bevelled and crozed, a special machine trims, bevels and crozes the whole end of the barrel. Permanent hoops are now forced on and the bottoms put in place which completes the assembling operations.

Both steam and electric power are employed. At one time a large motor was used to drive the rotary saw employed in breaking out the logs. It was found that this was not satisfactory as there was not sufficient momentum or weight to maintain the speed when a long, heavy cut was encountered. A steam engine was installed to replace this motor and an adequate supply of power insured. The group drive is used in the motor installations. Thus, if an accident occurs to the transmission of any one department, it does not necessitate stopping the whole plant. One motor drives the hoop-making group, another the stave-cutting machines and a third the heading equipment, etc. Steam for the engine, vats and retorts is generated in two boilers. The fuel used is sawdust, bark from the stave bolts and part of the cull staves. This leaves the trimmer blocks and slabwood to be disposed of for domestic fuel. The sale of this wood brings in a considerable amount of revenue. The sawdust and refuse from the saws is fed to one furnace by a chain conveyor. This material accumulates in sufficient quantities to keep this furnace going as long as the plant is in operation.

The Trenton Cooperage Mills was formerly operated by the Atlantic Sugar Refineries, Limited, Montreal, but was taken over in 1918 by the present prorietors, Messrs. Fraser & James, who operate under the name of the Trenton Cooperage Mills, Limited. Mr. W. A. Fraser, the managing director, is guiding the destinies of this progressive concern.

Some Tips for Lumber Salesmen

"The Supply Man," the organ of the West Virginia Lumber & Builders' Supply Dealers' Association, under the heading "Why I Never Read on Trains," contains the following from Thomas E. George:

"Since I have been selling I have made it a rule never to read a newspaper or magazine, in the daytime, while riding on trains or street cars. I call on factory trade in a large territory, often sixty to ninety days between calls. By keeping close watch from car windows with pencil and notebook handy I am able to add many new names to my calling lists.

"If while on a street car I see a building of mill construction going up, I usually leave the car at the next stop and get from the workmen the name of the concern that is doing the building. This name is added to my calling lists for future reference and the information is sent to the home office for the mailing list. When I am returning from my original destination I always try to obtain a seat on the side opposite to the one I occupied going.

"When I am riding on trains it is, of course, impossible to get off and investigate; so I make a note of the building and city or town in which it is located, and if I am not stopping off at it on this trip I usually arrange to look up the job on my next.

"I find that this plan has greatly increased my sales; last month it increased my prospects and my general mailing list by ten new names. So the slight inconvenience to which I am put proves beneficial."

Hull Wants New Pulp Plant

A move is on foot in Ottawa and Hull to have Riordon Ltd. build their new pulp and paper mill near Hull instead of at Chelsea, where the proposed power dam will be situated. The Ottawa Industrial and Publicity Commission have the matter in hand and will probably urge on the company the benefits to be derived from locating across the river.

It has been estimated that if the company concurs it will be an increase in the population of Hull of at least 5,000 people. This estimate includes the families of the mill-workers as well as the men themselves.

While this suggestion has been advanced it has also been pointed out that the company will probably plan on using the pond created by the dam as a booming space for the pulp logs and that they, therefore, will build their mill at the dam.

Can Probable Timber Famine be Averted?

Conservation of Forest Wealth is Most Important Domestic Issue in America—Heavy Consumption and Future Demands Ably Reviewed—The Outlook

By C. Price-Green, Toronto, Commissioner, Industrial and Resources Department, Canadian National Railways*

We are facing a timber famine, and the question is, what can be done to avert it. A famine comes gradually, but already there are the first indications of the pinch of starvation in this country. The pulp and paper situation should be evidence to every thinking person.

The most important domestic issue in this country in the very near future, will be the conservation of the forest wealth, for I am of the opinion, that when its rapid diminution is fully realized, something like a wave of hysteria will go over the whole country; this realization cannot come too soon, to avoid what may be seriously regarded as a national peril.

For these reasons I have been asked to address you on this subject. I will, therefore, endeavour to give some idea of the forest resources of United States and Canada, and the havoc that has been wrought in these magnificent possessions, and to show that it is our duty to support to the hilt, the efforts being made to arouse public opinion to the necessity of insisting upon a thoroughly constructive policy for the preservation of what may be still regarded as the finest stands of timber in the possession of the commercial nations. How important this conservation is to the country, can be judged by present consumption. Today the United States is using one-half of the whole world's supply of white paper, representing five and a half million cords of wood yearly, for the equivalent of a pile of pulp, four feet wide and eight feet high, 4,500 miles long, or greater than the distance across the continent..

C. Price-Green, Toronto, Ont.

The newspapers of the city of New York alone consume the equivalent of over 9.000 spruce trees daily, and Chicago over 5,000. One New York Sunday paper takes the spruce from over forty acres for every issue.

These figures are somewhat startling, but are a bagatelle compared with the total consumption of forest product by the United States.

Tremendous Requirements in America.

This country consumes thirty billion feet a year, board measure. For lumber, ties, firewood, and for all other purposes, it takes fully one hundred billion feet a year to supply its requirements, or equal to a pile of solid wood, four by four feet, stretching 98,500 miles or thirty-three times across the continent, and four times around the Globe; translated into terms of cord wood, it would measure a very much greater distance.

These astounding facts are established by the data of the forestry authorities and lead us to an examination of the conditions and the sources of supply.

The forests of America have played a most important part in the economic development of this continent, providing most of the pioneer railways that opened up the country with their early traffic. Their manufacture is one of the basic industries. In Canada its importance is only exceeded by agriculture. In the United States its logging and milling branches rank first in manufacturing. Wage earners to the extent of two million people are dependent on its primary industries. The farms, railways and mines only exceed it in the employment of labor.

Reports show that the United States has a total forest area of 500 million acres, of which:—

100 million are so devastated as to be wholly unproductive.

250 million have been cut over, and are more or less damaged by fire, but are producing new timber, usually in small amounts.

150 million acres are in standing timber, with no annual increase, and a large part, though virgin forest, is of poor quality and very inaccessible.

Of the 500 million acres of forest land, 400 are privately-owned, and 100 million publicly-owned. Most of the latter is in the national forests and it is shown that because it is of poor average quality and hard to reach, it will be many years before it can play any important part in the timber market.

Eighty per cent. of the standing merchantable timber is privately owned and ninety-seven per cent. of the annual cut comes from these forests. The total of this standing timber represents something in excess of 2,500 billion feet, and in the opinion of the authorities at the present rate of cutting, this supply would be exhausted within 50 years, which as it is pointed out, "It is no long time in the life of a nation." In the meantime the population of the country is increasing and the consumption going up in a like ratio. Moreover, the export trade has greater calls upon it, more particularly since the war, and this will have a further effect in reducing the life of the supply. Regarding export, as Col. Henry S. Graves points out, with the exception of Douglas fir, the species that supply the bulk of the export are those which are most depleted. Southern pine forms half of the export trade and the available supply is only 222 billion feet; at the present annual cut of saw log timber of nearly 17 million feet board measure, there remains but about 14 years' cut of the original supplies.

Termination of Southern Pine Supplies.

An official statement of the Southern Pine Association regarding that industry, states that they estimate 81.6% of the mills will cut out their supply in five years, 95.3% in 10 years, and 99% in 15 years. In this connection is pointed out that the cut of other soft woods, such as Douglas fir, which is still abundant, will increase greatly, directly the Southern yellow pine and the Eastern white pine are cut out.

When one considers that in addition to the axe, the forest has many other enemies, the foregoing has added significance. Fire continues to take an enormous toll. Las year Montana had a fire, that alone, wiped out a thousand million feet. Insects of various kinds, fungus, the bud worm, and wind all take their toll. We are told that United States are consuming about three times as much wood as it is producing. It is very questionable whether there is even this much annual growth. Wind alone accounts for much destruction. This will be realized when it is estimated that the loss of one tree on every acre varying in size from 6 to 12 inches in diameter, according to the productive conditions, under which the timber is grown, is sufficient to wipe out the annual increase.

The plain fact, according to the best authorities, is that the forests are steadily deteriorating under cutting and fire, and in the meantime our resources are being mined with practically no effort made for replacement after cutting. The situation is complicated, by the fact that the bulk of the timber in the United States is privately owned, also a large proportion of the land which must grow the timber of the future. While the owners do not apparently accept the responsibility, the forest must be so handled in the public interest as to provide for renewal.

In the Journal of Forestry, it is pointed out that industrial Europe has a per capita consumption of 150 board feet, while the United States has been using 350 per capita. In fifty years the lumber cut must fall far below 30 billion, less than 150 feet per capita, according to the estimated increase in population or less than Europe has found adequate, and has compelled to augment domestic supplies with increasing imports. It points out that Europe has become adjusted to present consumption through the course of centuries, but the United States cannot expect to adjust itself to a reduction to the European level without "suffering tremendous punishment through the dislocation of industries and the disturbance of the habits of life."

Annual Cut Three Times the Growth.

The crux of the situation is dealt with in a significant statement made by the committee, which reads in part as follows:

"The wood we are now using amounts to about 35 billion

*An address delivered recently in Boston, Mass., before the National Editorial Association.

feet. The annual cut is nearly three times the annual growth. Much of the new growth is of poor quality. The annual growth of material, which will make sawn lumber is only about nine billion feet, and some two billion is destroyed by fire and other causes, so that our net annual increment is seven billion feet, only one-fifth of the amount we cut.'

Let us briefly review the situation in Canada, which has about half of the forest resources of the United States, or about 260 million acres of commercial forest. About half her forest areas have been burnt over in the past 100 years, some areas several times. British Columbia alone has lost over 600 million feet from fire.

At the present rate of consumption, about 14 billion feet a year, we have lost by fire, the equivalent of 450 years' supply. On the basis of tax 50c per 1,000 feet b. m. the lowest in effect, it means that the people from this cause have lost 1,000 million dollars.

The United States cannot look to Canada for any alleviation of her situation with respect to sawn lumber, in fact it has been estimated that if Canada were called upon to supply the total demand of the United States, the supply would not last much more than 15 years.

It may be thought that the picture I have drawn is one of blue ruin, but it is simply a presentation of facts that must be faced.

Let us for a moment review the situation affecting the pulp and paper supply. Canada's exports now amount annually to over 100 million dollars in value, and 80% is exported to the United States. This year we shall supply in one form or another nearly one-half the demand of the United States market.

It is a well known fact that the mills of the Eastern States have very small resources behind them, some may have to close down shortly for lack of wood. Even two and three-inch wood was utilized in some mills last year. The situation in Wisconsin and Michigan is very acute, and, as stated by Col. Graves, it "Will only be a matter of time when these mills will have to import their wood from long distance or liquidate investments of great value in waterpower, and plant, and move to new sources of supply."

Movement of Paper Mills to North.

Many firms are establishing in Canada, and more will come. As far as the paper supply is concerned, I am of the belief that with sane management and careful cutting, Canada can supply the demand of this Continent for much longer than has been estimated. It is true tthat from year to year the operation is likely to be more costly, as the mills move further north. At one time the mills were all tributary to the St. Lawrence and the Great Lakes. Some are already operating on the waters which drain into Hudson Bay and more will follow. Dr. C. D. Howe, an eminent Canadian authority, after pointing out that we may have to adapt our mills to the use of such substitutes for spruce as poplar and birch, goes on to show that there is "another alternative before the pulp companies, when the supply of 12-inch spruce gives out, and that is to operate in the Hudson Bay region, where the small undersized trees are found. Thousands of square miles are covered with spruce from four to eight inches in diameter, wood that has attained its growth, will never be any longer and might as well be cut."

The future of the pulp and paper industry is of paramount interest to the Canadian National Railways. The 22,000 miles of line serve practically all the mills in Canada and the sources of supply are all tributary to its system in Northern Ontario, Quebec, New Brunswick and in British Columbia.

In estimating the quantity of pulpwood available in Quebec, it is necessary to ignore the standard of cutting in Quebec based on a minimum diameter of 12 inches, as that of necessity will have to be departed from, not many years hence. While there are no government estimates, there is no doubt that there is a supply of at least 400 million cords in the two provinces or sufficient to supply the present demand for upwards of 70 years. In British Columbia there is sufficient pulpwood to last the present output of Canada, including what we are now supplying the United States, for at least 65 years. While some of the pulp and paper from this source will move by water, the cost of manufacture and transport is bound to go higher all the time. It may be stated that in this connection that on account of the remoteness some of the sources in Ontario and Quebec, that they will also cost much more than at present, but it will be evident from the foregoing that Canada is in the premier position as far as the sources of this manufacture of white paper are concerned, and on account of cheap waterpower can be more cheaply manufactured in Canada.

We therefore conclude that providing the spruce is properly lumbered, Canada's supply on the basis of the present output, should supply a continuous crop, as within the period covered by the estimates given above, there is ample time for reforestation to provide sufficient new growth.

There will be periods of scarcity, and in the meantime, the question is whether the small newspaper is doomed on account of its inability to secure newsprint. The larger publishers with the necessary money are securing themselves with contracts, and by acquiring limits and operating their own mills. The evolution in the ownership of newspapers, which we now see evident in England and on this continent, where large numbers of papers are coming under the same ownership, will be carried on to a great extent, and the control of the sources of supply may pass into the hands of the powerful few.

Such a result is very possible and not pleasant to contemplate, when one realizes the power, political and otherwise, such a combination would weild, and such a state of affairs would not be in the public interest. If this came about, it is very certain, that great efforts would be made to find substitutes for wood pulp. Even at the present time much experimentation is going on to utilize other products of the vegetable kingdom, that have the physical property of felting. Many grasses, weeds and fibres have this property, and a very good paper has been made from wheat straw. You know that the fibre in a spruce log is pretty closely packed in, and economical to handle. In the past the cost of collecting straw and similar substitutes has been considered prohibitive in comparison, but at present prices this is not so much the case.

In the grain-growing districts of the Canadian West hundreds of thousands of tons of straw are burned every year, and in the near future I am of the opinion that this source of material will be utilized for the making of white paper. While this would supply but a small part of the demand, it would be a move in the right direction to conserve other sources.

Returning again to the question of the shortage of timber supplies on the continent generally. When the needs of the case are so great and so apparent, one would think that it would not be difficult to arouse public opinion to the necessity of conservation, and the preservation of the forest. It will on the contrary take a great effort; apathy is hard to overcome, and in this case direct opposition is encountered from some owners, and in high places. Recently a prominent university authority advocated using up our supply of pulp as soon as possible, and putting the mills and waterpowers to other purposes. He said in effect: "What is the use in planting a tree that will not be of commercial value for 60 years," and made allusion to the celebrated and very selfish remark, "What has posterity done for me?" Such an attitude to my mind is nothing short of criminal, more particularly when you consider the benefits this generation has derived from this work; work that went far to save Europe in the late war; for had it not been for the supply of timber, the result of the reforestation in France, we could not have carried on. As Professor Zavitz has so eloquently put it, "that the timber from the forests of France helped to save the situation in the late struggle is now a record of history." And he goes on to point out the fact that the two million acres re-forested by the French at the end of the 18th century are to-day valued at 100 million dollars.

Potentialities of Laurentian Plateau.

We have in Ontario in the Laurentian plateau, 50 million acres of land, much of it unsuited for agriculture, which is capable of growing forest crops which could on the same basis be made worth 2,500 million dollars to the Province of Ontario. Saxony's state forests produce an annual revenue of $5.30 per acre, putting the possible reduction of revenue from this area in Ontario at the low figure of $100.00 an acre, there would be derived a revenue of at least $50,000,000 a year, and in view of the higher prices, bound to prevail, probably very much more than the amount.

Can a famine be avoided in the United States? If immediate action is taken it may be possible, but the facts have to be faced. We must bear in mind that the old forest will be exhausted in 50 years, and you will have to depend on second growth, which may reach merchantable size, of which there will be less than half enough to meet your needs, and it is pointed out in the report I have quoted, that if the gap between the exhaustion of the old timber and the maturing new timber forests is to be bridged, it must be done by keeping alive an enormous number of trees now of young and middle age.

In conclusion, I will quote the solution advocated by Col. Graves: "If we should begin to-day to protect our cut-over lands from fire, and use wholly practical methods of forestry to secure reproduction after logging we could secure in the next 50 or 60 years an annual production of over 60 billion feet a year, without lessening your forest capital, which means that after meeting your domestic needs, you would have from 20 to 25 billion feet of lumber, for export or several times more than you export now."

I have been requested to say a few words with reference to Underwood Resolution, regarding the exportation of pulpwood in Canada.

While it is felt that perhaps this resolution was passed partly as a result of lack of information of the true conditions; still much good may result, as it will have the effect of clearing the atmosphere when

the commission which is to be appointed as being able to ascertain the true state of affairs.

What Canada Supplies in Pulpwood.

To my mind the following important aspects of the case have been overlooked:

The Dominion Government has put no embargo on the export of pulpwood. Certain of the provinces, however, foreseeing the possibility of the exhaustion of their supplies have for some time exercised their right under the British North America Act, prescribing provincial rights to prohibit the export of pulpwood from Crown lands.

That there is no regulation preventing the export of pulpwood from private lands and the U. S. has been receiving for some years an average of a million cords a year from this source or about 25% of their total requirements for pulp and paper, in addition to 80% of Canada's total export of about 100 million in value of pulp and paper.

That it would not be to the advantage of the publishers of the United States if there was a modification of the present regulations, because it is cheaper to manufacture on the ground in Canada where the power is adjacent to the source of supply of the raw material. This is confirmed by your own authorities; the Federal Trade Commission of the United States being on record as having stated that the cost of converting pulpwood into paper is much less in Canada than in the United States.

It is only fair to state that on account of the more profitable market abroad, United States manufacturers have been exporting to the extent of 110,295 tons (1919). The argument was nevertheless advanced, that the minimum by which your production and your imports together, fell below actual requirements, was 63,000 tons. It is obvious that the remedy for this situation lies in their own hands.

That the restrictions do not decrease the amount of newsprint available for use in U. S., but simply affect the point of manufacture and to use a piece of slang, Canada is going the limit now, providing you with 55% of your total requirements.

There should be no more objections to the existing legislation of provinces of Canada concerned, any more than there could be on the part of Canada regarding the establishment by the United States of New Forest Reserves where the pulpwood might be cut for the use of the people of the United States.

In Switzerland is an old law which compels every married couple to plant six trees immediately after the wedding ceremony, and two on the birth of every child. They are planted on commons and near the roads and, being mostly fruit trees, are both useful and ornamental.

Bathurst is Busy Shipping Lumber

One bright spot on the map of New Brunswick just now is Bathurst, where four large vessels are in port and three are loaded. Ten other vessels are due to arrive in Bathurst harbor to load within the next three weeks. In addition to this list at least eight vessels will load at Bathurst before navigation closes. One of the craft at Bathurst is the large four-masted schooner James W. Howard, of Boston. She is loading a cargo of boards for Buenos Aires. The Bathurst Lumber Company has chartered a large number of vessels, including the steamships Berela, for Dublin; Canadian Raider, for Manchester; Canadian Rancher, for Garston Dock; Tento, for Garston Dock; Pensacola, for Great Britain. Others chartered are the schooners Max Horton, for Havana; Samuel W. Hatheway, for Havana; Chautauqua, for Havana; Anna Laura, for Havana; Maurice R. Thurlow, for Havana; W. H. Woodin, Buenos Aires; Huntley, Havana; barque Ba, for Buenos Aires, and the ship Marpesia, for Buenos Aires.

The Danish barquentine Dagny loaded a cargo of lumber this month at Chatham, but was delayed in getting away by the desertion of several of her crew.

Many cargoes of pulp wood are being shipped from Baie de Chaleur ports for Portland (Me.) but in most lumber mill ports the lumber is being piled up awaiting an improved demand across the water. So much is piled in many of the Miramichi yards that extra room has had to be made outside.

Will Divide Loss on Lumber Contracts

Many Canadian lumber companies who supplied lumber to Great Britain during and after the war on contracts made out in pounds, shillings and pence before exchange broke, will be pleased to learn that the British Government has at length agreed not to hold by the strict letter of the contracts, and it will divide the loss where it is proved.

As most of the sales were made, however, while exchange was high, about $4.80 to the pound, and none below $4.50 to the pound, the loss will not be nearly so much as at first anticipated—$200,000 will cover the whole amount.

Company Acquires Large Logging Area

Faced with the necessity of closing down their local mill if unable to run it more economically, the Canadian Puget Sound Lumber and Timber Co., in an attempt to cut expenses, put through one of the biggest timber deals in many years, when they acquired the best stand of timber on the Cowichan Lake Road, from the Victoria Lumber and Manufacturing Co., Chemainus, B. C. This area consists of 991 acres.

The company has found it impossible to compete for logs in the open market and operate the mill at a profit, and it will make no further efforts in that direction. It is estimated that a saving of $6 on every thousand feet will be made possible by the acquisition of these logging areas.

One of the large 6-passenger flying boats operated on a weekly service between Toronto and the Muskoka Lakes, a distance of 130 miles, by the Bishop-Barker Aeroplanes, Limited. Acknowledged to be the most famous airmen of the war, Lt.-Col. W. A. Bishop and Lt.-Col. W. G. Barker and their organization are becoming the recognized aerial experts of the Dominion. The possibilities of aerial surveys of timber limits and for fire protection work are being seriously considered by many pulp and paper manufacturers and leading lumbermen

A glimpse of the Pacific Mills, Limited, at Ocean Falls, B. C. The production of the plant is 30 tons daily of kraft pulp and 220 tons of newsprint. A. B. Martin is president of the company and J. H. Lawson secretary. The head office is at Vancouver

General view of the Sturgeon Falls unit of the Spanish River Pulp & Paper Mills. The company also has pulp and paper mills at Espanola, and Sault Ste. Marie. The daily production of all the plants is 585 tons of newsprint; 400 tons of groundwood pulp; 200 tons of sulphite pulp and 35 tons of woodboard pulp.

General view of the enterprises of the Brompton Pulp & Paper Co., at East Angus, Que., of which J. A. Bothwell is general manager. The daily newsprint production of the company is 120 tons; groundwood pulp 220 tons; boxboard 55 tons; sulphate pulp 90 tons; kraft pulp 60 tons

A portion of the Whalen Pulp & Paper Company's mills, Limited, at Swanson Bay. The company also operates other plants at Port Alice and Wudfiber Bay, B. C. The output is now 80 tons a day of strong sulphite pulp; 70 tons easy bleaching and 30 tons of bleached. Changes are being effected which will considerably increase the capacity

Pulp and Paper Possibilities of British Columbia

By William Turnbull, British Columbia Lumber Commissioner, Victoria

Little does that smartly turned-out youth turning the corner of Yonge and Adelaide streets in Toronto imagine that his brilliant-hued knitted "silk" neckwear formerly graced a mountain slope in British Columbia; that his "silk" socks formerly clothed foot-hills instead of feet, and that his "silk" underwear is probably composed of British Columbia spruce, hemlock or balsam. Nor does he dream that at no distant date his neatly-cut "tweed" suit may have as lofty an origin. The Chinese gentleman who, centuries ago, first stretched silk fibre over bamboo poles had not the faintest idea of what he had started.

And the genial editor of the "Canada Lumberman" asks for some notes on the "Pulp and Paper Possibilities of British Columbia." What a temptation to a British Columbian!

Prophecy is easy—and safe—if one doesn't live too long or take too short views, and prophecy regarding the future of the pulp and paper industry in British Columbia is the easiest and safest kind there is.

The Markets are World Wide

The world is paper hungry, as well as lumber hungry, and the number and variety of articles made from pulp and paper is growing rapidly. Binder-twine, onion sacks, baby-buggies and furniture made of paper are in daily use, without stirring the curiosity or imagination of the user.

The demand for newsprint from every civilized corner of the world appears to be insatiable. The public appetite for bulky newspapers has developed to tremendous proportions, and seems to be most voracious on Sunday mornings, when huge quantities of white, yellow and pink newsprint are devoured without any apparent signs of indigestion.

The natural markets for British Columbia pulp and paper are Western Canada, Western States, Japan, China, Australia, New Zealand, South America, South Africa and India, but, in the abnormal present day markets, enquiries are coming from the Eastern States and Europe, particularly from Roumania, Bulgaria and Italy.

British Columbia mills manufactured last year 123,607 tons of newsprint and 7,202 tons of wrapping paper, as against 112,206 tons of newsprint and 8,277 tons of wrapping in 1918, while 9,473 tons of sulphate pulp was manufactured, as against 12,188 tons in 1918. In 1913, British Columbia's paper output was only 50,000 tons.

With two paper and four pulp plants, the industry in British Columbia is firmly established though still in its infancy. The infant is remarkably healthy; is situated in an ideal climate for rapid growth, and is surrounded by every natural advantage.

The Pulpwood Supply is Abundant

Without taking into consideration cedar, Douglas fir and the minor species, there are, according to the report of the Commission of Conservation, 180 billion feet of timber in British Columbia suitable for the manufacture of pulp. This estimate of spruce, western hemlock, balsam and some of the pines is based upon what is considered merchantable saw-timber, and does not include inaccessible material, nor timber which is now considered too small for saw logs, but which may be utilized in the manufacture of pulp.

Assuming that probably one-third of the above quantity may be used in the manufacture of lumber, there would still remain 120 billion feet of timber or about 257 million cords (on the coast basis of 700 board feet per cord) suitable for pulp.

This estimate, however, covers only accessible merchantable timber and does not include smaller sized timber, which is quite suitable for pulp. How much of this smaller growth there is we do not know, but the quantity must be very large. One of the largest logging companies on the coast is to-day logging pulp wood on its logged-off lands and is taking great quantities of hemlock down to a four-inch top. Much of the small timber brought down by high-lead logging is thus being disposed of instead of being left in the woods.

The above estimate also does not take into account some 97,000 square miles of forest land, most of which is covered by young growth, which is working night and day from spring to fall to attain pulpwood size. Generally speaking, our knowledge of rate of growth throughout British Columbia is slight, but actual investigation in the East has shown an annual increase in Douglas fir of 1000 board feet per acre. In the warm, moist Coast climate growth is naturally more rapid than in the interior. Estimating the growth of this young forest at the very low figure of 100 board feet per acre gives an annual increment of six billion board feet.

Small Timber May Prove Attractive

It is also not unlikely that much of the timber in this Province which has been considered inaccessible by the logger, on account of the small return obtained from low grade material, may prove attractive from a pulp standpoint.

Supplies of pulpwood in the Eastern States and in Eastern Canada are running low and pulp interests in the East are naturally looking around for new sources of supply. The East is looking towards British Columbia, and it is looking in the right direction.

Enough has been said to show that British Columbia has a huge supply of pulpwood ready and getting ready for the logger and pulp and paper manufacturer. It has become a habit to speak of British Columbia's timber supply as inexhaustible. This is a very wide term, which, no doubt, was at one time applied to the timber stands of Quebec, Ontario, Michigan, Wisconsin and the Southern States.

British Columbia has ample timber to warrant the establishment of many more pulp plants than are in operation there to-day. The duration of its supply of pulpwood depends upon the cutting methods employed and upon the foresight of the operator and the provincial foresters. If the forests are protected from fire, and are scientifically cropped, as in Sweden, leaving the necessary seed trees, and reproduction is, if necessary, assisted by artificial reforestation in time to assure another crop in due course, a perpetual supply of pulpwood will be forthcoming when needed. By taking proper measures the supply can be rendered really inexhaustible, but it is unsafe, even with the huge natural supply possessed by British Columbia, to start out with the inexhaustible idea and to "mine" timber regardless of the future.

Numerous Ideal Locations Prevail.

The prospective Coast pulp manufacturer requires a mill site adjacent to a water power capable of economical development and on a natural harbor capable of accommodating ocean-going vessels.

The Commission of Conservation report ("Water Powers of British Columbia," published by Commission of Conservation, Ottawa), on the water-powers of British Columbia gives all available data regarding some 644 water-powers, many of which are suitably situated for pulp mill purposes, while the coast line of the province provides an ample supply of natural harbors.

There are many large areas of pulpwood in the southern interior of the province, several of which have been looked over recently with a view to early development. The coast possesses some advantages over the southern interior, particularly in the production of newsprint, but the woods of the latter are well suited to the production of sulphate pulp for kraft paper and of ground wood for such articles as wall board.

With closer utilization of wood coming rapidly, the day should not be far distant when logging and mill waste will be manufactured into a variety of articles. The waste from high-lead logging is enormous and the pulp mill will some day be kept busy eating up and digesting that waste.

The establishment of a pulp plant means the investment of a large amount of capital, and the investment of millions naturally requires close investigation. British Columbia has the timber, the water-power, and the mill sites and the pulp manufacturer is invited to come and see them at first hand.

Pulpwood Resources Arouse World Interest

Over four million cords will be consumed this year in the Dominion—Ensuring future supplies of pulpwood, by inaugurating prompt and adequate systems of reforestation, is problem of pressing importance—What the Eastern provinces possess and are supplying to the market annually

By Edward Beck, Montreal

Many things have transpired of late to focus world-wide attention upon Canada's pulpwood resources, which to-day are a subject of keen interest on three continents and in a score of different countries.

First of all came a universal shortage in the world's supply of paper, not of newsprint alone, about which the public is more or less informed, but of wrapping, book and writing and other varieties, most of which are derived from the same raw materials. The paper shortage was a legacy of the war, due in part to the stationary condition of the industry during the war period, aggravated by an unexpected and unprecedented demand with the coming of peace, and rendered more acute by the sudden awakening in the United States to the fact that pulpwood in the States, east of the Rocky Mountains, was no longer sufficient to supply the paper mills in the territory, to say nothing of providing the raw materials for additional mills.

Paper manufacturers in the United Kingdom who, prior to the war, had derived the greater part of their pulp supplies from Germany, Sweden, Norway and Finland, and who had looked forward to an immediate resumption of their trade with these countries with the incoming of peace, found their expectations realized only to a very limited degree, owing to the excessive costs and the shortage of raw materials. They began at once to turn their attention to Canada.

Across the Pacific, Australia, New Zealand and Japan, once more or less indifferent to Canada's possibilities as a source of paper and paper-making materials, suddenly evinced a lively interest in the subject.

In the United States, where approximately 80 per cent. of all the pulpwood cut in Canada is absorbed, in the form either of logs or pulp or paper, an agitation was started to bring about Governmental pressure to secure the removal of certain restrictions imposed upon the use of pulpwood cut from the Crown lands of Ontario, Quebec and New Brunswick. These restrictions, adopted for the purpose of conserving the supply and of encouraging home industry, require that all such wood shall be manufactured into pulp or paper in Canada. The object aimed at in the States is to secure the unrestricted right to exploit our Crown lands for American manufacturers. The United States Congress took up the matter and adopted, practically unanimously, the so-called Underwood resolution, providing for the appointment of a Commission to visit Canada with a view of obtaining a lifting of the restrictions, or, failing in os doing, to recommend some means of "retaliation" likely to bring about the desired result. Only the withholding of the president's approval kept this action from becoming effective. Agitation for the re-enactment of the legislation by the next Congress is now being carried on.

British paper manufacturers, greatly concerned over the increasing scarcity of pulpwood and its ever-rising value, despatched representatives to Canada to look into the situation here. Among others who came was Mr. G. R. Hall-Caine, former deputy paper controller of Great Britain and himself interested in the dual interests of paper-making and publishing. Mr. Hall-Caine made a very thorough investigation, spending some three months in Canada and the United States. On his return to England he reported that the situation calls for increased manufacturing capacity of mechanical pulp, and said that the point to be decided by capitalists in Great Britain was whether other countries should be allowed to monopolize Canada's pulpwood resources or whether British capital should put down mechanical pulp mills in Canada to ensure their own supply. (Since Mr. Hall Caine made his report, and probably as one of its consequences, the Imperial Paper Mills, a £1,000,000 British corporation, has joined with Lord Rothermere and companies with which he is associated in the purchase for $3,000,000 of the Gulf Pulp & Paper Company, Limited, of Clarke City, Que., with its pulp mills and timber limits, comprising 625,000 acres and an annual woodpulp output of 25,000 tons, while several similar developments based on the investment of British capital in Canadian pulpwood limits are reported to be in progress or practically concluded).

Edward Beck, Montreal

Investigating Canada's Ample Assets

Sweden, Canada's principal competitor in the production of pulp, sent a delegation of its leading pulp and paper manufacturers to this country for similar purposes of investigation.

Australia, New Zealand, Japan, Italy, Brazil and several other countries, have, within the past twelve months, all had emissaries in this country for the express purpose of enquiring into the extent of our pulpwood resources, and of discovering to what degree, if any, their own countries can depend upon Canada for a share in the distribution of its pulpwood and the products derived therefrom.

The Imperial Press Conference, bringing together newspaper publishers from the United Kingdom, Australia, India, South Africa, the West Indies, New Zealand, Ceylon, Singapore, Malta, Egypt, Newfoundland and, of course, Canada, and other parts of the British Empire, devoted a large part of its time and attention to the question of pulp and paper and to the possibility of drawing upon the Dominion for the greater part of the Empire's requirements of these commodities.

In view of the almost universal interest thus displayed in the subject of Canada's pulpwood resources, it follows, quite logically, that the provinces themselves are beginning to take fresh stock of their forest wealth. They are awakening to the fact that they are obtaining neither the full benefit they might obtain at present for the use of their heritage, nor taking the steps necessary to ensure the permanency of the revenue they now derive therefrom.

Coincidentally, with the world-wide interest suddenly displayed in Canada as a pulp and paper producing country, the Dominion itself has been aroused to the fact that an industry which, though but the growth of a comparatively few years, represents a capital investment of three hundred million dollars, which contributes more than one hundred million dollars to Canada's external trade and that, in markets where they accomplish the greatest national service, whose products are approaching an annual valuation of one hundred and fifty million dollars, is entitled to consideration if not, indeed, to encouragement and support.

What is the Extent—How Long?

The question naturally arises, what is the extent of Canada's pulpwood resources and how long are they calculated to last ?

Probably no Canadian topic of discussion was ever met with such a diversity of views, and none has ever given rise to such a mass of fallacious reckonings or mischevious misinformation. Just to mention one single instance, because it is official and because it is typical of the rest: In 1903—seventeen years ago—Paul Blouin, superintendent of forests, in Quebec, estimated that the pulpwood forests in that province contained 200,000,000 cords of wood. (That was, of course, before the annexation of Ungava to Quebec). To exhaust this supply, he estimated, it would require 4000 years, without taking into account the immature timber, or 20,000 years if all the growing timber were taken into account. On this calculation, the premier of the time—the Hon. S. N. Parent—based the forest policy of his Government. To-day, it is known, that Quebec's Crown timber lands are incapable of sustaining their present annual harvest for a period of more than fifty years, even if that long, unless augmented by scientific reforestation. Among the measures proposed by the present Government to ensure their perpetuity are vigorous regulations establishing a maximum annual cut to prevent undue depletion and a minimum as a check and preventative of

merely speculative ownership and to give the province an increased revenue. These regulations are to be backed up by the imposition of increased stumpage dues and a forward policy of reforestation, generally, an earnest of which is already seen in the fact that the provincial forestry department is now planting some three million trees annually.

Canadian Provinces are Wakening Up

Recent investigations in Ontario, revealing the manner in which some of the pulpwood stands in that province have been "mined" are almost certain to lead to some drastic changes in the forestry regulations of that province.

New Brunswick and Nova Scotia are also awakening to a knowledge of the value of their pulpwood resources and of their potentialities as factors in the world's commerce.

In "A Handbook of the Canadian Pulp & Paper Industry," recently issued by the Canadian Pulp & Paper Association, an attempt is made to present, from official sources, some accurate information as to the extent and probable durability of Canada's pulpwood resources.

Taking spruce, hemlock, balsam fir, jack pine, tamarack, poplar and basswood as representing the coniferous species adaptable to making pulp (in 1918 spruce contributed 74.12 per cent; balsam fir, 20.23 per cent.; hemlock, 4.03 per cent.; jack pine, 1.17 per cent.; poplar, .45 per cent., and other species an inappreciable percentage of woods used in the production of pulp in Canada), it is stated that the Commission of Conservation estimates a total of 901,000,000 cords of coniferous pulpwood species on Canada's 350,000 square miles of forests.

Western Canada is said to possess a total of 340,000,000 cords of spruce, western hemlock and balsam, of which 255,000,000 cords are in British Columbia and 85,000,000 cords in the Prairie Provinces.

Eastern Canada, including Quebec, New Brunswick, Ontario and Nova Scotia are estimated to possess 306,000,000 cords of actually available spruce and balsam, after making deductions for wood withheld from cutting by provincial regulations and for waste and loss in logging and driving. Ontario's available stock would, it is estimated, be increased by 38,000,000 cords by the extension of the Temiskaming & Northern Ontario Railway from Cochrane to James Bay. By provinces the figures are: Quebec, 155,000,000 cords; New Brunswick, 26,000,000 cords; Ontario, 100,000,000 cords; Nova Scotia, 25,000,000 cords.

Two huge piles of pulp wood at Charlton, Ont., where rossing plant of the Beaver Board Co. of Thorold, is located

The Ravages of the Budworm

The areas of forest in Eastern Canada which are reasonably accessible to existing means of transportation, have, it is explained, to a very considerable extent, been culled over, or logged out, during the period since the earliest settlement of the country. The original stand has thus, by cutting and by fire, been reduced to a very material extent. Probably not less than one-fourth of the balsam in Quebec and one-third of the balsam in New Brunswick has been destroyed by the budworm during the past ten years.

While none of the provinces has what may be termed a perfected forestry system, all are working to that end. Adherence to a rigid system of diameter limit regulation, such as is for the msot part in effect on Crown lands in Quebec and New Brunswick, does not by any means constitute really advanced forestry practice. At the present time, merely a start has been made in gathering the specific knowledge necessary for carrying an scientific forestry, through research by the provincial Forest Services of Quebec, New Brunswick and Ontario, the Dominion Forestry Branch, the Laurentide Company, the Riordon Pulp and Paper Company, the Bathurst Lumber Company, the Abitibi Power and Paper Company, the Spanish River Pulp and Paper Company, and the Commission of Conservation of Canada.

The Province of Quebec imposes a diameter limit of 7 inches upon balsam and swamp spruce and 12 inches upon all other spruce. Consequently there is a very considerable amount of this timber, comprising the sapital or growing stock, which is not allowed to be cut because of this restriction. In the second place there is always a shrinkage between the woods and the mill, due to waste in logging, decay or windfall before the next cut, logs stranded along the shores of lakes and streams, and logs lost by sinkage during the drive. To get at the amount of timber which may actually be available at the mill, it may conservatively be estimated that a deduction of at least one third must be made, due to these several items of shrinkage. If such a deduction be made, it would leave of approximately 100 million cords on licensed Crown lands, 30 million really available spruce and balsam, cords on unlicensed Crown lands and 25 million cords on privately-owned lands, or a total of 155 million cords.

According to the Dominion Bureau of Statistics, the 1918 cut of spruce and balsam in Quebec for pulpwood and lumber was nearly 3 million cords. Of this amount 885,772 cords were exported to the United States and may be credited to lands in private ownership. Also a considerable volume of the wood from privately-owned lands was manufactured in Canada.

Fifty-Two Years Supply in Quebec

Taking the situation as a whole, with 155 million cords of actually available spruce and balsam, on the basis of delivery at the mill, and a cut in 1918 of around 3 million cords, it is estimated that Quebec has, at the present time, the equivalent of 52 years' supply.

Beyond this fifty-two years' supply of available pulpwood, at the 1918 rate of cutting, dependence must necessarily be placed upon annual growth for the continuance of operations. As a matter of fact the rate of cutting is increasing steadily, due to new developments and the extension of existing plants. In addition to the accelerated rate of cutting it must be borne in mind that some fires will inevitably occur, and that there will be serious losses from insects and decay. Balsam is particularly susceptible to attacks by the budworm and to injury by butt-rot and heart-rot. It is estimated, for example, that around 25 per cent. of the balsam in Quebec has been destroyed by the budworm in recent years, as already stated. Based on a careful calculation and taking into account all of the numerous factors it is estimated that the pulpwood forests of Quebec, under proper management and direction, may reasonably be expected to yield an annual growth of three million cords on licensed Crown lands, one million cords on unlicensed Crown lands and one million cords on privately-owned lands, or a total annual yield of five million cords a year of accessible and available spruce and balsam, as an offset to the three million cords now being cut annually. It will be seen that on this basis, the annual net increment would be two million cords.

Many New Pulp Plants in Ontario

Applying the same principles to Ontario, this authority finds the really available quantity of spruce and balsam, after deducting for waste and loss in logging and driving, and for defective balsam, approximately 55 million cords on licensed Crown lands, 27 million cords on unlicensed Crown lands, 18 million mords on privately-owned lands or a total of 100 million cords, which would be increased by 38 million cords by the extension of the T. & N. O. R. R., as before mentioned.

The 1918 cut of spruce and balsam in Ontario for pulpwood and lumber was, it is stated, as nearly as can be determined from the Census Bureau of statistics, slightly over 1,116,000 cords. This includes quantities consumed or produced in the province, as well as exports. Additional pulp and paper plants are being established, and extensions to some of the existing plants are under way, so that there is every reason to expect that very shortly the cutting of spruce and balsam will be at the rate of 1.5 million cords per year or more.

At the 1918 estimated rate of cutting, Ontario's really availale

spruce and balsam would be equivalent to 90 years' supply. When, however, the rate of cutting for pulpwood and lumber is increased to 1.5 million cords annually of spruce and balsam, this would represent only 67 years' supply of wood accessible to existing transportation and really available, after deducting for loss and waste in logging, driving, and for defective balsam. It is pointed out that most of the spruce and balsam now being cut for pulpwood is from 100 to 200 years old or more; also that there is a heavy loss from windfall in the under-sized timber, after logging. In very many cases of heavy cutting, a second operation may not be worth while until from 40 to 60 years have elapsed.

If a possible growth rate of two per cent. be assumed upon 145 million cords of commercially accessible spruce and balsam, there would be indicated a possible production of 2.9 million cords per year, which, of course, would leave room for a great expansion of the industry beyond what is under way at present.

Process of Crowding Out the Forest

The exports of pulpwood from Ontario ports to the United States were, in 1915, 202,239 cords; in 1916, 149,745 cords; in 1917, 161,652 cords; and 1918, 199,421 cords, the great bulk of which was spruce and balsam. A large proportion of this is no doubt from settlement lands in process of clearing. Not all this material was cut in Ontario, the Customs returns showing only point of exit from Canada. The amount cut in Quebec and exported through Ontario ports can not be determined from any records available. This point applies of course to New Brunswick as well.

A further point with reference to future growth is that large areas of pulwood lands in Northern Ontario, as well as in Northern Quebec, are being cleared up for settlement, and will never again produce a crop of pulpwood timber. This process of crowding out the forest will increase in future years. Also, a large area of timber land in Central and Southern Ontario is not a material factor in the production of pulpwood, other species predominating, such as white pine, red pine, hemlock and the various hardwoods.

The statement gives the extent of the Crown lands area of New Brunswick at approximately 7,500,000 acres, of which 2,000,000 acres consist of barren land, leaving 5,500,000 in forest. The area of Crown land actually under license to cut timber during 1919 was 6,332,000 acres. This includes a considerable area of water surface and barrens, so that it is concluded that the area of forest land is around 5,500,000 acres.

It is estimated that this 5.5 million acres of Crown lands may contain 20 million cords of spruce and balsam. In this connection, it must be remembered that there are considerable areas of hardwood lands containing little or no spruce and balsam; also that the Crown timber lands have been logged over to a greater or less extent from the period of early settlement and that fires have caused heavy damage to the stand.

Of settlement lands containing timber it is estimated that there may be within the province 2,500,000 acres. These lands are accessible to transportation and have, for the most part, been heavily cut over for many years past. The amount of spruce and balsam on these lands may be approximated at 4 million cords.

There are approximately 4,500,000 acres of privately-owned timber lands, mostly held by commercial concerns. These lands may contain 12 million cords of spruce and balsam.

Available Resources of New Brunswick

Based on these calculations New Brunswick is credited with really available spruce and balsam, 14 million cords on licensed Crown lands, 3 million cords on settlement lands, 9 million cords on privately owned lands, or a total of 26 million cords.

Thus, it is stated, there are within the province of New Brunswick approximately 12,500,000 acres of lands more or less covered with forest, and containing probably around 36 million cords of spruce and balsam. This is an average stand of 2.9 cords per acre for the entire area, and is believed to be within the bounds of reason.

The 1917 cut of spruce and balsam for lumber and pulpwood was approximately 1,250,000 cords, as nearly as can be determined by the Census Bureau statistics. In 1918, it was decreased to 987,000 cords. At the 1917 rate of cutting, the existing supplies of timber would be sufficient for less than 30 years. At the decreased rate prevailing in 1918, there would be supplies for 36 years, assuming that the entire estimate will be available at the mill. If, however, deductions be made, as in the case of Ontario and Quebec, for Crown timber over the diameter limit prescribed, for waste in logging, loss in stream driving, and merchantable material left uncut that will be destroyed by insects, decay and windfall before another cut, there are but 26,000,000 cords of really available spruce and balsam on the basis of scale at the mill. This, at the 1917 rate of cutting would represent but 21 years' supply, which would be extended to 26 years at the reduced rate prevailing in 1918.

1920 drive of pulpwood in the basin of the Donnacona Paper Company's mill at Donnacona, Que. The drive is estimated to contain 100,000 cords of wood and to have a marketable value of $2,000,000

Of the 987,718 cords of spruce and balsam manufactured within and exported from New Brunswick in 1918, 374,040 cords were pulpwood, of which 263,907 cords were exported to the United States. Thus, 70 per cent. of the pulpwood of New Brunswick is exported in the raw form for manufacture in United States mills, as contrasted with 20 per cent. from Ontario and 45 per cent. from Quebec. In 1917 the percentages of pulpwood export were: New Brunswick 61, Ontario 13.6, and Quebec 37. The pulpwood exported is of course to be credited to privately-owned lands, in addition to an unknown amount manufactured within the province.

If an average rate of volume production of 2 per cent. be applied to the total estimated stand of 36 million cords, the annual volume increment would thus be 720,000 cords, which is less than three-quarters of the 1918 cut, and only 57% of the 1917 cut. Thus, cutting of spruce and balsam in the province of New Brunswick is progressing at a rate much more rapidly than the estimated annual growth.

The amount of spruce and balsam in Nova Scotia is estimated at 25,000,000 cords. The 1917 cut of spruce and balsam within the province, for lumber and pulpwood, was equivalent to 313,812 cords. In 1918, this had dropped to 206,846 cords. Thus, at the 1917 rate of cutting the supplies of spruce and balsam in Nova Scotia would be equivalent to 80 years' supply. The forest on the mainland has been heavily cut over since the early settlement of the country, and enormous damage has been caused by fire. On Cape Breton Island, however, there are large quantities of spruce and balsam, particularly the latter, which it has not yet been found commercially feasible to operate. This fact accounts for the large apparent supply of pulpwood species in Nova Scotia.

Notwithstanding the fact that practically all its forests are in private ownership, so that there is no legal restriction upon the export of raw pulpwood, such exports are extremely small.

A report issued by the Canadian Government in 1916 states: "The quantity of pulpwood manufactured into pulp in Canada has been steadily gaining on the amount of wood exported to other countries in the unmanufactured state. In 1908, 482,777 cords were manufactured into pulp in Canada, and 794,896 cords were exported in the raw state. In 1912 the figures were: Manufactured in Canada, 866,042; exported in the raw state, 980,868. The dividing line was crossed in the year 1913, since which time the quantity manufactured in Canada has exceeded that exported. In 1915, 1,405,836 cords were manufactured in Canada and 949,714 were exported in the raw state. In 1916, these figures had risen to: manufactured in Canada, 1,764,912 cords; exported in the raw state, 1,068,207 cords, showing that 696,705 cords more were manufactured into pulp in Canada than were exported in the raw state to be manufactured abroad."

Exports of pulpwood have averaged over one million cords a year for the past twelve years. The total consumption, including exports, is expected this year to reach the enormous quantity of well over four million cords and is likely to increase at a much more rapid rate of progress during the next five years. There is, therefore, every reason to anticipate that Canada, despite its enormous original forest wealth, is in danger, so far as the Eastern provinces are concerned, of finding itself in the same predicament that the Eastern states are now in unless immediate steps are taken by the respective provincial governments to ensure future supplies of pulpwood by the inauguration of prompt and adequate systems of reforestation.

Busy Lumber Enterprises of North Bay District

The social and recreational features incident to the annual outing of the Retail Lumber Dealers Association of Ontario were fully set forth in the last issue of the "Canada Lumberman," and the potentialities, fertility, progressiveness and expansion of northern Ontario were given considerable attention. Needless to say, the eyes of the visitors were opened widely in regard to what they saw on every side. The knowledge of the lumber merchants of old Ontario has been extended and, to-day when the North is referred to, everyone of those, who participated in the trip, will have a good word to say regarding that portion of the province which heretofore they knew little of, save in a lumbering sense.

Of late years the North has been coming to the front as a great and rich mining territory. In years previous to the Cobalt, Porcupine, Timmins and other booms, the lumbering industry was well represented. To-day the saw mills are as up-to-date and as representative in character as are to be found in any other portion of the Dominion. They are enjoying a busy season, and are cutting splendid timber which commanded the admiration of the touring dispensers of wood products. It was stated by a leading speaker that, during the past 25 years, over one billion feet of lumber had been taken out of the Lake Nipissing district, and there was a vast amount left yet. All felt that the agricultural possibilities of the country were being overlooked, and that sufficient encouragement was not being extended by the provincial administration in the way of building roads, supporting the erection of pulp plants, and adopting a more progressive and effective system of forest conservation.

These are certain features that may be discussed in the "Canada Lumberman" in subsequent issues. The present, however, is a time when passing reference to the humming saw mills at Callander, Trout Mills, Cache Bay, and other points is of more particular interest and timely importance.

A brief description of the mills, their equipment, facilities, history and production is given in the order in which they were visited. All the manufacturers extended a cordial welcome to the travelling lumber merchants, who will never forget the warm handshakes and sincere words of their hosts.

Visit to Callander Saw Mills

The first plant visited was the Callander Saw Mills, which are located at Callander, nine miles southeast of North Bay, and are owned and operated by A. B. Gordon & Co.

Mr. Gordon is a brother of Senator George Gordon, of North

The mill of A. B. Gordon & Co., at Callander, one of the busy plants of the North

Bay, and has been identified with the lumber business all his life. He is also associated with the Tomiko Lumber Co., the Searchmont Lumber Co., the Gordon Development Co. of B. C., and other organizations and has offices at North Bay and in the Bank of Hamilton Building, Toronto.

The mill was erected at Callander about twenty years ago by James McBurney, of North Bay, who is now in his eighty-fifth year, and accompanied the retail lumbermen of Ontario on their recent visit to Callander. After Mr. McBurney had conducted the mill for some years it passed into the hands of Thomas Darling & Son. In 1915, the property was purchased by A. B. Gordon, who has operated it sucessfully every season since that time. The equipment consists of a double cutting Waterous band mill and a Jumbo edger, with the usual accompaniment of trimmers, slashers, etc. The daily output is about 50,000 feet of white and red pine, and the average annual cut is around 8,000,000 feet. There is also a lath department, with a yearly production of about 4,000,000 pieces. Since Mr. Gordon acquired the property he has expended considerable money in remodelling it and increasing the facilities and output, paying special attention to the power plant, which consists of three boilers and a 250 horse power engine.

There is excellent shipping accommodation by the G. T. R., and the location of the plant on Lake Nipissing is a convenient one. The fire protection appliances are of the best and a fire pump, purchased

The plant and portion of the yards at J. B. Smith & Sons, Callander, Ont.

some years ago from the town of North Bay is installed. D. A. Glenn is manager of the office, D. J. MacDonald looks after the operation of the mill, and J. J. McDonald has charge of the yards, which are well laid out and ample for all purposes. The attractive summer home of Mr. Gordon is situated on Lake Nipissing, a few miles from the town, and there he spends several weeks every summer.

John B. Smith & Sons' Activities

The firm of John B. Smith & Sons, Limited, is a historic one and has been engaged in the lumber and woodworking business since 1851, having started on Niagara St., Toronto. Since 1889 the large plant and retail yards have been located at the corner of Strachan and Wellington Aves., while another yard is at the corner of Dundas St. West and St. Helen's Ave., Toronto. The area of the Toronto yards is 15 acres. Wm. J. Smith is the president of the company and the directors are Robert Smith, W. J. Smith, James H. Smith, G. Larratt Smith. The veteran founder of the business, J. B. Smith, passed away in 1894.

The organization handles white pine, yellow pine, oak, ash, birch, hemlock, maple, cherry, cypress, walnut, cedar, whitewood and mahogany, and turns out doors, sash, flooring, mouldings, columns, store and office fittings, tanks, silos and all kinds of interior finish.

The illustration in another column gives a good idea of No. 2 mill of the company, the use of No. 1 mill, which was erected over 30 years ago, at Callander, Ont., having ceased. No. 2 mill was built about 14 years ago at Callander and is splendidly equipped and well laid out. It has an overhead filing room, closed burner, sorting platform and tracks leading out from the platform to the yards.

Commencing with the machinery in the filing room, there is a Wm. Hamilton roller for the band saws, a large grinder, a lap grinder, Hanchett circular grinder for the gang saws and a small engine to drive the filing machinery.

The engine room is equipped with one 350 h.p. Wheelock engine for the sawmill and a smaller engine, about 150 h.p. for the lath mill. There is one pump, (Canada Foundry Co., Toronto), to pump the water to the heater in the boiler room and also to pump water, to a large outside tank, the outside tank being piped to different houses, giving a very convenient supply of water in the village. A separate pump takes the water from the heater in the boiler room to five boilers which are heated by Dutch ovens.

The sawmill proper is equipped with two Wm. Hamilton eight-foot band mills, double cutting, 12 in. saws; two Kendall niggers and kickers, and two Wm. Hamilton edgers, of four saws each; one Ken-

Hon. George Gordon, North Bay, Ont.

Alex. B. Gordon, Callander, Ont.

A. J. Young, North Bay, Ont.

dall gang and Wm. Hamilton slash table and trimmers. The lath mill has two lath machines, Wm. Hamilton manufacture, one bolter, (Payette, Penetang), and trimmer saws.

The average capacity of the sawmill is 200,000 ft. for twenty hours, the lath mill 120,000 pieces for the same period. The season's cut generally runs from 20,000,000 ft. to 22,000,000 ft. The lumber sawn is principally red and white pine, and the company have extensive limits which assure an ample supply of timber for many years to come. A number of camps are operated during the fall and winter and all the logs are towed to the mill by various water routes.

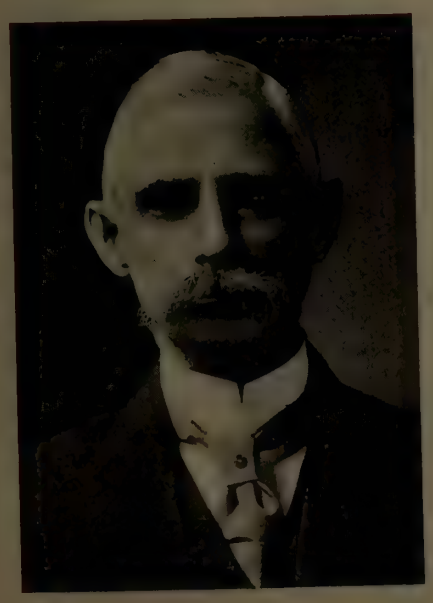
The yard and shipping facilities are among the best in the province of Ontario. There are about eight miles of siding in the yard connecting with the G. T. R. at Callander and the C. P. R. at Nipissing Junction, giving a piling room for 30,000,000 ft. without the necessity of back-piling. There are two locomotives, one to draw the lumber from the mill to the piles and another to attend to shipping and delivering to the two railways. Both locomotives have fire-fighting appliances and the supply of water is ample. Besides several wells there is a creek running through the centre of the yard for nearly half its length. The land on all sides is cleared and largely cultivated. James H. Smith, secretary-treasurer of the company, supervises the operations of the plant at Callander, where he has a cosy summer home, at which a splendid repast was tendered the visiting retail dealers.

The Operation at Trout Mills

Wm. Milne & Sons, Limited, who operate a busy sawmill at Trout Mills, three miles east of North Bay, Ont., are an old-established lumber firm. Wm. Milne, the veteran head of the concern, has long been a resident of the progressive northern town of which he is a former Mayor and leading citizen. Associated with him are his two sons, Fred Milne, who has charge of the sawmill operations, and Lieut.-Col. W. H. Milne, who looks after the logging end.

Mr. Milne, Sr., first operated a mill at Ethel in Huron County, and later established a plant at Trout Creek, which he disposed of after six or seven years. He built a mill at Milnet on the Canadian National Railway, and bought another at Spanish. The one at Milnet, he sold to the Marshay Lumber Co. a couple of years ago, while the mill at Spanish, which was burned and later rebuilt, was disposed of last year to Graham & Shannon. A small mill was built at Trout Mills in 1901, and this has been greatly extended during recent years until it has reached its present proportions, being the first plant established on the T. & N. O. railway. Its capacity is about 45,000 feet a day, consisting of white pine, birch, spruce, balsam, basswood and elm. About 85 per cent. of the annual cut is white pine, a number of deals being turned out for export. This year about half a million feet of birch was sawn. The equipment consists of one Waterous double-cut 8-foot band mill, with 12 inch steam feed and steam set Waterous carriage, Waterous double edger, and Payette lath bolter and machine. The production of lath each season is over 3,000,000 pieces, and the total annual cut of lumber averages about 7,000,000 feet.

The logs which the company are securing from Notman township, were the finest specimens seen by the lumber retailers on their recent trip to the north. Some of them were three feet in diameter. The logs are brought in by rail, a distance of 26 miles, on the T. &



Wm. Milne, North Bay, Ont.

Lt.-Col. W. H. Milne, North Bay, Ont.

Fred Milne, North Bay, Ont.

N. O. line, and Trout Lake affords splendid facilities for handling them.

The power plant consists of three boilers of 100 h.p. each, two of them being Goldie & McCulloch. These are fed by Dutch ovens, and a Climax engine of adequate horse power drives the mill machinery.

One feature about the mill is that it has no burner. All the refuse in the way of slabs and edging is profitably disposed of in North Bay, the demand for this wood being exceptionally active, while the trimmer ends, 12 in. long and up, are cut and trimmed

The sawmill of Wm. Milne & Sons, at Trout Lake, three miles from North Bay. On the extreme left the shingle plant can be seen

for box-wood, for which a ready sale is found. All sawdust is used for extending the yard room.

In connection with this progressive plant there is a shingle mill, in a separate building, which is equipped with one Mowry shingle machine, and has a capacity of 20,000 shingles a day. The yards of the company are well laid out and the head office is at North Bay.

Both of Mr. Milne's sons have been associated with him in the business for some years. The younger, Lieut.-Col. W. H. Milne, service with distinction in the Canadian Forestry Corps in France, and has long taken an active interest in military matters. He enlisted with the 159th (Northern) Battalion for overseas service in February, 1916, and reverted to captain in order to get over to France. In March, 1917, he was transferred to the Canadian Forestry Unit, and two months later promoted to the rank of Major. A year later

The well equipped mill of George Gordon & Co., at Cache Bay, Ont.

he became a Lieut.-Colonel, and, after the strife in Europe terminated, he returned to Scotland, where certain forestry operations were carried out until May, 1919, when he returned home and resumed his association with the firm. Lieut.-Col. Milne was connected with No. 6 district in the Vosges Mountains, France, and had charge of three sawmills. Of the practical nature and progressive character of his work with the Forestry Corps, little need be said as it is well known among all Canadian foresters and lumbermen. It may, however, be mentioned that there was designed and constructed under the supervision of Lieut.-Col. Milne in the Vosges region, a gravity railway of 4,900 feet long with a drop of 600 feet. This was laid with 24 lb. rails, the track being of three feet gauge. The line was operated with ordinary hoists and an air-breaking device,—all carried out by the 69th Company, C. F. C. Lieut.-Col. Milne was also identified with the 28th Company, C. F. C., which built the first sawmill in the Vosges district. The plant was completed and in operation within eighteen days, constituting a record in construction.

The Mills at Cache Bay

The plant of George Gordon & Co., Ltd., Cache Bay, which is twenty-eight miles northwest from North Bay, was established in 1900 and has a daily capacity of about 125,000 ft., principally of white and red pine. The sawmill is 175 x 56 ft. and the planing mill 80 x 40 ft. The former is equipped with two double-cut Waterous band saws, one horizontal Diamond band resaw, one Diamond edger, one Mowry & Sons' Jumbo edger, as well as Waterous trimmers, slash table, etc.

There is a busy lath and picket department with two bolters and one lath machine of Payette & Co. and one picket machine and picket trimmers. The power plant of the sawmill is ample for all purposes and has one 500 h. p. Corliss engine and a 250 h.p. slide valve engine, as well as six boilers, four being 72 in. x 18 ft., and the remainder 66 in. x 18 ft.

The yard room of the mill is sufficiently extended for storing about 25,000,000 feet. There are no trams in the yard, the lumber being piled from high cars. The company have their own locomotive for handling green lumber and also for shunting cars for shipping.

Part of the regularly laid out piles and one of the aisles of J. B. Smith & Sons' lumber yard at Callander, Ont.

All shipments are made by rail and the output of the plant is marketed through wholesalers.

The company have a brick boiler-house in connection with their dynamo room, which has two boilers that supply power to the machine shop and a dynamo also heat the company's office, store ,and the residence of Mr. B. Bain, superintendent. The boiler-house is 48 ft. x 56 ft., the engine room 50 ft. x 40 ft., both being solid brick, while the machine shop and dynamo room is 50 ft. x 65 t. and the locomotive house 120 ft. x 30 ft. The company also own and operate a large fire pump, 24 in. steam and 12 in. intake. The officers of George Gordon & Co. are Hon. George Gordon, president and managing director, (who has his office in North Bay), H. J. Bartlett, vice-president of the company, and S. P. Boland, secretary-treasurer.

The mill possesses a number of economic features in operation, is well laid out and nicely painted, while everything in and around this progressive Cache Bay industry is kept in fine shape. The location of the plant is an ideal one and the town is progressive, admirably lighted and contains comfortable homes and a contented, happy and industrious people.

Hon. George Gordon, the head of the firm, has an office in North Bay, where he resides. He has been prominently identified with the lumber industry all his life and is a progressive, public-spirited Canadian. Senator Gordon was born in Pakenham, Ont., in 1865, and educated at the Pembroke public and high schools. He is a director of several lumber companies.

Trade is One Thing and Patriotism Another

The Canadian Has Deep Rooted Feeling of His Inalienable Right to Buy In Whatever Market Affords Him the Best Value, Says Correspondent

Editor "Canada Lumberman":—

Your editorial under the above heading in the issue of August 15th, opens up economic considerations of widespread interest, which, particularly at this time, when we hear so much of Canada, having through her part in the great war, attained nationhood—are deserving of careful study, not only by our manufacturers, not only by the lumber trade to which your editorial is addressed, but by every thinking citizen of this country. Our need is for definite ideas all the way round.

Our patriotism is like our religion—largely sentimental, and is almost altogether overlooked in practice. So that while the sentiment of the Canadian people undoubtedly shouts "Yes" to the question "Shall we buy Made in Canada goods? and "Shall we continue to protect Canadian manufacturers?" their effective action decidedly negatives the "Shouts" of sentimental enthusiasm. The "breathes there a man with soul so dead" idea works overtime just now at political gatherings, and we are all Canadians first in sentiment but, when it comes down to spending money the average Canadian, being human, buys Made-in-Canada goods only at an even break, and whatever his nationalistic sentiments may be, he has the deep-rooted feeling of his inalienable right to purchase in whatever market affords him the best value in quantity and quality for his outlay.

The opposite feeling of inherent right naturally is found in the mind of the seller. For him the home market is the ideal one, providing his particular commodity commands as high a price there as elsewhere. Otherwise, it may be South Africa, it may be the Fiji Islands or any other uttermost part of the earth, determined altogether by the greatest value in exchange which he can realize. This is elementary. Commodities naturally tend to move from where they are relatively cheap to where they are relatively dear, and freedom of trade means more and more the elimination of obstacles to this natural movement. Thus trade is one thing and patriotism is something else.

In your editorial, the thought is implied that trade and patriotism should effect a reconciliation or have such reconciliation effected for them. Let us see. So long as "buy cheap and sell dear" is our motto, we have no cause for complaint. If we insist on our right, we must in reason allow the right of the manufacturer also, and refrain from subjecting him to sentimental patriotic restrictions, to which we have no intention of submitting ourselves. As an illustration, a farmer selects his merchantable potatoes for "export to the city market," saving the small and scrubby ones for his home consumption. The position means in effect our saying to the farmer, "See here, these your potatoes are offered to us at an exorbitant price out of all proportion to the cost of production. Henceforth and hereafter, you are to supply us with spuds at a fixed margin over what it costs to produce them and you are to notified accordingly herewith."

We can imagine that the reply though perhaps unprintable would be short and to the point. The fact is that we have been overlooking another elementary economic principle—that value is one thing and price is again something else, value being determined by cost of production and price by supply and demand. So far the manufacturer seems to have the best of the argument.

Now about a protective tariff? Funds are necessary for carrying on of Government—and this is one object, whether greater or smaller, in relation to the matter of protecting industries being in a accordance with our political faith.

Here, it seems, is a point where trade and patriotism come in contact. That we may grow to be a great country, we want industries to provide employment for an ever-increasing population. Cities compete for factories by offering exemption from taxes for a period of years—free sites, water supply, and so on. The city wants this particular industry to establish its plant within its borders, not for the plant itself as an addition to scenic effects, but for the increase in population which it will bring, furthering the ambition that we shall become the industrial metropolis of our section.

This desire (we do not go into a discussion of its merits) or ambition, is naturally betimes taken advantage of by the manufacturing interests to obtain concessions as above noted in exchange for locating at a certain point. This procedure, however, can hardly be taken exception to—a city wants something—pays for it and gets it, and a country does the same. As the city desiring increased population, grants a free site and exemption from taxes as an inducement for a manufacturer to establish his plant within its borders, so a country, by a protective tariff, which prohibits to a large extent the importation of a given commodity, offers a like inducement for the establishment of industries within the limits of its territory. The motive is not cheaper commodities but greater population—considered either from the civic or national viewpoint.

Now then, we as a country wanted this industry to establish here and have paid the price of protection—we have the industry, but it seems that we are growing dissatisfied with our bargain. If protection is no longer needed, if the period for which exemption from taxes was allowed has expired, adjustments may and must be made—but to say to any manufacturer, "You must see that the home market is supplied first"—is to use the language of childhood.

"Markets," which means "effective demand," are created by circumstances over which the manufacturer has no control and, given that effective demand in the home market, the same will naturally and necessarily be taken care of first. Let us be consistent.. Our patriotism was great enough to allow concessions in orders to secure the industries we wanted; we have them—they have brought us the additional population we desired, then why should we now quarrel over the terms of sale?

More than anything else, we should be very careful that we do not insist that the "home price" shall be based on the cost of production—in the sense of a fixed margin above that cost. Notwithstanding the decision of the Methodist Conference at Hamilton, this is a principle which, in application, would be subversive of freedom in far-reaching directions. Prices of commodities are determined by world conditions and are subject only within narrow limits to artificial manipulation as noted in the case of one of our Lumber Association's price lists, which has been described, not as representing so much the selling price of lumber as what the manufacturers would lie to get for it.

So long as any industry is not controlled by a monopoly or combine, competition between its members will keep prices at their proper level. In that direction lies the proper sphere of governmental regulation in keeping the channels clear of obstruction for the natural movements of trade. In the other direction of price-fixing,—margin over cost of production,—lies state socialism—the condition which Herbert Spencer predicted many years ago as the "coming slavery," which would be brought on themselves by those who are undeserving of free institutions. Shall we help or hinder its advent?

Yours, etc.,

C. J. BROOKS.

Toronto, Aug. 21st, 1920.

Settling Disputes—Fulfilling Contracts

Resolutions in the matter of settling disputes by arbitration and on the carrying out of contracts were recently adopted by the Long Island Lumber Dealers' Association in New York State. They will be read with interest and it is hoped profit by many sister organizations. The resolutions are:

Whereas, the honest fulfillment of contracts is essential to the stability of business relations and to the welfare of the entire building material industry, and

Whereas, the Long Island Dealers Association has insisted and does insist upon the fulfillment of orders on a rising market and,

Whereas, manufacturers and wholesalers of building material have generally fulfilled orders as accepted,

Be it resolved, that the Long Island Dealers' Association pledge its members to the fullfillment of all orders as given and accepted. If any member shall be reported as cancelling an order without good reason and purely because of market decline the circumstances shall be reported to the Arbitration Committee, and the Arbitration Committee shall in its discretion recommend that the name of such member be dropped from the rolls of the Association.

Be it resolved, that the Long Island Dealers' Association endorse the principle of arbitration in all disputes between buyer and seller and recommend that the respective State Associations provide definite machinery for the enforcement of such principle.

Lumberjack Never as Well Fixed as To-day

Yet He Jumps from Camp to Camp When He Should Get Busy and Produce—Shanty Life of Thirty Years Ago and What is Provided Now for Men

By "The Onlooker"

Important Meeting of Lumberers in 1858.

A special general meeting of the lumberers of the Ottawa and its tributaries, was held agreeable to a Public Requisition at Armstrong's Union Hotel on Saturday, January 9th, 1858, at 4 o'clock p.m., in Ottawa.

On motion J. Aumond took the chair, and T. Spence was requested to act as secretary.

The secretary having read the minutes of the last meeting, the chairman then briefly explained the object of this meeting, which was principally to arrange for the constituting of a "Board of Lumberers" and to appoint a committee to take the necessary steps in making application to Parliament at its first sitting.

Present: J. Aumond, J. Doyle per J. Egan's estate, R. Conroy, J. Skead, C. Hudson, John Dunlop, George Aird, Coll. McDonnell, Richard McConnell, Peter Aleyn, John Foran, D. McLachlin, Alex. McLaren, and others.

Moved by Mr. Conroy, seconded by Mr. McConnell.

That this meeting being of the opinion that the organization of a "Board of Lumberers" is of paramount importance to all interested in the lumber trade of the Ottawa, do hereby resolve that application be made to the Legislative Assembly of this Province, at its next session for an act of incorporation, whereby the said trade may be managed by such board, as to be constituted in the manner as may best conduce to the interests of all engaged and interested therein.—Carried.

Moved by D. McLachlin, seconded by J. Skead.—That with the view of carrying into practical execution the foregoing resolution, the following gentlemen be named as a committee to take all the necessary initiative steps for obtaining the said Act of Incorporation, or if found necessary, an amendment of the Ottawa Board of Trade, and that the member for Renfrew, together wtih the Hon. P. M. Vankoughnet, be requested to take charge of such bill (as may be framed) in its passage through the House of Assembly and Legislative Council, said committee to be composed of Messrs. Allan Gilmour, James Skead, G. and J. J. Harris, J. Supple, Geo. Bryson,, D. McLachlan, R. McConnell, James Doyle, R. Conroy, C. McDonnell.

Any three of the above-named gentlemen to form a quorum.

Moved by Mr. R. McConnell, seconded by Mr. J. Dunlop: That the quorum shall submit their proceedings before a general meeting, previous to the same being presented before the legislature.—Carried.

Moved by Mr. McLachlin, seconded by Mr. George Aird: That this meeting do resolve to form a fund by private subscription, to defray the expenses incurred in carrying out the requirements of the former resolutions, and that a list be now opened for the purpose; and that Messrs. James Skead, R. Conroy and Geo. Aird be a committee to call on all lumbermen to subscribe thereto.—Carried.

Moved by Mr. C. McDonnell, seconded by Mr. J. Doyle: That the synopsis of the rules and regulations now laid before this meeting for the future guidance of the Board of Lumberers, seem to this meeting fair and equitable, but this meeting representing, but a limited portion of persons engaged in the trade, consider that it would be premature to pledge the whole trade, to their adoption at this time; therefore refrain from doing so; but would suggest that as soon as the said board can act under Act of Incorporation, that a large meeting of all interested, directly and indirectly, shall be convened, when such rules and regulations could be considered and adopted, as would seem most judicious and advisable.—Carried.

Moved by Mr. Dunlop, seconded by Mr. Conroy: That all those who have not yet sent in to the hiring office their return of men employed, in reply to circular issued November 21st last, are requested to do so without delay in order that the blank certificates may be furnished to employers, previous to their paying any of their operatives off; and this meeting do trust that, for the general welfare of the trade that said certifiicates may be filled up and handed to the operative without any partiality whatever being shewn; and, further, that the nature and benefits of said certificates be clearly explained to the operative, and the necessity of their carefully preserving the same.—Carried.

Moved by Mr. J. Skead, seconded by Mr. Conroy, and resolved:. That a copy of the said resolutions be published in the Aylmer Times, By Town Gazette, Ottawa Citizen, Ottawa Tribune, Quebec Chronicle and Pembroke Observer.—Carried.

Moved by Mr. Conroy, seconded by Mr. J. Doyle: That Mr. Joseph Aumond, Esq., do leave the chair and D. McLachlin, Esq., be called thereto.

Moved by Mr. Doyle, and seconded by Mr. Skead: That the thanks of this meeting be given to J. Aumond, for his dignified conduct while in the chair.

Signed,

Thomas Spence, Sec'y. J. Aumond, Chairman.

The foregoing is a record of the minutes of what was probably the first meeting of lumbermen ever held in Canada. The gathering took place in Ottawa sixty-two years ago and all who then attended have passed to the great beyond.

The document is among the archives of Frank Hawkins of Ottawa, secretary of the Canadian Lumbermen's Association, who guards it as one of his most treasured possessions.

What a contrast with present-day conditions and the regulation of the roving, restless lumberjack of 1920. This first meeting made history for the Ottawa Valley lumbermen and years after had its effect on the general labor situation.

Take thirty years ago and all camps were pretty much the same with the same variety of food, but today, and even within the last five years there has been a vast difference, both as to food, camp conditions, protection for the men, and a general benefit all around for the workers. It costs the compaies more money, but even so the production is not there, and that is what counts.

Gone Are Old "Square" Timber Days.

In lumbering operations of the last forty years there has been a great change throughout the Valley. The old "square" timber days are gone, with their picturesqueness and real old camp life—which meant production. It is recalled within the memory of old lumber operators, that the passing of the last "square" timber raft through Ottawa, which was owned by William Mackie, some twenty years ago, stamped the beginning of a new era, not only in the form of logs taken out but in camp life as well. With the introduction of other modes of operation the camp life changed, and it is freely referred to that with the "square" timber production, "pork and beans" went too." To-day the men in the camps are no longer satisfied to live on such frugal though healthy fare.

All around camp conditions have changed. For instance, the workers in the bush now have the benefits of improved sanitation and of the Lumbermen's Safety Association. The latter to the general publis is looked at and passed over with a glance, but it means a whole lot to the lumber trade. In the winter months the inspectors go through the camps and in the summer months go over the mills, on the lookout for undesirable conditions and recommending for their improvement or elimination. In the old days "Safety First" was unheard of. Now it plays a big part in camp life and casts a serious responsibility on the operators. Then, again, there is the protection of the Workmen's Compensation Act, which lends further protection to the employee in the event of his being injured. A Safety Association or the Workmen's Compensation Act does not mean much to the general public, particularly if the public is buying lumber.

The public in general never heard of such bodies or if it did forgot them. But they cost the lumberman real money, which in turn is part of his operating expenses and has to be charged up at so much per M. when anybody buys lumber. Around a quarter of a million dollars was provided last year by lumbering companies for the Workmen's Compensation Act, The larger companies bore the major portion of the expense, as the general ratio is three per cent. of the payroll. This three per cent. does not simply mean the guaranteeing of money in proportion to the payroll. It is a payment direct to the Government, and, if say, John Jones has a payroll of $100,000, he pays $3,000 as his share. Jimmie Smith on the other side of the creek may only have a payroll of $10,000. He pays $300. But the employees of Jimmie Smith may run into more accidents than the men of John Jones, and John Jones has got to pay proportionately for them. It is a case of the big fellow looking after the smaller chap to his own disadvantage and loss. Naturally the big fellow learns by being "tapped," and thus he is about the first to appreciate the benefits of a Safety Association, with its object for the prevention of accidents, which in turn, means the reduction of further claims upon him under the Workmen's Compensation Act.

During the season of 1918-19 the claims were high, but it is expected that this and next year the percentage will be reduced and a more favorable balance obtained. The inspectors of the Safety Association look out for the general health of the camps as well as for possible means of avoiding accidents. In many camps the old "spitting box" has been eliminated, to the general benefit of the health of the camp workers.

The Grub and Lodging of 30 Years Ago.

Thirty years ago the men slept in the same building where they ate, with the camboose in the centre. They lived largely on pork and beans and bread. They slept mostly in the same blankets, year after year. Tea was then purchased by the men and cost them about ninety cents per pound. Nowdays tea is furnished to them free, and, in addition in the modern camps, the employees are provided with a menu that compares favorably with that of a large hotel. In some cases the food supplied by the companies is spoiled by the cook, but once this situation arises it is soon curbed and a new and more efficient cook put into the camp. All kinds of jams, several dried fruits, green cabbage, all kinds of pickles, fresh beef, the best of butter, potatoes, beans, pork, bacon, sausages, mincemeat, and in fact everything that goes to make up a healthful diet is provided for the men. The sleeping quarters of the men are in some of the camps of the bigger companies scrubbed as often as four times per week. The men do their own washing, and for the purposes of entertainment bring into the camp such musical instruments as they desire. The rule, "lights out," goes into effect and is enforced at nine p.m. On Saturday nights the men are given greater latitude. The best of blankets are furnished and nearly every year they are renewed, the old ones being used for horse covers.

Then, too, the facilities for purchasing what were in the old days considered "luxuries," have been improved. Now it is possible for the men to purchase pipes, cigarettes, tobacco, checkers, gum, etc., as their fancy wills, and they can also get clothing. The store is kept in the camp van, and the worker can almost buy anything he wants. Thirty years ago, the workers were tied down to the purchasing of only necessities, and in many cases if anybody wanted anything "fancy," they had to carry it in on their back at the start of the season. The lumbering companies do not operate the "van" or "store" for the purpose of making a profit but for the benefit that it gives to the men and to try to assist in making them more contented.

Safeguarding the Health of the Men.

Besides a qualified physician visits the camps once a month. In case of accident or sickness if a physician cannot be obtained provision is made for first aid treatment. Another important point is the obtaining of the advice of a medical practitioner before the camp is laid out. He looks after the water supply, location, etc., and as the season's operations progress the results of his efforts, knowledge and experience are shown.

In the early part of the camp operations live cattle are driven into the camps to furnish fresh meat, and later on frozen beef is sent in. Furthermore, several of the operators have of late years adopted the practise of establishing farms which contain a large number of well bred pigs.

When the camp is established, Mr. Pig, for the first part, is taken care of and fed. Later as he grows in size he is permitted to roam through the wilds with his mother. Soon he becomes accustomed to the forest life, and goes entirely away from the camp, not paying any attention to it, until the cold weather sets in or all of the nuts and roots he lives on, have become exhausted. Then he comes back to camp in the finest and sweetest of shape, and is further fed and fattened. As fresh pork is required for camp use the hogs are killed and the men get the best of pork, which the head of a well known lumber company described as being "even sweeter than turkey or chicken."

Taken all around the woodsman, today with the wages he is getting, and the food he is having provided for his livelihood, should be grateful that he is alive, instead of turning around and jumping from camp to camp, and get busy and produce, and if he considers himself as good stock, turn around and play the game squarely, as his sires did decades ago. Meanwhile let the public have an idea about the price of lumber. It's production that's wanted.

Main Factors Entering into Building of Home

Standardization of Parts and Cutting Material to Size are Principles General Public is Being Educated to Adopt—Time and Labor Elements

By L. R. Wright

The three main factors entering into the construction of a home are time, labor and material. It is claimed that these items may be conserved by having all the lumber items for a house cut to accurate sizes at the mill or factory as embodied in the ready-cut method of house-building. The principles involved, viz., the standardization of parts and the cutting to size and machining of all pieces at the factory, are not new, as they have been employed in steel construction work for many years. It is more a question of adapting these principles to wood construction and educating the general public to the saving and advantages that may be effected by their adoption.

The ready-cut method should not be confused with the portable or sectional house idea. The two are entirely dissimilar in construction. In sectional or portable housework, the house is built up in sections which are nailed together at the factory. The sections are shipped out and assembled and bolted together on the site. In the ready-cut house idea each piece is cut to size and length, and bevelled or notched, as required, at the factory. The carpenter does not have any cutting or fitting to do, but simply follows instructions and assembles the pieces as directed. In appearance and construction the ready-cut house does not differ from the type of building regularly adapted for residential purposes. Ready-cut houses may be built in all wood, brick veneer, stucco and wood or brick and wood.

The Canadian Aladdin Co., Limited, with head offices at Toronto, Ont., recently completed the first unit of the large factory that they are constructing at Peterboro, Ont., for manufacturing ready-cut houses. In addition to the Peterboro plant, this company operates branches at St. John, N.B., Brantford and Guelph, Ont., and Vancouver, B. C. The new factory is a modern, up-to-date, woodworking plant, equipped wifh the latest labor-saving production machines.

The first unit is a one-storey building, 100 x 200, of frame construction, with heavy concrete floors. The ceiling is high and the whole floor well lighted by a bountiful supply of natural light. The equipment is well spaced so that a large volume of work may be put through without over-crowding or confusion.

Location is Excellent One

The site consists of about 13 acres with excellent trackage facilities. A siding, 600 ft. long, runs through the porperty and gives connection with the C. P. R. and C. N. Rys. The factory is located along one side of this track and a large warehouse is to extend along the other side. The siding also facilitates the handling of the lumber and other material.

Electricity is the motive power employed, both an individual and group drive being used. A steam plant has been installed to heat the factory and dry kilns. The refuse from the factory, which is conveyed by a Sheldon shavings exhaust system to a large concrete vault in the boiler house, will be used as fuel. The dry kiln, which adjoins the boiler house, is a single-compartment, progressive type kiln, 20 ft. x 40 ft., and was installed by Sheldons, Limited, of Galt, Ont. This is a general-purpose kiln and may be used for both hard and soft woods.

A large number of what might be termed "standard plans," have been prepared covering a wide selection of houses and bungalows,

and ranging from the humble summer cottage to the more protentious permanent residence. A saving may be effected by working to one of the standard designs, but it requires special plans to be worked up to suit the requirements of the purchaser. In this case a small extra charge is made to cover cost of drawing the plans and working out the details.

Each Piece or Group is Numbered

The Engineering Department prepares these plans and also prepares detailed drawings, showing the size and other particulars of each individual item entering into the construction of the house. Each piece or group of similar pieces is numbered or otherwise identified. From these detailed drawings a list of material is made up which accompanies the drawings to the factory. Smaller lists are then prepared and given to the stock cutters and others who are responsible for preparing the material. As each item on the smaller lists is got out, it is bundled and the house or design number, quantity and size of pieces and identification number or name is plainly marked. Each item is picked off as got out. The material for each house is kept separate. Thus all confusion and errors are avoided.

The material is all worked to very accurate sizes. Such items as joists, 2 x 4's, etc., are dressed to standard sizes so that all calculations will work out correctly. Steel tapes, jigs and gauges of different kinds are used to insure absolute accuracy. The framing, jack rafters, siding, flooring and other items are cut to sizes and bevelled, if required. The only material that is sent out in random lengths is baseboards, picture mould and similar mouldings which, owing to the variation in thickness of the plaster, could not be cut to fit. When the ready-cut material arrives on the job, the work of the carpenters is all laid out for them. They simply have to consult the blueprints and directions, which are furnished, select the material as designated by the numbers or other identification marks, and begin the erection of the building. Everything is planned and prepared for them. Thus there is no time lost making calculations, measuring, laying out work, sawing, fitting, etc. The building operations become merely a matter of following instructions and assembling the ready-cut material.

The capacity of the new plant is two complete houses a day. With the installation of four additional swing saws, the output can be increased to four houses. This form of construction is also applied to garages, barns, stores, in fact to all kinds of buildings.

Value of Timber Cut from Live and Dead Trees

Prejudice exists in certain quarters against the use of timber cut from dead trees, and some purchase specifications insist that only timber cut from live trees will be acceptable. As a matter of fact, when sound dead trees are sawed into lumber, and the weathered or charged outside is cut away, there is no method known to the Forest Products Laboratory by which the lumber can be distinguished from that cut from live trees, except that the lumber from dead trees may be partly seasoned when sawed.

All the information available at the laboratory indicates that timber cut from insect or fire-killed trees is just as good for any structural purpose as that cut from live trees of similar quality, providing the wood has not been subsequently injured by decay or further insect attack. If a tree stands on the stump too long after it is killed, the sapwood is likely to become decayed or badly infested by wood-boring insects; and in time the heartwood also will be similarly affected. The same thing is true of logs cut from live trees and not properly cared for. Until the wood becomes affected by these destructive agents, dead tree wood should be just as strong and just as durable as sound live tree wood.

In considering the subject it may be useful to remember that the heartwood of a living tree is entirely dead, and in the sapwood only a comparatively few cells are dead. Most of the wood cut from trees is dead, therefore, regardless of whether the tree itself is living or not. Such being the case, purchase specifications, instead of providing that material must not be from dead trees, should state that material showing evidence of decay or insect infestation exceeding a specified limit will not be accepted.

Only Slight Difference in House Building

The increase in railroad freight rates authorized by the Interstate Commerce Commission will add slightly to the value of lumber to the consumer and the home builder. The increase varies for different regions, and it is estimated that it will average approximately 33 1/3 per cent., so far as lumber is concerned. That means the addition of one-third to the cost of transportation, but since such expense is but a relatively small part of the total value of lumber which goes into a house it is not to be expected that it will materially affect the building of homes, says a Chicago despatch.

Lumber weighs anywhere from 2,000 to 3,500 pounds per thousand feet, according to the kind of wood and its degree of dryness. Much of the yellow pine coming into Chicago takes a rate of 32½ cents per hundred pounds, so, in the case of lumber weighing, say, 2,800 pounds per thousand feet, the transportation cost amounts to $9.10 per thousand. Douglas fir shipped from the Pacific Northwest to Chicago is hauled by the railroads at a charge of 60 cents per hundred pounds, so that the freight charges on a thousand feet of Douglas fir weighing, say 2,500 pounds, would amount to $15. An increase of 33 1/3 per cent. in the freight rate means adding about $3 to the cost of transporting yellow pine from the South to Chicago and $5 to the cost of Douglas fir from Oregon and Washington points to Chicago.

With yellow pine lumber selling at $70 per thousand feet the old rate of transportation of $9.10 per thousand feet formed 13 per cent. of the total value. Under the new rate the cost of the railroad haul will be about 17 per cent. of the value. In the case of Douglas fir selling in Chicago at $70 per thousand feet the old freight charges formed 21 per cent. of the value, while under the increased rate the freight haul will form 29 per cent.

The figures given apply to Chicago only, but they are illustrative in a general way to all sections of the country. The man who is going to build himself a home and who may use a total of twenty thousand feet of lumber in its construction, is not going to let the increase in the value of lumber due to the advance in the cost of transportation, deter him from carrying out his purpose. The added investment on twenty thousand feet of lumber would mean to the man in Chicago buying yellow pine but $60. On a house costing $5,000 to build the increase of $60 amounts to 1.2 per cent. Lumbermen generally do not believe that the home building movement of the country will lag by reason of the slight increase in the investment due to the coming advance in the cost of hauling building materials.

An Aggressive Eastern Lumberman

Louis Rolland, Montreal

Louis Rolland, who recently commenced business as a wholesale lumber dealer under the title of "The Rolland Lumber Company, Limited," 62 St. James Street, Montreal, was born in 1888. After completing his education, he took up, in 1905, a position with his father in the Rolland Paper Company, Limited, where he was employed, starting in the shipping department, and resigning his position in July, 1910, when he occupied the position as assistant to the sales manager. Resigning from the Rolland Paper Company, Limited, he took a position with the Standard Mills Company, which was subsequently bought by the Seaman, Kent Company, Limited, of Meaford, Ont., and stayed with the latter company as manager of their Montreal branch until the spring of 1911. Early in the same year, he went with the Georgian Bay Shook Mills, Limited, of Midland, Ont., and remained with them until the end of 1913, representing them in various territories and securing a large amount of business.

He resigned from this connection to start in business for himself in 1913, when Louis S. Rolland & Company was registered, Mr. W. S. Blair being also interested; and in December, 1914, the firm of Blair & Rolland, Limited, was incorporated. At the termination of the year 1919 Mr. Rolland resigned his position with his late associates and left almost immediately for England and the Continent as representative of one of the largest import, export and banking houses.

Upon Mr. Rolland's return to Canada, and upon completing his work with this organization in June last, he incorporated his present company, The Rolland Lumber Company, Limited. The endeavors of the Rolland Lumber Company will be mainly exerted in the export business, the stock dealt in consisting of spruce and white pine. The stocks carried which are not exportable are disposed of on the local and American markets. Already some very healthy business has been concluded with the various connections abroad.

Eastern Lumber Firm Sues Big Loss

A disastrous fire, which consumed property estimated to be worth $300,000, broke out recently in the lumber yard of the Edward Sinclair Lumber Company, about three miles from Newcastle, N.B.

About 4,000,000 feet of boards, deals and logs were consumed, as well as four houses belonging to the company. The loss is partly covered by insurance.

Value of Greater Co-operation in Business

Education and propaganda are accomplishing more in the open field than could even have been accomplished by the methods of secrecy. The world needs Trade Associations of the right kind and progressive men are anxious to affiliate with their trade organizations because they realize the value of it to them and because they want to assist their competitors and make better business men out of them. What the good association member does for the trade.

By Charles A. Bowen, Detroit., Secretary of National Retail Lumber Dealers' Association

Charles A. Bowen, Detroit, Mich.

There are still some men who what the general conditions which are surrounding business today indicate the value of a greater cooperation between men in the different lines of business than ever before.

There are still some men who question the value of organization, but these are very much in the minority and the Association effort is growing greater and larger each year. Trade and Industrial Associations which exist in practically every one of commercial endeavor today, find their logical basis for existence in three self-evident facts.

One is unity in any line of business means strength to the individual; the second is, that accumulation of individual strength means power to the Association, and the third is, that intelligent direction in the use of such power means inevitable progress and success which all are striving to attain in their line.

The time has come when these Associations must, however, prove their value. The old way of Association springing up merely for "a good time" and to create a secretarial position for "some good fellow" is past, and it is much more serious business now than formerly.

Associations must be of some value to their members, but upon the other hand, unless the members will also contribute their time, thought and effort, the Association cannot, no matter how well managed, reach a high state of perfect functioning. There are many lines of endeavor to which an Association should devote itself, all with the final and ultimate end in view of assisting those, in the particular line of business which the Association represents, to determine the simplest, straightest and most applicable method in the proper handling of their wares and in the elimination of waste, and in the reduction of the cost of handling for the benefit of the ultimate consumer and the general public.

The Necessity of Associations

Business men are more and more coming to the realization of the fact that, by co-operating with their fellow-man in the same line of business, they are securing information and data which they are notable to secure in any other way; that they are able to overcome many of their difficulties by constant interchange of ideas, and that the information which is gathered by their Association and disseminated to them is worth many thousands of dollars each year.

They realize also that the best method for them to function in matters of legislation is through their own Trade Associations, whether they may be State or National, because they are a unit in their Associations and they know whereof they speak. A National Association is, therefore, necessary and important, if it functions properly along these various lines.

The public are beginning to understand the different lines of business more than ever before through the publicity of their National Associations, and the members are beginning to get a better grasp upon their Cost Accounting methods, their Advertising methods, their Promotion methods and their labor problems, and best of all, they are giving more thought as to how all of these matters, properly worked out, are going to be for the best advantage of the general public—their customers.

Growing in Importance and Respect

Association work has, by no means, yet reached its perfect state, but it is growing, both in importance and in respect from the public. The order of things has passed away, and the searching light of publicity is now being turned upon all of the functions of the proper kind of organization itself. Education and propaganda are accomplishing more in the open field than could ever have been accomplished by the old methods of secrecy.

The world needs Trades Associations of the right kind, and the concerns or the individuals in any line of business who are not taking their proper place within the association organized for them and their benefit are derelict in their duty and are losing a great opportunity. Progressive men are anxious to affiliate with their trade organizations, because they realize the value of it to them and because they want to assist their competitors and make better men out of them.

The good association member is the one who gladly accepts the suggestions of methods recommended to him by his association and puts them practice, when assured that they are the result of expert investigations covering their entire field. He also is willing and anxious to give to others, through his association, the benefits of his own experience.

He looks upon the association "as his association," and feels responsible for it as to its success or failure. He attends its conventions and takes an active part, contributing as well as absorbing information and ideas. The cost of keeping it up is a secondary matter with him as he knows that he will get value received many times over if he will do his share. Such a man is a good citizen, is valuable to his industry and is appreciated by the public.

The Fourth Annual Convention of the National Retail Lumber Dealers' Association will be held in St. Louis, Mo., Sept. 7th and 8th, 1920, at the Planters Hotel. All retail lumbermen are welcome and invited.

Pulled Pipe Stem from His Throat

Henri Lacroix, of Sturgeon Falls, Ont., who was in St. Joseph's Hospital at Sudbury over a month, left the hospital recently, having undergone one of the strangest experiences on record. He swallowed the stem of his pipe and recovered it after ten weeks' time without the aid of a doctor. In May last Mr. Lacroix, who worked at the Spanish River Pulp and Paper Mill at Sturgeon Falls, was thrown into the mill race at the plant and pinned under some machinery which fell from the jack ladder at the same time. He had several ribs broken, suffered a dislocated shoulder and was under water for three minutes, coming very near death by drowning. He was resuscitated and it was then discovered that he had swallowed the stem of his pipe in the accident.

It was a curved stem about four inches long, and it passed into his stomach. From that time until lately the stem had remained within him, sometimes pressing against his heart, sometimes coming up in his throat, and at other times remaining passive. He asked that an operation be held in order to remove it. This was nat necessary for while lying in his cot one morning Mr. Lacroix became aware that the stem was coming up in his throat. He managed to catch it with his fingers and withdrew it. He is keeping the pipe-stem as a reminder of the strange occurrence.

Hope Lumber Company's Activities

The Hope Lumber Co., Ltd., of Thessalon, Ont., was recently incorporated to take over the businesses formerly known as the Hope Lumber Co., and the Hope Operating Co. The new organization has an authorized capital of $750,000, and is empowered to manufacture and deal in lumber, timber and other forest products. G. A. Mitchell is president of the company; J. J. McFadden, vice-president; C. N. Carney, general manager, and W. F. Cameron, manager.

The Hope Lumber Co. bought the business in 1916 from the estate of E. B. Ford, Bay City, Michigan, and has operated the mill ever since with encouraging success. The daily capacity is about 100,000 feet, and the output consists chiefly of white pine, red pine and spruce. Shipping facilities are excellent both by rail and water, and the company has piling room for fifteen million feet lumber. The mill is equipped with one double-cutting Waterous band mill, one single-cutting Waterous band mill and one Weeks gang saw. There is also a lath department containing a Payette lath mill. The Hope Lumber Co. operate several camps each year, and market their products chiefly through wholesalers.

Personal Paragraphs of Interest

E. W. Tobin, M.P., Bromptonville, Que., who is president of the Lotbiniere Lumber Co., and wife, are on an extended tour of Europe.

John M. Barry, of the Barry Lumber Co., New York, was in Toronto recently calling upon the trade.

S. P. W. Cooke, of Cooke Bros., wholesale lumbermen, Montreal, spent a few days in Toronto recently, calling upon the trade.

F. J. Niven, secretary to Hon. Beniah Bowman, Minister of Lands and Forests for Ontario, and Mrs. Niven have returned to Toronto from a holiday trip to the head of the Great Lakes.

J. R. Carter of the Fesserton Timber Co., Toronto, returned recently after spending a holiday at Milford Bay, Muskoka, and Honey Harbor, Georgian Bay.

J. W. Slater, of the Hocken Lumber Co., Toronto, returned recently after spending a pleasant holiday at West River and other Northern Ontario points.

L. D. Barclay, of the Canadian Western Lumber Co., Toronto, has returned from a holiday trip to Duluth and other points on the Great Lakes.

Thomas Hancock, retail lumber dealer, 1372 Bloor St. West, Toronto, is erecting a handsome new brick office, which is rapidly nearing completion.

F. R. Logan, of Dunfield & Co., wholesale lumber merchants and exporters, Halifax, N. S., was in Toronto recently and called upon a number of friends in the trade. He is a son of Hon. F. J. Logan, who is a widely known lumber merchant.

Dr. E. M. Dechene, deputy minister of Lands and Forests, Province of Quebec, has been on a visit to the West to study the latest methods of preserving lumber. He was accompanied by Mr. H. Kieffer, forest engineer.

C. H. Roper, for many years with John Poag & Co., Limited, Hamilton, is now engaged in business for himself as a building contractor. Mr. Roper has many friends who wish him every success in his enterprise. His yards are on Westinghouse Ave. and his office at 81 Carrick Ave., Hamilton.

The Fesserton Timber Co., Limited, of Toronto, have opened an office at 810 Dominion Block, Vancouver, which is in charge of George W. Abraham, who has been associated with the lumber industry of the Pacific Coast province for a number of years and is well known to the trade.

Ralph S. Plant, of the Vancouver Lumber Co., Vancouver, has arrived in Toronto and will be associated with Kenneth M. Brown, eastern sales representative of the company. He is a brother of Charles Plant, of Vancouver, general sales manager of the company and formerly its Toronto representative.

F. Kent, of the Seaman-Kent Co., hardwood floor manufacturers, Toronto, spent a few days in Chicago. He said that the Canadian lumber market is not materially different from that in the States, the same general conditions prevailing on both sides of the boundary.—American Lumberman.

H. R. MacMillan of H. R. MacMillan Export Co., Vancouver, B.C., spent a few days in Toronto recently on his way to the Coast. Mr. MacMillan was recently in India, where he secured an order for some eight million feet of creosoted British Columbia ties from the Government of India. The consignment will be shipped towards the end of the year, and will be loaded for discharge at Calcutta.

C. J. Brooks, of Toronto, who for several months past has been Eastern representative of Timms, Phillips & Co., of Vancouver, has joined the selling staff of Rose-McLaurin, Limited, Toronto, and will enter upon his new duties this month. Mr. Brooks is well known to the trade in the East, being well thought and well spoken of by a large circle of friends in the industry.

L. J. Linton, who for several years has been eastern Ontario representative for Terry & Gordon, Limited, Toronto, has been appointed sales manager of the firm and entered upon his new duties. Mr. Linton's many friends will congratulate him on his well deserved promotion. Previous to coming to Toronto five years ago, he was with the Rathbun Company in Kingston for two years and then was eleven years with the Frontenac Lumber Co., Kingston. Mr. Linton has had an all-round, thorough experience in the lumber industry. A. E. Richards, late of Prince Rupert, succeeds him as Eastern representative.

Albert Lammers, of Lammers Bros., Stillwater, Minn., died while making a visit to his son, Walter Lammers, who is manager for the Adams River Lumber Co., at Chase, B. C. Mr. Lammers had been in the logging and lumber business with his brother, George A. Lammers, at Stillwater, Minn., for the last forty years, but during the last few years he had been spending most of his time in the South with headquarters at Jacksonville, Fla., looking after mill and timber interests there. He was about sixty years of age. A widow and three sons survive him. The three sons, Walter, Roger and Wyman, are all living in Chase.

W. D. Bayley, Sr., father of W. D. Bayley, M. L. A., for Assiniboia, died recently in Winnipeg, aged seventy-seven years. He had resided in that city for forty-eight years and was a native of Bristol, Eng., emigrating to Canada in 1862. Mr. Bayley farmed in the Muskoka district of Ontario for ten years before he came west to identify himself with the early lumber companies of W. J. Macauley and D. E. Sprague. He was a member of Grace Methodist church, and was for some time vice-president of the Y.M.C.A. In fraternal circles Mr. Bayley belonged to the Good Templars, and for the past 30 years was a member of the A. O. U. W. of the Canadian northwest.

Mrs. Carter, wife of W. W. Carter, president of the Fesserton Timber Co., Toronto, who along with Mr. Carter, is on an extended trip to the West, had a rather unpleasant experience in Vancouver, recently. She was going along the street and was wounded by a bullet from a revolver in the hands of August Wendt, when he attempted to shoot Ole Lien, on Granville street, whom he found in company with Mrs. Wendt. Wendt was placed under arrest on a charge of shooting with intent to kill. Latest advices received from the west state that Mrs. Carter was not seriously injured, the bullet grazing her back. Her escape, however, was a miraculous one, and the news at the time created considerable uneasiness among her friends in the East.

A. F. Bury Austin, manager of H. Bourgouin, wholesale lumber dealer, Montreal, recently passed away. Mr. Austin, who was 54 years old, was absent about two weeks from the office, and gradually became worse. He was the son of the late Henry W. Austin, Lord Chief Justice of the Bahama Islands. Mr. Austin was in the lumber trade practically all his business life, and knew it in nearly all its phases —bush operations, manufacturing, and selling. He was at one time in the lumber buying department of the C. P. R., and after that was in business on his own account. Later he was lumber agent for the Great Northern Railway, and five years ago was appointed manager for Mr. H. Bourgouin. Mr. Austin has many warm friends in the industry.

Lumber Firms Have Jolly Picnic

The annual picnic of the Consumers' Lumber Co. was held at McKittrick's Survey, West Hamilton, on August 21st, and was an unqualified success. The staff of the Long Lumber Co., Hamilton, was challenged by the employees of the Consumers' Lumber Co. to a baseball match and the former was successful by 10 to 7 in a nine inning contest, which was replete with brilliant catches and sharp fielding. Not satisfied with the first reverse the Consumers' Lumber Co. challenged the Long Lumber Co. to a second combat, with the result that the Long Lumber Co. were again victorious. For the winners, the battery was Guy H. Long and Bert Harper and for the losers Wesley and Watson. Milton Zimmerman was the umpire at the home plate and W. M. Findlay, of Toronto, the umpire on the bases. Afterwards lunch was enjoyed, a programme of races carried out and a good time spent generally.

Fifty Million Feet of Logs Handled

The St. John River Log Driving Company's lower corporation drive was completed recently, the river being cleared of logs which have all reached the company's booms here.

The quantity of lumber driven this year was somewhat in excess of last year, the total amount coming through the lower corporation being between forty and fifty million feet and thus far about half of the total quantity has been rafted at the Douglas and Mitchell booms.

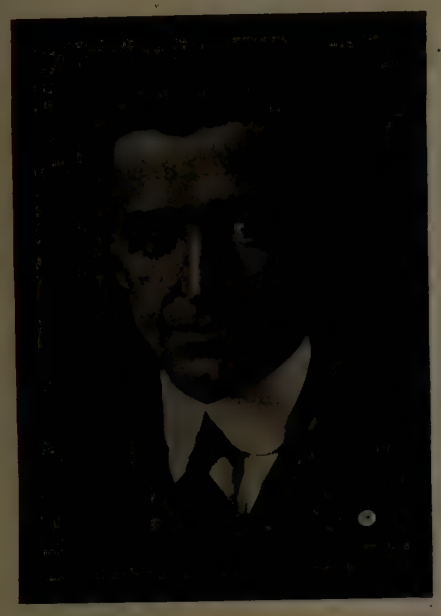
This is about the usual season for the conclusion of the corporation drive, although last year low water delayed the completion of the drive until November 12th. Capt. A. W. Grant, formerly of the Southampton freight packet, was in charge of the navigation of the fleet of boats used on the drive this year.

Valuable Reference in Pulp Arena

The Canadian Pulp & Paper Association has issued an admirably illustrated and highly instructive publication of 120 pages, entitled "A Hand Book of the Canadian Pulp & Paper Industry." A vast amount of information is contained within its pages not only regarding the expansion and development of the industry but also relating to exports, imports and production, Canada's pulp resources, Canada's waterpowers, how paper is made, pulp and paper facts, etc. There are a number of splendid half-tone illustrations of representative plants and a complete directory of Canadian mills, their officers, output, etc. A brief history of the leading companies is given, together with the capitalization, pulpwood supply, waterpowers, mills, tonnage, assets, earnings, etc. The preparation of the mass of information in the volume must have entailed an immense amount of work on the part of the officials of the Association.

Imagine This World Without Lumber

By H. R. Isherwood, St. Louis, Mo.



H. R. Isherwood, St. Louis, Mo.

Suppose that between midnight and morning some strange and mighty power were suddenly to strike every vestige of lumber from the world's entire equipment — what would be the effect upon the welfare of Man?

Here is a startling challenge to the imagination, a suggestion calculated to strip the problem to its naked proportions. Try for ten minutes to see the world as it would look if lumber and all wood products were bainshed from the field of commerce and industry and you will be astonished by the sobering vision that will unfold.

Focus every faculty of your mind upon the task of seeing your familiar world as it would appear if swept clean of every board foot of lumber and wood products. You will feel that your eyes have been opened to an economic revelation!

No thinking man can face that vision without a shudder. Instinctively he will shake himself loose from its spell as from the clutch of a night-mare in which the world has become confused, fantastic, out of focus.

The whole fabric of commerce and industry would be swept into chaos. The picture grows more repugnant with every second that we survey it. But a steady look at it is salutary. It would mean turning back the clock of civilization for a century or more. The famine would spread and affect every industry. It would mean, in short, a world in which Commerce would be the victim of the Sleeping Sickness and Industry would drag and fall under the fatal load of locomotor ataxia. But turn from this dark picture to the splendid realities of the present and the bright certainties of the future.

Every community has an interest in its lumber dealer. Of all the sellers of goods at retail, he is the most important factor in community development, because what he sells usually becomes a visible and lasting part of the community. It may be truthfully said that he sells the very stuff out of which communities are made. In new territories he is the first merchant on the ground; and in established sections he is the last merchant to go out of business.

Moreover, it is an interesting fact that any community is about as wise and progressive as its leading retailers—no more and no less. If the people of any community are ahead of its retailers they usually soon open a way for a live retailer—sometimes by the negative method of starving the backward retailer by sending trade out of town. But if, on the other hand, the lumber dealer is always a little ahead of his community, always alertly anticipating its needs and desires, he can make that community move forward faster and faster while at the same time he is increasing his own income, standing, and future prospects. Therefore, in a special sense, the lumber dealer is a builder of his community—and a lot of that community's future depends on him and his ability.

Heavy Crop of Spruce Seed

The Commission of Conservation has received reports from a number of points in Ontario, Quebec and New Brunswick indicating that this is an exceptionally heavy seed year for white spruce in eastern Canada. There promises to be a good yield of white pine seed as well. Last year there was practically no spruce seed in eastern Canada. Heavy seed years for spruce and pine usually occur only every fourth year, therefore those who wish to collect the seed should take advantage of the abundant crop this year.

White spruce seed ripens in September and the cones should be collected just before they open. If picked too early, the seeds will be immature, and if left till the cones open, the seeds will have dropped out.

The increasing attention being given to reforestation has developed a large home market for tree seeds. In addition to the various governmental and commercial nurseries, several of the pulp companies, including the Laurentide, Abitibi, Spanish River and Riordon, have nurseries. There are also good markets in the United States and Great Britain for Canadian tree seeds. Heretofore the nurseries on this continent have had to depend largely on European seed owing to the limited amount of native seed collected. The European seed has not been entirely satisfactory; our climate and hardy native stock is preferred when obtainable.

During the last few years the demand for tree seeds has always exceeded the supply and this spring $10.00 per lb. could be secured for white spruce seed. This, however, is exceptionally high, $5.00 being considered a reasonable price. The cost of collecting and preparing the seed for the market varies with the local conditions.

Points to Observe When Ordering Lumber

AN Eastern U. S. lumber firm has formulated several points to observe when ordering lumber. The suggestions are well worth keeping in mind:

1. Consider carefully points you wish to cover in your order.
2. Shippers must be financially responsible, or satisfactory to you by reputation.
3. Terms.
4. Time of shipment, approximately.
5. If orders are given to traveller, have it understood that before his company enters the order, his company mail you an acceptance so worded that you will be mutually agreed on all points.
6. Wire order for transit cars is very dangerous.
7. Consider the terms, grading, method of working, widths and thickness will be according to custom rules at shipping points unless otherwise agreed.
8. Dryness, Air on Kiln-Dried.
9. If Air-Dried, it is best to go by weight, since most trouble will come from South Western Short Leaf, on account of stain, etc.
10. If kiln-dried, especially in expensive woods, must be done with modern equipment; case hardened, warped, split split output won't do.
11. Flooring, ceiling and all worked lumber be sure and agree on percentage of lengths and widths.
12. Thickness, whether rough or dressed, have your shipper note what he intends to ship.
13. Kind of car, rack, box or open car.
14. If high priced material car roof must be tested for leaks.
15. Routing.
16. Discount, amount, when.
17. Mention bundled or loose stock. In flooring and ceiling, how many pieces to bundle.
18. Hemlock mention grade No. 1, Merchant, or No. 2.
19. Lath, be careful about widths, thickness, and lengths
20. If lumber is purchased at shipping point, agree on freight rates.
21. Working of flooring, hollow back, planed one side and matched, or planed one side and centre matched.
22. All hardwood flooring must be according to the Hardwood Manufacturers' Association Rules, as regarding grades, percentage of lengths, etc.
23. Do not confuse Coast Stock, especially in Roofers and Flooring, with South Western, as to the grades and working.

Pulpwood Great Industry of North

Speaking recently at a big picnic held by the United Farmers of Ontario at Monteith, R. A. McInnes, manager of the Abitibi Power and Paper Co., Iroquois Falls, Ont., referred to the close connection of the pulpwood industries with the development of the North. The interests of the North were the interests of the pulp and paper companies.

The chief difficulty he saw was that the North up to the present had not spoken with one voice. He had great difficulty in getting at the facts in regard to what was best for the North. It was no use going to the Government and saying the North wanted something. The people must get together, decide what they wanted and what was best and then approach the Government with a definite programme.

The future of the North lay in pulpwood, the ministers had said. That was true, but he would add that the interests of the pulpwood industries and of the farmers were identical. Settlement was badly needed in the North and the pulpwood industries furnished the market for these farmers.

He gave figures showing that a million square miles of forest had been destroyed by fire in the past few years. That meant that what fire had destroyed in one year would have kept ten mills as large as the Abitibi going day and night for 14 years.

What was to be done? The thing to do was to figure out a definite scheme of fire protection and then go to the Government with it. The future of the North was bound up in the production of the forests, so scientific cutting, etc., must be adopted to control the forest wealth. After fire protection there must be arrangements for reseeding, either by nature or artificially.

Few people realized what the pulp industry meant to the North. The Abitibi Co. paid last year three and a half millions in wages alone. Then there were other mills at Smooth Rock, Kapuskasing and so on. In a few years the wages paid annually by these and new mills would run to the enormous total of $15,000,000.

Another sign of the importance of the North was that the Abitibi Co. had paid in freight to the T. & N. O. in the past year $950,000 and the other companies in proportion.

The investment in the past three years by pulp companies had been $60,000,000 in the North country and it was just beginning. That showed the enormous importance of the industry to the North.

Where does the farmer come in? The pulpwood industries must have settlers; they must have produce and labor. First comes the large industry, then must come the settlers; roads are needed. The companies and the settlers must work together. It is useless for the people of the North to act individually. They must first work out a programme for the North and then go to the Government and get what they want.

Model Pulp and Paper Town Planned

According to plans now being made by Premier Drury, Kapuskasing is to be made a second Iroquois Falls. In the latter place the Abitibi Company owns the town-site and has brought into being as fine a modern little town as there is in the province. It is the intention of the Ontario Government to make this place similar.

The Premier declined in making the agreement with the Spruce Falls Pulp Company to turn over control of the townsite. That has been retained and the first step to be taken will be to have the Government engineers lay out a new townsite on modern lines. The Premier has also ensured the town of an ample supply of electric energy by pledging the Pulp Company to reserve ten per cent. of its power production for the town. Likewise 15 per cent. of its newsprint output will be reserved for sale in Canada under the agreement.

New Brunswick After Pulp Mills

"Any complaints, whether British, Canadian or American, which have a proposition to develop pulp and paper enterprises in New Brunswick will receive every encouragement from the Provincial Government," said Hon. W. E. Foster, Premier of the Province, "Our general policy towards pulp and paper enterprises is embodied in the statutes of the province, and provides for the granting of licenses to cut on the Crown lands for the purpose of manufacturing pulp and paper under what are very reasonable terms. These licenses extend for a period of thirty years, and are subject to renewal for a further period of twenty years. They may be exchanged for a saw mill license.

"The Government is now going ahead with the work of developing water powers in various parts of the province. One object of this departure is to encourage industrial development. Where a water power is developed as a public enterprise, it is the intention to offer power at as low rates as possible to any private company wishing to establish a pulp and paper plant in the neighborhood. Any company which comes to the government with a reasonable proposition to develop a water power in various parts of the province. One object of this de- enterprise will be given not only encouragement but assistance in a financial way, due regard being had to the public interests. While we are going ahead with water power development as a public enterprise, we are ready also to encourage private enterprise in connection with water power development, especially if there is an industrial project associated therewith."

Will Pulpwood Prices Break?

E. R. Heyland of the Thompson and Heyland Lumber Co., Toronto, recently returned from an extended trip to Quebec and New Brunswick, where he was looking over the pulpwood situation and studying market conditions. He says that the production will be very large this season. Owing to the comparative quietness of the lumber market many men who were formerly engaged in logging are now cutting pulpwood and there is an impression in some quarters that the high prices which now prevail in pudpwood are due to break this winter. If the break should come there will be a lower rate for pulp and paper set in. The car situation in the east is serious and is likely to become worse this fall and winter.

Mr. Heyland states that in Quebec fifteen thousand cords is the limit on any transaction which the banks will finance. While the prospects are that there will be an overproduction in pulpwood, there is not a great quantity for immediate delivery, so it is stated. In Quebec the mills are paying, for next year's delivery, from $18 to $20 per cord for peeled spruce and balsam, while rough, unpeeled wood is quoted at $11 to $12 for delivery in 1921. In Ontario the price for unpeeled wood is from $11 to $14. A great demand has set in for poplar, owing to the attractive prices paid and the product in that line is now reported away over the requirements of the market. At country points the figure prevailing is from $12.50 to $13.00. Peeled spruce is quoted from $17 to $18.

Northcliffe Buys Gulf Pulp Company

The most important purchase made by English interests of Canadian pulp holdings has now been closed as the result of the Northcliffe interests, of London, England, having purchased a two-thirds interest in the Gulf Pulp & Paper Company, at Clarke City, below Quebec. This is the company owned by the members of the Clarke family.

Following their purchase, the Northcliffe interests have formed the Imperial Paper Mills, Limited. The remaining one-third of the interests in the company is being purchased by other London people who are interested in the purchase of paper. The price, it is understood, was $3,000,000 United States currency.

How Pulp and Paper Exports Grow

Pulp and paper exports from Canada for April, the first month of Canada's fiscal year, reached a total value of $8,172,356, as compared with $4,968,939 for April, 1919, an increase of $3,203,417. They were made up as follows:

Month of April	1919	1920	Gain
Paper & mfgs. of	$3,630,238	$4,729,354	$1,099,116
Chemical pulp	1,120,990	2,936,633	1,815,643
Mechanical pulp	217,711	506,369	288,658
	$4,968,939	$8,172,356	$3,203,417

The greatest gain was in unbleached sulphite, of which 397,359 cwts., valued at $1,587,236 were exported in April this year, as compared with 87,786 cwts., valued at $352,485 last year. Of bleached sulphite, 131,161 cwts., valued at $728,669, were exported this year, as compared with 80,259 cwts. valued at $363,732 last. Exports of sul-

phate (kraft) pulp for the month amounted to 163,535 cwts., valued at $620,728 this year, compared with 131,375, valued at $404,773 last. Exports of mechanically ground pulp for the month were 198,664 cwts., valued at $506,369, this year, and 161,449, valued at $217,711 last.

Newsprint formed the principal item of the paper exports for the month. There was, however, a falling off in quantity although an increase in value, there being 899,342 cwts., valued at $3,827,541, exported this year, compared with 920,592 cwts., valued at $3,160,318 last.

Exports of pulpwood for the month amounted to 40,433 cords, valued at $420,741, a decrease from 68,680 cords, valued at $629,189, a year ago.

The distribution of the month's exports was as follows:

	United Kingdom.	United States.	Other countries.
Total paper	$344,517	$3,730,682	$654,155
Total pulp	514,568	2,506,825	421,509
Pulpwood	.....	420,741	
Totals	$859,085	$6,658,248	$1,075,664

New Pulp Plant on St. Maurice

A Montreal bond company announce that they have recently underwritten the entire issue of $2,400,000 of bonds and debentures of Manouan Pulp and Paper Limited, carrying a bonus of common stock.

This company, which was organized about ten years ago as a holding company, is now developing power on the St. Maurice River, just below the confluence of the Manouan and St. Maurice rivers. They have also owned for many years extensive pulp limits adjoining Laurentide, Belgo-Canadian and St. Maurice Paper Company Limits.

It is proposed to build a 100-ton ground pulp mill immediately, with the ultimate idea of adding later, the power now being developed being more than sufficient for that purpose, consisting as it does of about 38,000 h.p. The power which is known as Allard Falls, is one of the last remaining large power sites on the St. Maurice.

Want Pulpwood Cargoes Released

F. H. Keefer, K.C., representing the Russell Timber Company, Port Arthur, held a conference with Premier Drury recently, at which the Government was asked to release two boatloads of pulp wood, one at Sault Ste. Marie and the other at Fort William. On one boat there are 400 cords and on the other 1,100 cords. Mr. Keefer pointed out that the company had over 15,000 cords yet tied up as a result of the Russell-Latchford investigation, and that this would more than satisfy all Government claims against the company. The Government will probably allow the wood to be shipped.

Mr. Backus Will Erect Big Plant

The by-law selling the municipal power plant to the Backus interests was carried recently by a vast majority. In addition to the sale of the power plant the by-law fixes the present assessment of the Backus interests here at $300,000 for ten years, and also grants exemption from all but school taxes for a like period on all additional lands up to 125 acres they may require for the purpose of the immense pulp and paper industry they propose to establish here.

The company agrees to sell power to the town for its utility service at $20 per horsepower per year. It now costs the town $27. The agreement approved by the passing of the by-law is conditional upon the company securing the English River pulp limits, which consists of 2,500 square miles north of the Lake of the Woods district.

How Pulp Consumption Has Aviated

From a purely Canadian viewpoint, the most important point, however, is that the United States publishing houses cannot be supported solely by United States forests. If operated to capacity, and if wholly dependent upon the resources of New England and New York, the pulp and paper mills of the Eastern States could exhaust their resources in ten or eleven years. They must, therefore, draw upon the resources of Eastern Canada, of the Pacific Coast states and of British Columbia, said James White of Ottawa, assistant to the chairman of the Commission of Conservation, before the Rotary Club recently in Vancouver.

Despite the enormous demand and the unprecedented increase in prices, the United States production of newsprint has been practically stationary since 1913, hence the enormous increase of production in Canada. The Canadian pulp and paper manufacturing end employs 25,000 persons. Obviously, it is contributing on an increasing scale to our exports to correct the balance of trade, which is running so heavily against us.

"In 1910, Canada manufactured 161,000 tons of newsprint and exported 25,000 tons," added Mr. White. "Nine years later, in 1919, we had increased our output 400 per cent. to 808,000 tons and our exports had increased 2,400 per cent. to 624,000 tons," said the speaker. In the year 1919-20, 80 per cent. of our exports of pulpwood, pulp and paper went to the United States. These exports were valued at $113,000,000, nearly double the exports of three years previously."

In 1918, the United States consumed 5,250,796 cords of pulpwood. Of ths amount, 1,017,845 cords, or nearly one-fifth, was imported from Canada, Quebec, contributing 70 per cent. and Ontario and New Brunswick about 15 per cent. each.

"Canada is supplying about one-fifth of the pulpwood used in the United States, about one-ninth of the wood-pulp and one-third of the newsprint. Or, in all, our resources are supplying in the unmanufactured, partially manufactured and manufactured states about 55 per cent. of the newsprint used in the United States," Mr. White declared.

"The next problem is: How long will our supplies of pulpwood last? Eastern Canada has a sufficient amount for about 50 years at the present rate of cutting and ignoring the annual growth." While there is a large amount of pulpwood in the prairie provinces the spruce and balsam is widely scattered and mixed with popular, thus rendering exploitation on a large scale almost prohibitive until further rail transportation is provided.

In British Columbia the outlook is much rosier. The investigations of the commission of conservation shows that there is, in your province, 385,000,000 cords of spruce and balsam and 28,000,000 cords of other pulpwoods, such as jackpine, lodgepole pine, popular and cottonwood, or 313,000,000 cords in all. Of this amount, about 175,000,000 cords of spruce, balsam and hemlock and 10,000,000 of other species, are at present available. In making the calculation, 500 board feet is taken as equivalent to one cord.

Laurentide Will Install Wireless Station

Plans are being discussed at present concerning the installation of a wireless telegraph station in the plant of the Laurentide Co., Grand Mere, P.Q., probably under the supervision of the Forestry Department, for the purpose of communicating with the company hydroplanes, and also to receive messages from the planes in emergencies. Both machines have wireless sets which they do not carry at present, but it would be a simple matter to install them, and Lt. Graham is able to operate the wireless, as this knowledge was necessary during the war. It is also possible that an effort to install a wireless telephone set will also be made.

Lieut. Graham has been engaged in the work of defining the boundaries of the company's limits by means of aerial photos.

Big Increase in Annual Production

It is understood that the production of the Spanish River Pulp and Paper Company in the fiscal year ended June 30 shows an increase of close to 47,000 tons of newsprint, groundwood, sulphite and board and wrapping paper combined, over the previous fiscal year.

It will be recalled that the company added an additional paper machine to the Espanola plant in the latter part of 1919, and still another early in 1920, so that the newsprint will show in the annual report an increase of upwards of 21,000 tons for the year.

Evidently production has been maintained in an intensified form, as the "Soo" mill, which is rated as a 220-ton per day mill, reached a record of 258 tons recently.

It is understood that the annual report will show production of approximately 160,000 tons of newsprint, 135,000 tons of groundwood, 57,000 tons of sulphite and about 10,000 tons of board and wrapping. The newsprint gain, which is the largest item of the company's production, rose close to 22,000 tons in the year, while the other items of output shows relative gains.

Increasing Production of Pulpwood

Pulpwood operators are getting busy in Hastings, Haliburton and other countries. The high prices paid are causing many to take out wood who never engaged in this line before. The call for the various pulp and paper mills in the province is for more wood. One hundrer and twenty-six cords of pulpwood are cut and loaded every day at the plant of the Hydro-Electric Commission on the old Rathbun property in North Hastings. Night and day shifts are employed.

Bright Publications on B. C. Timber

There has recently been issued by the Forest Branch of the Department of Lands, Victoria, B. C., a booklet entitled, "British Columbia Timber." In the publication which deals mostly with the chief commercial woods of B. C., there are a number of splendid illustrations, one being a five hundred old Douglas fir tree. The uses, strength and working stresses of B. C. timber are given. An important feature of the book is the table of Strength Values which appears in the appendix. Loren L. Brown, B. C. Lumber Commissioner for the East, has just received at his office 1 Adelaide St. E., Toronto, a large supply of this interesting work for distribution.

Preserving the Timber that We Have

How Decisive Steps May Be Taken to Ward Off Famine in Forest Products—Stopping the Rot

Why is the retailer not, as yet, the only logical outlet for wood preservatives which are to be used by the brush and open tank methods. Our experience in the past 30 years has proven that other mediums must be adopted, which has also been confirmed on various occasions by competitors who have likewise entered into campaigns to get wood preservatives distributed through the retail yards, says C. A. Wood Preserver Co. of St. Louis, Mo.

Last March when the Research Department of the Southern Pine Association requested us to use our best efforts to stop the drastic destruction of timber that could be preserved, we explained why the retailers were not as yet the proper ones to co-operate with.

While many a manager or owner of a yard is heartily in favor of the trade using a wood preservative, the employees of the yard, like all of us, follow the line of least resistance and do not exert themselves to educate the trade to the use of a preservative, particularly if said employees get their hands and clothes soiled in delivering some wood preservative.

If every saw mill sets the precedent of advocating conservation, in addition to making a profit on the operation, by preserving the timbers that they themselves use, it will be only a question of a short time when the consumer will ask the retailer for a preservative. You know, when a man asks for a product, all the clerk has to do to make the sale, is to agree with the customer.

Preserve the timbers you use in the construction of boats, barges, docks, bridges, trestles, ties, platforms, sills, log cars, water towers, shingles, etc.

The American Forestry Association in soliciting subscriptions issues a bulletin reading in part as follows:—

"We are consuming lumber three times as fast as we are procuring it.

"Experts predict our saw log lumber will be gone in fifty years.

"The bulk of the original supplies of yellow pine in the South will be gone in ten years and within seven years 3,000 manufacturing plants there will go out of existence.

"White pine in the lake states is nearing exhaustion and these states are paying $6,000,000 a year in freight bills to import timber.

"New England, self-supporting in lumber twenty years ago, now has to import one-third of the amount used. It has $300,000 invested in wood and forest industries, employing over 90,000 wage-earners.

"Fire destroys over $20,000,000 worth of timber every year and kills the reproduction upon thousands of acres of forest lands.

"Within fifty years our present timber shortage will have become a blighting timber famine.

"Forests can be protected from fire, regrowth can be encouraged, conservative cutting can be practiced, reforestation can be accomplished, but it takes from fifty to one hundred years to mature a timber crop.

"Forest devastation must be stopped, lands now in forest must be kept continuously productive, forest lands now devastated and idle must be put to work."

We had intended to add to the foregoing the importance of practicing conservation by preservation, but we are handed a letter from the State Forester of Illinois, who, in commenting on the necessity of preserving timber, writes: "Perhaps, after all, it is a legitimate part of forestry, if we can make the timbers we are using last twice as long, thus saving the timber growing in the forests."

Any further comment on your part is unnecessary to impress you with the need of your doing your share to stop that rot.

Budget of Briefs from Busy East

Gordon G. Scott, of Fredericton, N.B., has begun operation of his new saw mill, which was erected in that city on a site of an old mill burned some fifteen years ago. The new mill will be the first sawmill in New Brunswick to operate by electric power. Power will come from a one hundred and fifty horse-power generator. The power house is constructed of concrete blocks and is most modern. Six individual motors supply power to the various machines, which consist of a Robb rotary with steam feed, a large Oxford edger, a lath machine, planer and trimmers. The owner has one and three-quarter millions of lumber ready for manufacture. The main mill is thirty-six by one hundred and twenty feet.

Reports from the spruce bud worm survey party under the direction of field sperintendent R. P. Gorham are encouraging. A large area of timber has been covered by these survey parties, with Nictor Lake, N.B., as their base. A camp has been erected near this lake and the parties are working the timber for miles around in search of the pest. So far they have not come across a very large number of the worms and the spruce trees in this region are for the greater part unharmed, very few being infected. The territory around the Nepisiquit and Upsalquitch waters has been given a thorough survey, and south of this the damage is not very evident. North of these waters the survey is progressing at the present time and the absence of the pest in this section is growing more and more evident as the parties work farther north. They will begin a survey in the Serpentine country in the near future.

A statement of lumber and other products exported to the United States from St. John for the quarter ending June 30 shows a gain of more than a million dollars over the corresponding period in 1919. The figures which were recently compiled are as follows:

Laths	$ 205,718.05
Lumber	725,986.27
Pine boards	50,760.45
Pulpwood	35,155.45
Shingles	1,626.35
Ship timber	1,805.50
Wood pulp	446,429.27
Total	$1,467,377.14
Total for 1919	464,545.20
Increase	$1.002,821.94

The Victoria County News in a recent edition has, in part, the following article regarding an attempt to buy land for the erection of a new mill: Mr. Archie Fraser has been in Perth the past few days trying to secure the necessary land about the Tobique Narrows on which to build the proposed pulp mill, but it is understood that the owners have put a prohibitive price on their properties, so much so that other locations are being investigated. The people of Tobique Narrows have been waiting for a long time for the Fraser Company to seek a site for development, and it is too bad to drive the company from their midst, which will inevitably happen unless they sell their properties at a reasonable price. The very same thing happened when the Fraser Company went to Edmundston, N.B., to locate. The owners of the first choice site put the price beyond reason, which forced the Fraser Company to seek grounds in another locality and now the owners of the first site are grieving over their mistake. Why not offer some inducement for a great industry rather than push it away?

The Royal Gazette recently contained news of the regulations to govern the sales of timber limits to be held in Fredericton in the near future. The sale will be on a basis of stumpage value, the stumpage on spruce, fir, pine and cedar being at standard rates and on other varieties as follows: Hemlock, four-fifths; hardwood, one-half; poplar, three-quarters. There will be no mileage or fire tax exacted. Sixty-seven berths are offered at this sale. Lively bidding is expected and licenses will run until August 1, 1922.

There have been some heavy lumber shipments from this province during the last few weeks for the United Kingdom. Among those sailing were: The four-masted schooner Mable Gal, which took away 826,000 superficial feet for Havana; the three-masted schooner E. M. Roberts has completed loading at Stetson, Cutler & Company's mill, Indiantown for New York; the S. S. Lynntown sailed for Belfast with 1,889,674 feet of deals shipped by Stetson, Cutler & Company; the bark Vallao is completing loading lumber, which is being shipped by W. Malcolm Mackay. Figures for some of the sailings are not as yet available.

"Just Touched the Bally Thing"

The most hopeless case of a green Englishman (of years ago) was one chap who, after blowing his money, got a job in a saw mill, says Bob Edward's Summer Annual. For the first time in his life he was introduced to a circular saw and the foreman, after giving him the necessary orders, left him to his work. He became much interested in the buzzing blade and it was not many minutes before he lost a finger.

As he sat mopping the blood from his hand, the foreman came back.

"Hullo, old man, what's up?" he cried.

"What's up? What's off, you mean," replied the young Englishman.

"And how on earth did you manage that?"

"By jove, I hardly know. I just touched the bally thing like this with my finger when—by Gawd! there's another one gone."

The Urgency of Wood Preservation

Prolongs Life Greatly—Best Methods Are Pressure Treatment, Open Tank Treatment and Brush or Spray

By F. Sturgeon, Toronto*

During the last hundred years the idea of wood preservation has become more popular but to-day it is an absolute necessity. The high cost of wood and the high wages paid labor to-day make it essential to put in the best of everything from an economical standpoint as this avoids replacements, which are so costly.

It is said that the early Romans used various oils to preserve bridges and wooden statues from decay and it is also certain that the Egyptians must have studied the matter in those early days, for it is a matter of common knowledge that some of the coffins discovered in Egypt were proven to be two to three thousand years old and were in good shape.

In England and the United States the last hundred years has particularly developed the wood preserving industry with the result that in the States alone some seventy to one hundred million gallons of various preservative oils are used yearly.

All government departments, railways, corporations and firms are now giving more attention and consideration to this industry, for they realize that preservation of wood is an essential.

Results of Investigations in Wood Preservation.

Investigations after many years of experience give us the following data to go upon:

All wood is subject to deterioration and decay, chiefly due to either fungi or bacteria. These are the principal troubles we have to guard against and which prevail generally throughout the world in a more or less marked degree according to climatic conditions. In hot climates such as Africa and India the white ant is a serious pest to contend with. On this continent we find considerable damage also from the hole borer (of the beetle variety) and the shipworm and torredo. The various forms of decay and rot are governed by the atmosphere and position, for instance the life of a tie in Texas averages about one and a half years because of the humidity, etc.; in Ontario six years and in some districts around Edmonton eight to nine years.

Timbers completely immersed in water will last for many years, some I have examined which have been found to be in good condition after twenty years, but where timbers are placed on the water line with wet and dry alternately they will rot in the course of a year or so. Telegraph posts will last much longer when they are used close to the place where they are grown, for instance a spruce pole used within a few miles of its native soil will easily last eight or nine years, whereas an imported pole of similar character will not last more than four or five years.

There are some hundreds of patents for treating timber covering methods and patent materials, the only successful and generally used commercially are: pressure treatment, open tank treatment and brush or spray.

The Use of the Term Creosote.

In considering the oil for these methods we find that the English admiralty, army and other government departments, American navy yard, irrigation and other departments, as well as such corporations as the American Telephone and Telegraph Co., Western Union, etc., specify "An oil which shall be obtained by the destructive distillation of bituminous coal." This eliminates such oils as generally come under the heading of "Creosote," which term is very often used in specifications and affords no protection to any principal, for the term covers oil obtained from hardwood tar, wood creosote, crude oil creosotes, etc.

In the selection of a suitable "Coal Tar Creosote," for the brush, spray and tank treatment, which is the most commercially practical, the following points have to be taken into consideration — specific gravity, flash and burning points, tar acids, distillation points. To illustrate my point, take two well known preservatives, Major's Carbolineum or Letteney; the following specification covers them—

Specify gravity, at 38° Centigrade, 1.10 to 1.13.

Condition at 38° C., liquid.

Flash point about 145° C.

Burning point about 175° C.

Distillation to 234° C. none.

Distillation from 235 to 300 about 10 per cent.

Tar acids, less than 1½ per cent.

This means that you have an oil which has no evaporation under 235° C., which is about 550 degrees Fehrenheit, and therefore it is heat. The small percentage of acids prevents any deterioration of spikes and bolts.

The oils employed for the pressure process are of very much obvious it remains permanent with the wood. The flash and burning points being high enable it to resist the action of the sun and great lower value, not being so carefully distilled. The flash and burning points are lower, they distill at a lower temperature and contain a larger percentage of pitch.

I consider the pressure treatment commercially satisfactory for ties and wood which is to be used underground in large quantities, but for timber exposed to the atmosphere wholly or partially such as wharf or bridge timbers, posts and telegraph poles and cross-arms, I recommend the heavy oil of the Letteney type, because the penetration is good and it goes where it is most needed. Sufficient oil is taken up by the wood and the fabric of the lumber is not destroyed. I maintain that when ten or fifteen pounds of oil are put into a cubic foot by the pressure process it must injure the tensile strength of the wood. It is extremely difficult to lay down any set rule, however, and one must be guided by the numerous conditions arising, such as position where wood is to be used after treatment, condition at time of treatment, etc.

The practical method of treating timbers in small lots is to take the highest grade of oil procurable and dip in a tank heated to 150° to 200° F. Heating the oil assists penetration. In hot weather with lumber in good condition splendid results are obtained by merely brushing the material on liberally.

The Dead Tree

Slushly is the highway between the unspeakable hedges;
I pause
Irresolute under a telegraph pole,
The fourteenth telegraph pole on the way,
From Shere to Havering,
The twenty-first from Havering to Shere.
Crimson is the western sky; upright it stands,
The solitary pole,
Sombre and terrible,
Splitting the dying sun
Into two semi-circular halves.
I do not think I have seen, not even in Vorticist pictures,
Anything so soiltary,
So absolutely nude;
Yet this was an item once in the uninteresting forest,
With branches sticking out of it, and crude green leaves,
And resinous sap,
And underneath it a litter of pine spindles
And ants;
Birds fretted in the boughs and bees were busy in it,
Squirrels ran noisily up it;
Now it is naked and dead,
Delightfully naked,
And beautifully dead.
Delightfully and beautifully, for across it melodiously,
Stirred by the evening wind,
The wires where electric messages are continually being despatched
Between various post offices,
Messages of business and messages of love,
Rates of advertisements and all the winners
Are vibrating and thrumming like a thousand lutes.
Is the old gray heart of the telegraph pole stirred by these messages?
I fancy not.
Yet it all seems very strange,
And even stranger still, now that I notice it,
Is the fact that the thing is after all not absolutely naked,
For a short way up, half-obliterated with age,
Discolored and torn,
Fastened on by tin tacks,
There is a paper affiche
Relating to swine fever.
The sun sinks lower and I pass on,
On to the fifteenth pole from Shere to Havering.
And the twentieth
From Havering to Shere;
It is even more naked and desolate than the last.
I pause (as before).

(Author: We can start all over again now if you like.)
(Editor: I don't like.)

—Punch.

Educating the Public Regarding Lumber Costs

What Operator Has to Encounter—He Knows all About High Costs Many Months Before the General Public is Called Upon to Face the Situation

By Everett Andrew, Ottawa

The wail of the general public in Canada today is the high cost of living, the builders grievance is the high cost of lumber, but the lumberman's complaint has got into a chronic stage, travelling a lap or so ahead of the other fellow, and his worry now is the high cost of labor. Old H. C. L., take it anyway you want to, gets you finally, unless you're a bootlegger, and no matter where the first little root of H. C. L. starts, the public is going to learn about it sooner or later.

In case of lumber production the public learns about it later. The lumber operator who has to foot the first bills, stock his camp months in advance with a wide variety of high priced foods, pay high priced labor, and in some cases wait two or three years until his logs come to his mills and he begins to get his money back, figuratively knows more about the cost of living months in advance than the grouch who complains about having to pay sixty dollars for a suit of clothes, and denounces the lumbering industry in general when he comes to purchase lumber.

Some Dicissitudes of the Industry

Perhaps sympathy, and not harsh words, such as he uses, should be the balm for his complaint, for either he is ignorant of lumbering operations, or has a suspicion that the world in general is trying to do him, or that because there have been successful lumbermen who have made money through hard work and foresight, that they should give some of their profits to him.

"Profits," yes "profits" is all he talks about when he comes to pay sixty dollars per M. upwards for his lumber. Losses? Why he spoofs at them. There are not any in the realm of his imagination, but again a Christian spirit should be exercised, and he should be forgiven because in the lumbering industry, there are losses, big ones, but they are not generally advertised, or referred to in the public press or brought to the notice of the general public.

Fortunes have been made by families connected with the lumbering industry of the olden days, and perhaps other fortunes are still to accrue to Canadian lumbermen, but on the other hand the fact remains there have been losses, big ones, and in some cases they have spelled disaster to more than one would-be lumberman. The general public apparently does not stop—or is too busy or disinterested to—and reflect on the cost of producing lumber; the risk attendant to logging, the big expenses that must be borne and carried, and the foresight a lumber manufacturer must possess. The public does not pause to take account of the cost of the operation, and it is apparently because it "don't know," that it raves about the high cost of lumber. Simply because a certain lumberman has accumulated sufficient money to last him and perhaps even all the members of his family for the rest of their natural lives, is no justification for such a man selling lumber at $40 per M. if it costs him that much or more to produce. He is entitled to his fair and just profit, and an equitable return on his invested capital, just the same as if he had his capital invested in any other enterprise.

Some Things the Public Don't Know

Victory bonds, a national security, yield 5½ per cent. Steel, iron, pulp and paper stocks, yield even higher dividends, yet when it comes to profits on lumber the public in general ties itself down to bank interest. All it can see the lumber operator is entitled to is three and a half per cent. They talk about days when limits "went for nothing," but intentionally or otherwise they seem to forget or "don't know,' 'that it costs money in ground rent, stumpage, fire ranging, government dues, etc., to "carry" a limit.

It is true that any limit increases in value, year by year, unless it is visited by fire, or cut over, or a serious destructive insect growth sets in upon it. On the other hand, it must be reckoned that the owner takes a chance, (the public don't) of a fire sweeping through the limit, and destroying it completely, or damaging it so severely as to render it unprofitable for further operation. Insect life, too, operates to a serious extent—but again, the general public "don't know" anything about it. All it sees is the high cost of lumber.

Though the lumbering industry is one if not the oldest of Canada's staple industries, it appears that the forefathers of the trade neglected an important point. It is the education of the public as to lumbering costs, losses, and operation. Twenty and thirty years ago the lumbermen of Canada regarded fire as their greatest enemy. They either "didn't know" or disregarded the loss through insect life. Today through the good old school of experience they have learned their rules, and some of them, now they have learned them, are profiting by what happened. There's a problem still greater, confronting the lumber trade of the Ottawa Valley today, if not throughout all of the Dominion and it is the contentment of labor, so far as lumbering operators or companies go.

A patent or some other device having the same authority, for the purpose of keeping workers in the camps of the Ottawa Valley lumbermen, is urgently needed and experiences of the last two woods seasons emphasize its demand. Ottawa Valley lumber companies last year and the year before lost thousands of dollars through the migration of their camp labor.

For the purposes of this article there is no use of going into individual detail as to which company dropped the most or which company came out best in regards to its woods labor and its camp outfit. Suffice to say that they lost—and some of them lost heavily.

An Ottawa Valley lumberman taken all around is more or less a gambler, and this applies as much to John R. Booth as it does to the smaller operators. In most cases, such as that of Mr. Booth, there are unconscious gamblers in a sense. They would be highly insulted to be called gamblers, and perhaps some of them have never shuffled a deck of cards or tossed a poker chip in a game. Still they gamble, because they combat the forces of nature, forests, streams, manpower, brains, etc., to make their own livelihood. This is something the public never understood or never will, until some of the loudest howlers about lumber prices, decide of their own free will to start an operation. In the first place they know nothing about lumbering except to grouch, which in the ranks of labor today seems a common complaint, and perhaps in a small sense it may thus be attached to the lumbering industry.

Keeping Men in Camps is Big Problem

Let the kickers go out and acquire limits, and begin to learn the game through experience by establishing their camps and getting in their supplies. Next get their woods force and "keep it" and then begin to get out their logs and cut them and sell their lumber. Then, and not till then, will they commence to get a dim insight into what it means to "stick" in the lumber game. During their period of operation they will learn, (perhaps with sorrow), that there is somebody in it smarter than them, and who, in the final analysis, can undersell them and still make a profit, while they are operating at an actual loss. Such circumstances have happened, and they are going to happen again.

At the present time in the Ottawa Valley, and doubtless it is just as applicable to the rest of the Dominion, the biggest, newest and most up-to-the-minute question, is "keeping the men in the camps." It doesn't mean anything to the general public, but it means thousands of dollars per year to every operating lumber concern. There is no object or intention in disguising the truth either to the operator or the public. Everyone possessed with common sense knows that, without the logs being gotten out of the woods and brought down to the mill for conversion into lumber, production must drop. Guided by the law of supply and demand, it is easy to see whereby prices must advance if the demand is great and the supply low.

Here, fellow members of the trade, is where still greater patience must be exercised, because there is going to be an even still lowered production in the Ottawa Valley this year, and the end is not yet. For over four years production in the Ottawa Valley has dropped and it is going to drop still lower this year. The buyer of lumber scoffs at the idea of a lumber shortage. Forgiveness again, he "don't know," and to the best of his own conscientious knowledge believes he is right when he, in a loud voice, proclaims that a "shortage" is "manufactured" for the purpose of keeping up prices or is a mere artifice. Mr. Consumer, if he took care to trail back over the last three to five years, would find as an operator, a great deal that would interest him, not only regarding the satiation of his ideas, but to the benefit of his pocketbook as well.

To begin with he would find that his camp supplies cost him substantially more each year, for the last five years. His labor charges taps him heavily in the same direction, and he is still going

"west" with labor. If he invested his money a year ago, being the possessor of limits, in stocking his camp for a winter's operations, he could look back and take in many instances, "solace" for his losses, which to an experienced operator are not invisible, but can be traced to decreased production, per man, per. day. The source is in the woods camps.

Lumberjacks Never So Well off as Today

The contentment of camp life and labor is in the Ottawa Valley today perhaps the biggest of many difficult problems that lumbermen have to face. "How can the labor situation be gotten over?" is the refrain that has been heard at more than one executive meeting of lumbermen since the war began. Still the problem remains unanswered, and decreased production results. It is not that the companies engaging the men, are not trying to satisfy them nor is it that the men themselves are not better treated and fed than they were say ten years ago. Lumberjacks today with half the salary they are getting, in comparison with the food supplied them are much better off than their forbears ever dreamed of being. Still under the improved favorable conditions to themselves they fail to produce, per man, per day, in comparison with what their ancestors did. Willingly or otherwise, they are falling down on the job. Still they expect and are receiving higher pay, better food, better working conditions, than their sires of years ago imagined. And still they fail to produce.

Without telling any tales out of school or attempting in any way to discourage lumber operators, the day of the genuine lumberjack in the Ottawa Valley appears to have passed. The years 1914 and 1915 when forestry battalions were raised in the defence of the Empire may be referred to as the period when the real lumberjack passed out of the Valley. Previously there were good men in the woods that produced results. The old lumberman's spirit flowed through their veins and it was not a question of "quitting time" as it was "getting the work done."

During the war years the drop in the quality or standard of woods labor was noted, but lumbermen persevered, and carried on with the expectation that some day the old hands would return. Lumber companies in general did not attempt to prevent the departure of their best woods workmen overseas in forestry battalions. They thought it was necessary and in the best interests of the Empire as a whole and although they had a dim idea as to what might happen, they didn't kick. Somehow or other they held to the belief that old times would return, but today they are forced to accept their cup of disappointment. It is not because they want to. It is rather because they have to.

Must School New Generation of Woodmen

Any lumberman manufacturer or operator who still clings to the once cherished hope that real woodsmen who went overseas with the forestry battalions would, after the war, come back and take his place in the woods, is "kidding himself." The writer can if he cared to, cite many individual instances of where the members of forestry battalions who went overseas are not coming back to the woods game. Instead they are taking vocational training courses, as they are entitled to, but the old lure of the "camboose," the shoepack, the swaying spruce, pine and balsam, along with the joys of the "drive," are not sufficient to bring them back to the lumbering game. They are gone and the woods is the poorer of them, but that does not help the lumber operator any. He has now on his hands the task of schooling a new generation of woodsmen, with the fond hope, no matter what the cost may be, of restoring a generation of workers, who really know how to produce.

And the public is not worrying itself over problems the lumberman has to face. All it looks at is the price of lumber, and complains because it is so high.

Systematic Survey of Empire's Forests

The British Empire Forestry Conference, which held several sittings in London, Eng., adopted the following resolutions, which the delegates are to bring to the notice of their respective governments:

Forestry Policy.—In view of the great importance to the Empire as a whole, as well as to each of its component parts, of producing a sustained yield of all classes of timber, and of encouraging the most economical utilization of timber and other forest products, and of maintaining and improving climatic conditions in the interests of agriculture and water supply, each of the Governments of the Empire should lay down a definite forest policy to be administered by a properly constituted and adequate forest service. (Mover: Mr. H. R. Mackay, Australia; seconder, Mr. E. Battiscombe, East African Protectorate.)

Survey of Resources.—The foundation of a stable forest policy for the Empire and for its component parts must be the collection, coordination, and dissemination of facts as to the existing state of the forests and the current and prospective demands on them. To this end it is of first importance that a systematic survey be undertaken in each part of the Empire which will not only serve as the basis of forest policy in that part, but also provide a means for reviewing the forestry position of the Empire as a whole. (Mr. A. J. Gibson, India; and Mr. E. H. Finlayson, Canada.)

Organizations of Forest Industries.—It is extremely desirable that the Forest Authority should be in close touch and consultation with organizations representing the interests concerned in the extraction and utilization of timber and other forest products. (Mr. M. A. Grainger, British Columbia; and Mr. W. D. Ellis, Colonial Office.)

Publicity.—It is the duty of the Forest Authority in every part of the Empire to adopt and encourage methods of education and publicity in order that the people may be fully informed of the aims and purposes of forest policy and may thus be induced to co-operate towards its successful fulfilment. (Mr. C. E. Legat, South Africa, and Sir Hugh Shaw-Stewart, Consultative Committee, Scotland.)

Distribution of Forest Plants.—The Conference have had brought to their attention the advantages which have accrued in several parts of the Empire from the wide distribution of forest plants, and desire to bring the method of encouraging tree-planting by distribution of plants either from government or private nurseries gratuitously or at cost price, to the earnest attention of their governments. (The Hon. E. Lucas, Australia, and Mr. A. J. Gibson, India.)

Terminology and Trade Nomenclature.—The following questions should be referred to the proposed Forestry Bureau immediately on its formation: (1) Standardization of forest terminology, (2) correct identification of timbers, and standardization of their trade names. (Professor R. S. Troup, India, and Mr. P. H. Clutterbuck, India.)

Research.—A scheme of research work approved by the Conference is recommended to their governments for early consideration and approval by them. This takes the form of the report form a committee appointed "to prepare a draft scheme for the organization of that research work which is essential to the progress of forestry, including both the production and utilization of forest produce, the committee to pay particular regard to the importance of avoiding overlapping and of co-operation with existing institutions." The report deals with the organization and sub-division of research, with the relation of the different parts of research to one another and to education and practice, and with the subjects of research both generally and in relation to the needs of the different parts of the Empire. (Professor R. S. Troup, India, and Mr. H. M. Thompson, Nigeria.)

Forestry Bureau.—The conference approve the suggestions and recommendations for the constitution of an Imperial Forestry Bureau which are contained in the report of a committee, and strongly urge upon their respective governments that they should contribute to the support of the bureau as therein suggested. They feel that it will be largely upon the work of such a bureau that the proper development of the forest resources of the Empire will depend, and they therefore cannot over-emphasize its importance as a part of Empire organization. (Mr. R. L. Robinson, United Kingdom; and Mr. L. Palfreman, Sierra Leone.)

Future Conferences.—The conference is convinced that the holding of conferences of representatives of the Empire on forestry matters is of great service. They desire to thank the Forestry Commission of the United Kingdom for causing the conference to be assembled and for making the necessary arrangements. They recommend that the next conference be held in the year 1923, and that, if the Dominion Government approve, it be convened in Canada. (Sir Claude Hill, India; and Mr. F. D. Acland, United Kingdom.)

No Relief of Car Shortage in Sight

Undoubtedly the most serious situation which the lumber trade of the Coast faces today is the shortage of cars and, so far as can be seen, there is no relief in sight, says a recent despatch from Vancouver. The American railways have sent fourteen hundred cars to the Pacific Coast to relieve the congestion, but when it is considered that the industry in British Columbia, Washington and Oregon uses something like 17,000 cars a week under ordinary and normal conditions it will be recognized that the fourteen hundred cars are only a mere bagatelle and that they will by no means fill the gap.

This situation has now been in existence for the past two months and it may be taken for granted that, unless some strong measures are taken, it will be at least ninety days if not more before any relief is afforded the industry in the shape of additional cars to move the lumber and shingles that have accumulated. Efforts are being made to repair some of the old cars that have been doing duty for many years, but even were everything in the shape of flat car put into commission there would not be an adequate number to cope with the present demand.

Lumbering in West is Hazardous

During the first six months of 1920, 10,285 accident cases were dealt with by the Workmen's Compensation Board of British Columbia. Of this number of accidents 73 proved fatal.

The greatest toll was in connection with the lumber industry. Out of the total number of deaths 34 were cased through the various lumbering activities, or an equal of 46 per cent. Accidents in connection with lumbering totalled 2.231. Construction work proved the second most hazardous. In connection with this work there were 770 time-loss accidents, of which 12 proved fatal. Deaths and accidents attributed to other industries were as follows: Coal mining, 549 accidents, 6 deaths; railroads, 468 accidents, 9 deaths; iron and steel industry, 3 deaths; Provincial Government service, 2 deaths; fishing industry, 2 deaths; electrical plants, 1 death; mining, 1 death.

A vigorous campaign has been carried on in first aid work, the idea being to prevent injuries becoming serious. Often the most trivial injury results in stiff joints, loss of limbs and sometimes loss of life. The accident prevention campaign is being continually waged and has proven very effective.

"The lumber industry has had such a phenomenal growth during the last year that it has absorbed a number of unskilled workmen, which accounts for the large number of accidents. It is believed that had more experienced men been available at least twenty-seven of the fatal accidents would not have occurred," he said.

Pembroke Company Gets Timber Limit

To a Pembroke company, composed entirely of responsible business men, has come the honor of being the successful bidders for the first timber limit to be sold by tender by the Drury Government.

The sale, which took place in Toronto, was attended by W. H. Bromley, one time manager of the Pembroke Lumber Company, and one of the most expert and best known lumbermen in the Ottawa Valley. Mr. Bromley and his associates will start operations immediately to market the valuable timber.

The limit itself, which is reached via the Canadian Northern Railway, lies west of Capreol, and comprises the Township of Champagne, so-called in honor of Controller Champagne, of Ottawa. Besides the manager of the company, W. H. Bromley, who, before the war, conducted a successful lumber brokerage business in Pembroke, and who went overseas with a Forestry detachment and served in various important posts in the Forestry service until the war ended, the new company includes the following local men: Jas. Fraser, Major A. J. Millar, Frank P. Shepherd, L. M. Chapman, all of Pembroke, Ont.

Five Hundred Houses Needed in Hamilton

Assertion of Dr. James Roberts, medical health officer of Hamilton, that there are but 62 vacant houses in Hamilton and that 16 of these are unfit for habitation, has not been challenged by the army of house hunters. What this class particularly wants to know is where the vacant houses are.

"I have always contended that housing and health run hand in hand," said Dr. Roberts.

"My advice to the workers of Hamilton is to economize to the utmost, to save every dollar that can be set aside and to invest in small, comfortable homes," said the medical health officer of Hamilton. "The average workingman makes the mistake of undertaking too big a burden when he purchases a home. The ornate trimmings can be dispensed with. What he should strive for is to get into a small home of his own. The jurisdiction of my department does not extend to the building of homes for workingmen. I can only point out the danger of overcrowding and congesting and advance a solution."

Building Inspector Whitelock declared recently that more than 500 houses, the number suggested by Dr. Roberts, would have to be bilt if the local housing situation was to be relieved.

"Already this year we have issued permits for 350 new houses in Hamilton," said the inspector. "Forty-three other houses were erected in the newly-annexed section in the northeast end before it was brought into the city. I would say that the number of new houses to be built during 1920 will be well in excess of five hundred. Besides these, we have issued permits for apartment houses to accommodate at least seventy-five families. There is a serious shortage of houses, but the fact remains that many houses are being erected."

Wood Construction Resists California Quakes

Recent earthquakes in California have turned the attention of the nation generally to this type of misfortune and its results. In a general discussion of these earth tremors in the "Scientific Monthly," Dr. Andrew H. Palmer has this to say with respect to the suitability of various types of construction to such conditions:

"San Francisco has learned its lesson in the matter of fire protection in a region of high seismicity. When that city was destroyed by fire in April, 1906, it was because the water mains had been broken by the earthquake and there was no water available for fire-fighting purposes. The water system has been reconstructed in such a way that an earthquake could not destroy its efficiency. But in the matter of building construction much is still to be learned. Steel-frame and reinforced concrete buildings will stand through a severe earthquake. Wooden buildings, too, will remain unharmed in the destructive shocks since they will yield to strains. Brick and concrete-block buildings are easily destroyed. But the most dangerous type of construction is the primitive adobe, which is still in use among Mexicans and Indians. The lives lost in the Imperial Valley earthquake of June 22, 1.15, resulted from the collapse of adobe buildings."

No Drop in Lumber Prices Expected

A fear of paying too much for lumber and the hope of an immediate or near future decline in the price of building material has caused many to hesitate building, according to recent advices from Regina. That these fears are groundless and that the alternative of a higher lumber price is more likely is pointed out in detail in the following paragraphs.

This fear causes hesitation and by hesitating people are gradually adding to the congestion of the housing situation which is already serious.

A thorough investigation of the lumber situation brings out some startling facts relative to the cost of production.

Lumber is made from logs. Logs must be cut. Cutting takes labor, and labor is high. There is the A.B.C. and the Crux of the whole situation.

Logging camps are operating eight hours daily in place of ten hours, as formerly—yet paying the men more wages.

Sawmills are operating 50 hours weekly in place of 60 hours. Wages increased 20 per cent. over and above the time changes.

Raiway freight rates increase 25 per cent., and lumber requires long hauls.

Wire rope, logging machinery, camp supplies have increased up to 300 per cent.

Mill supplies and equipment increased from 100 per cent. to 300 per cent.

Towage rates increased 100 per cent.

Government royalties increased 50 per cent.

Fares of loggers going and coming from camps increased.

The fringe of the forest is being clipped. Lumber must be hauled further and from deeper recesses, not as accessible as formerly.

Every condition and item that enters into the cost of producing the finished article has jumped enormously since 1914-15. These increases and their ever-climbing habit precludes any drop in the cost of lumber. It rather makes a most desirable purchase at the present price and an actual investment when put into a house.

The questions of further increase in freight rates, supplies, wages, etc., etc., enter into and make uncertain the price of lumber.

The house shortage at the present time is caused to a certain extent by the hope that the cost of building would make a decent. The above figures are convincing evidence of the futility of waiting. Act now! Build now!

The Proper Way to Sell a Saw

A book of extraordinary interest has just been published by E. C. Atkins & Co., manufacturers of Atkins Silver Steel Saws, on "How To Sell a Saw." It is devoted entirely to the one subject, and although the underlying principle is, how to sell a saw, practically all of the material can be applied to the general line of hardware.

The book is very attractive, suitable for library use if desired for that purpose. It has a Castillian cover embossed in gold, is easy interesting reading and has plenty of illustrations. Any retail, dealer or jobber, who is interested in increasing his sales is leaving a large stone unturned in his endeavors when he does not have one of these books to read and study. E. C. Atkins & Co. will send one to any clerk, dealer or jobber who will write them that he is interested.

New Publication by National Lumbermen

"The Lumber Bulletin" is a new monthly publication issued by the National Lumber Manufacturers' Association, 750 McCormack Bldg., Chicago. It made its initial appearance in August and contains much timely information on lumber statistics, transportation, legislation, lumber economics, forestry and other subjects. It announces that it is a "lumber paper written by a lumberman for lumbermen" and is not a house organ in any sense. In brief, the new medium is described as a short cut to information about the lumber industry and will endeavor to present facts rather than opinions.

Im Nearlee Pass on Nudder Side de Riviere

Lac au Loup, Que.,
Aout 14, '20.

Editor Lumbermans Canayenne,—

It are quite some tam since Im sen you lettre an mebbe you t'ink p'raps Im pas on nudder side de "riviere."

Well, Im not pass complete 'cross dat riviere but Im come pretee near do so an w'en Im make explanations you go'ne nudder-stan w'y Im not write before.

You see, Hole Dear, last Winter we have hard job get de mans for de t'ree camp an it take me more as a mont' before Im have dem go full blas'. Im hire de mans from any place it can be foun' an we get some fonny feller too. Im not go to mention we're dose feller come from but Im go'ne tell you w'ere some go'ne stop eef d'ey try play more dose trick on Caspar Lamarche.

De mos our troub' are on Number T'ree camp for Im have ma fren on nudder two camp an because Im not have 'nuff fren for go all roun'. Im put de stranger on de Number Tree.

Poleon Laframboise are de Boss on dat camp and Im go'ne tell you he have a job on her han'. Byme bye he get tire' an tell me he go'ne work wit me on de Number One camp so Im lef her go an put Hector McKenzie wat are now ma brudder-law becaus he marry Mercedes de sister dere ma wife; on charge.

Hector he begin all right, but he make de bad feenish an pretee near make ma feenish also an now Im go'ne tell you w'y.

We have few mans on dat camp who say d'ey go'ne reform de whole contree an d'ey begin reform on ma camp by tell nudder mans d'ey not get 'nuff pay, an work too hard, an too long hour, an some nudder feller who are not do nutting are get mos' de profit and leff dem do all de work.

Poleon he try for do mos de work her'sef but he can' stop dose feller make de spich for d'ey tell her eef he fire one dose mans de res' go'ne quit also. Poleon he 'fraid lose her gang an he know it are hard job get de mans for de Bush, so he not say nutting but he aks me take her on Number One Camp w'at Im run me'sef. D'en Im place Hector on dat camp an in few day he are make de worse sp'ich dose nudder feller an Im spen' few day wit' him an den Im fire 'bout ten mans w'at are make de sp'ich. Hector are one of dem an Im spose Mercedes not go'ne like me any more she do after Im give Hector lesson on "politesse," but it not make me change de min' for de Beeg Boss on Toronto expec have plentee log for saw on de Spring an we not able for make dem eef de mans spen' d'ere tam make de sp'ich.

After Im do dat Im expec have leetle more quiet an few more log make on dat camp but Im make one beeg mistake. I'm k'ip one dose feller wat are de meaner mans Im never see.

He fall a tree on me.

Dat are principal reason you not get lettre from me for few mont'.

De Boss from Toronto he get me good room on Hopital an after 'bout one mont' Im begin enjoy mesef for Im have de mos fine young woman for give me 'tention, but it take quite some tam for feex ma leg w'at are bus' on two place, an few rib w'at are ben' too much, also Im have crack on ma head wat make me leff ma hat on de house today for it are still sensetive.

Say, Im go'ne tell you Im got de good Boss. Not becaus he pay me all de tam Im not work, an pay ma room on de Hopital an de t'ing like dat, mais, becaus he k'ip de eye ope' for dat feller w'at pile a tree on me an we'n Im leave de Hopital las' June he sen me word dat feller are work on asbest' mine not veree far fram Lac au Loup. An it are mos' curious t'ing how dat feller quit her job an go make visit on de same Hopital w'ere Im spen mos' five mont'. He mebbe not get so good room like Im have an dat are sure t'ing he not have de same "garde malade" Im have for she not 'custom take care de dog, but he gone have good attention jus de same an mebbe p'raps eef he are luckee he go'ne get out on tam for make de sp'ich nex' Winter, but not on one ma camp.

Im not do much work dis Summer for de reason Im jus mention but Im k'ip de eye on w'at are do by de res' an Im fine some dose sp'ichmaker on de Drive an some work on de Mill an Im be sure we go'ne have some troub' some day soon. W'en it begin Im wish Im feel better as now for it require good mans like Caspar Lamarche w'at have keel a bear w'it her two han's becaus it eat her calf one tam, for settle dat question.

Im nearlee forget tell you 'bout ma "garde malade" w'at are attend me on de Hopital an wash ma face t'ree, four tam a day an boss me all de tam, an make me take de bad medecine an w'at are cause ma wife Glorianna for take a room close on de Hopital so she can kip de eye on me.

Well; she have get de good pratique nurse de soldier en France an it not bodder him 'tall for look after me, an w'en she change de dress on ma leg or de crack on ma head she tell me bout dose nudder feller wat are loss two dere leg an dose nudder feller w'at are have de shot on de face, an it k'ip me lissen on her an Im not feel so much. I'm not go'ne tell her name but Im tell you d'is, she are one ma fren' an one de fren' ma wife Glorianna an nudder ting, we have de bes room on our house on Lac au Loup feex up for her any tam she make visit on our place.

W'en Im on de Hopital she come on ma room an say, "Caspar, It are quite some tam you not have your pousse feel," or, "Caspar, It are quite some tam you have de good sl'ip," an' Im like dose word an use it w'en Im get de chance.

Glorianna are not jealous for she know dat "garde malade" are go'ne be marry soon on one feller w'at she make over agen en France, an who are go'ne be doctor. He better ope' de office on Lac au Loup an he go'ne get lot de pratique eef dose feller try make de sp'ich some more on ma camp.

Mebbe, p'raps de Boss are go'ne allow me plaster de Hole Number T'ree camp nex Winter, an put de bat' on her an have be Smokingroom, an bout hundred bedroom wit' de brass bed an have de Butler an Waiter an few pretee chambermaid for attend on de mans. An we furnish de cigar an leetle tonic once a w'ile, for satisfy dose feller w'at are like make de sp'ich but not like work 'tall.

It take a damfool for t'ink he work onlee seex hour a day on de Bush an t'ree hour on Saturday, w'en we pay de beeg pay on de mans, an for hay an provision, an d'ey not like for eat porkanbean now an molasse but mus' have de fresh meat an butter an egg an de fine pie an cake, an dat are jus' w'at we are feed d'em for long w'ile now but d'ey not satisfy. D'ey not like do any work 'tall, onlee draw de pay.

Ba Gosh, Im gone satisfy dose feller, an Im tell you now, de nex feller wat are try for fall a tree on me bes' be sure he make good shot for eef he make de miss, he go'ne right t'roo an see nudder side dat "riviere" we're Im stop half-way. He not go'ne make de stop on Hopital 'tall, an it go'ne be quite some tam before he make some more Sp'ich.

Bien a vous,
Caspar Lamarche.

The large pulpwood stacker of the Sturgeon Falls division of the Spanish River Pulp & Paper Mills

Simple Way to Solve Big Problem

By "Pine Knot"

There are many well-seasoned veterans in the sawmill trade, to whom the suggestion contained in this article will be not only a valuable aid to better work, but an eye-opener as well. It is the experience of the writer that where trouble arises with the sawing, the blame is laid on everything (principally the saw) before the real source of the poor work is discovered or acknowledged.

When I say veterans of the mill trade, I mean more particularly those men who have had a long varied experience in the care and operation of large circular saws in sawmills that range in size from the light powered mill relying upon the capacity of an old fashioned over-shot water wheel, to the very modern, up-to-date mill with its high pressure steam power plant, and its steam appliances for operating the carriage, "nigger," etc.

In the majority of cases these represent the best that money can buy. The finest saws, and the most cleverly designed machinery that human ingenuity and skill are capable of producing. And yet, with all these facilities at hand, and

Fig. 1 Fig. 2

the skilled knowledge of an experienced operator to fall back upon, it not infrequently happens that a new circular saw from a maker who has acquired a world-wide reputation for good saws, will disappoint both the owners and operators.

Notwithstanding the fact that the saw is perfect in material, temper, and workmanship, and is fitted in the best possible manner by a painstaking and competent filer, they will not turn out as large a quantity of well-manufactured lumber as had been anticipated. The saw is sensitive, runs in and out of the cut, becomes hot on the rim, and makes uneven lumber —especially when the log is fed on the saw at a moderate or fast feed.

Nothing goes wrong without a cause, and while there are many causes for the saw not "standing up" as it should, the odds are in favor of laying the trouble, in the case of a circular saw, largely to the saw guide.

A saw guide, while it may be held firmly in position, is not always placed in the proper position. Usually it is found that the guide has been placed too far below the cut, which allows the saw to be deflected from a straight line before the guide has really had an opportunity to support the saw. The guide should be placed in a position that will bring the jaws as high as they can be placed, and still allow the head blocks to pass over (see figure 2). This simple change in the location of the guide will enable it to properly support the saw, and prevent its being deflected from a straight line.

In the small or portable saw mills, the builder, as a rule, puts a 4, 5, or 6 inch collar on the saw guide so as to bring the centre of the guide just on a line with the centre of the collar (see figure 1).

This is a method of placing saw guides in position, that has been employed for many years. But years ago, a saw mill man used a much thicker saw than he is willing to use now. And while it naturally follows that a thick saw plate is steadier and will stand up better than a thin one, consequently the thick saw did not need as much support from the saw guide as the thinner one, and the saw guide was placed below the centre of the saw.

If, instead of this, the guide was placed so as to bring its centre directly in line with the top edge of saw collar, the saw would get a great deal more support from the guide, and "stand up" better in making slab cuts.

It would be easier to operate, lessen the percentage of miscuts, and give much better service generally for the work of cutting is all done above the centre of the saw. While I have found some mill men who objected to raising the guide because of possible interference with knots, I can say, positively, that if the proper attention is given to setting a log in position on the carriage there can be no trouble from this source. Turning the knot up carries it away at once, and after the first cut there will naturally be plenty of clearance.

During my early experience in the construction and repairing of millions of saws I once spent two days carefully studying out a mill where the circular saw refused to cut properly. Accidentally I discovered that shortly before the trouble began the old guide had been replaced by a new one. Repairing and setting up the old guide again, banished the trouble that I had not been able to remove in two days' search. Then and there I determined that I would always go to the guide first when called in to "doctor" a mill. I have gained a lot of experience since that time, but to this day my first move when looking over a circular saw mill is to note the position of the guide.—Disston Crucible.

Quebec Inaugurates Aerial Surveys

Although the St. Maurice Forest Protective Association was the pioneer in the matter of employing aeroplanes for forest protection, the work is now being carried out on a larger scale by Price Bros. and the Laurentide Company. The Province of Quebec, through its Lands and Forests Department, is also using aeroplanes, not only for protection work, but for the purpose of surveying and mapping out the country by means of aerial photographs.

By arrangement with the Dominion Air Board the Department has organized an aerial patrol and forest survey of the basins of the Chamouchouanne and Mistassini Rivers, covering 12,000 square miles. Already two machines have been in operation since the first week of July, taking photographs of the forest conditions. At the same time they are patrolling for forest fires. The Dominion Air Board expects to receive soon an F. 3 flying boat from England, which will carry ten passengers. In addition to the aerial patrol, the Quebec Lands and Forest Department has several land parties travelling in canoes making also patrols and forest inventory work. Mr. G. C. Piche, chief of the forest service, is of opinion that this experiment will give satisfaction and demonstrate that, for the reconnaissance of forest conditions in the northlands, the aeroplane is the only vehicle possible.

The Minister of Lands and Forests, the Hon. Mr. Mercier, intends to fly from Roberval, which is the base for flying operations to Lake Mistassini, and Mr. Piche will also make the journey.

Releasing Energies Within the Crowd

The real leader in industry to-day is not the man who substitutes his own will and his own brain for the will and intelligence of the crowd, but the one who releases the energies within the crowd so that the will of the crowd can be expressed.—Charles M. Schwab.

My Creed of the Out of Doors

I believe in the wonder of the out-of-doors, in the inspiration of the stars, and in the allurements of life in the open and

I believe in the strength of the hills, in the silence of the night, and in the music of the birds and trees.

I believe, also, that my body was made for action, that my mind for loving in unison with the life in nature.

I believe that to laugh and sing, to swim and walk, to study and play, to eat and be happy, to be kind and free, to grow strong and good, is my God-given right.

I believe too, that to be happy, I must be good, that to be worthy I must be kind, that to be loved must think love.

I believe that God is as near as man, that I can hear Him in the brooks and pines, and that happiness and lasting peace are mine, as I live in the atmosphere of kindness so near me in the life of the open world.

Rudolph Carl Stoll.

Heavy Output of Canadian Plants

Here is the daily output of a number of the leading pulp and paper companies of Canada:

Manitoba Timber Berths Will be Sold

Seventy-five square miles of Dominion Government timber limits in Manitoba will be put up for sale by auction early in the fall, according to A. F. Crowe, Crown timber agent. This is the largest area of timber to be sold in Manitoba in ten years. The area comprises three berths of 25 square miles each located on the east side of Lake Winnipeg, on the Bear River and on the Maskawa River, 90 miles north of Winnipeg. The sale will take place in the timber agent's office in Winnipeg.

New Steamers Ready for Service

Canadian Prospector, the fourth 8,400 ton steel steamer built at the Coughlan yards, Vancouver, for the Canadian Government Merchant Marine was given her sea trials on June 11th. The new vessel is sister ship to the Importer and the Exporter, both of which are now plying in the C. G. M. M. service between Vancouver and Australia. The other vessel, the Canadian Inventor, also a sister ship, is now at the government docks practically ready for sea. Another vessel, the Margaret Coughlan, built by the same firm, will have her sea trials and load railway timbers and ties at Genoa Bay, Vancouver Island, for U. K.

How Feed Market is Shaping Up

Conditions in the feed market are dependent more or less upon the possibility of the war scare. The recent successes of Poland have altered matters somewhat. If the case of war should arise the conditions with reference to feeds of all kinds would be very much worse than that in 1914 as there is at the present time a pronounced shortage. Apart from this possibility we would make the following observations:

Alfalfa—Material lowering of present prices may be expected.

Hay.—The present situation is affected more or less by the supply of cars and the market is now at about its low level.

Bran.—This is largely influenced by the wheat situation and it is advocated that purchasers only supply immediate needs.

Oats and Corn are governed by very much the same conditions and lower prices are probable, except in the case of war as mentioned above. Generally supplies to cover immediate needs only are advisable with the exception possibly of hay that will not likely run any lower.

Freight Advance to Atlantic Ports

Following recent arrangements by which export rates on the Canadian railways should be kept on a parity with those in the United States, an order lately received by the Montreal Board of Trade Transportation Bureau giving instructions for the increase of freight rates from Canadian shipping points to the ports of Montreal, Quebec, St. John and Halifax, by which the Canadian Railway Commission authorized the increase of such rates for export to equal those obtaining in the United States for export purposes. It was stated that this order followed previous orders regarding increases in rates, so as to preserve the parity between Canadian and American freight rates, and it was intended to see that export rates for the Atlantic seaboard should be the same as export rates in the United States. This regulation, it was explained, was necessary under the agreement, since if a similar increase was not granted in Canada American exporters might use the Canadian lines to the detriment of American lines, so as to secure the advantage of lower rates.

Mangrove Wood Impervious to Decay

The wood of the mangrove tree which grows abundantly in French Guiana, is said to be impervious to rot; at least, it has not rotted under the severest tests given it for four years by a French railway company. The grain of the wood is so close that it practically excludes moisture and it has the further protection of a large amount of tannin in its composition that prevents the invasion of insects and protects it from mold, damp, etc. Its discovery is important, especially to users of railway ties and telegraph and telephone poles.

Utilizing the Waste Mill Slabs

The great increase in the use of paper and the resulting great demand for pulp has opened up a very profitable new business for saw mills in the utilization of the waste slabs.

Nearly all saw mills today either burn the slabs under their boilers or simply throw them away. Now the more progressive and far-seeing mills have equipped their plants with slab barkers. These will remove the bark from the slabs and leave them in a condition to be used by the pulp mills.

The result is that this formally useless by-product can now be used in increasingly large amounts by making pulp.

Among the mills now using this barker, made by the Canadian Mead-Morrison Co., Ltd., of Montreal, are the Jackman Lumber Co. of Jackman, Que., Kellog Lumber Co., and John Lumber Co. of Maine.

There is now being designed a train of machines to make chips for pulp mills right at the saw mills. There will be four of these machines, the barker mentioned above, a chipper, a crusher, and a chip screen. The chips will be sent to the pulp mills in bales rather than by bulk.

Lost 1,500 Cords of Pulpwood

Mr. W. H. Russell of the Russell Timber Company, Port Arthur, Ont., recently returned from Ashland, Wisconsin, where he went in his yacht PomPom on a search for a missing raft of 1,500 cords of pulpwood lost off Outer Island about the first of the month. On the return ttrip the shore line was skirted for miles but no trace of the wood was found.

May Use Bamboo for Paper Pulp

The scarcity of newsprint paper gives special interest to the statement that edible and timber bamboo are both adapted to the climate of the Gulf states and are in a position to aid materially in the production of paper. The difficulties which exist in transforming tropical grasses, reeds and rushes into paper are said not to apply to bamboo; and bamboo, unlike the great forests of the temperate zone, grows rapidly so that the supply of paper material would renew itself from season to season. Burma is one of the tropical countries where bamboo is very abundant and it has also necessary facilities for transportation. Not only is the bamboo of rapid growth and some species attain a great size, even 70 to 100 feet in height with trunks a foot in diameter, but it is often found in arid localities which would otherwise be destitute of vegetation.

Lumbering Activities in Fraser Valley

Evidence of the important part lumbering and its allied activities play in the affair of B. C. is afforded by the many camps and mills throughout the Fraser Valley, B. C. Old timber lands are being worked over again, and the world-wide demand for lumber and forest products which characterized the war period, and which still prevails, is reflected in the volume of business being done in these lines.

A typical mill is that of the Campbell River Lumber Company, near White Rock. The concern operates several camps to secure its own logs, and has lately increased its capacity fifty per cent. to 150,000 feet daily. The power is electrical with the exception of the head-saw equipment. The company is providing cottage homes for its married employees.

Another large mill recently remodelled and equipped with the very latest machinery, electrically driven, is the Hammond Cedar Company's big plant at Hammond. This company also is helping to solve the housing problem for its employees.

The Dominion Shingle and Cedar Company, Ltd., has replaced the big plant on Lulu Island, near Eburne, burned down last September, with a mill equal to the best in the province, and operates 14 machines at Eburne and ten at other centres in the Fraser Valley. The Abbotsford Lumber Co. has an output of 90,000 feet daily, and specializes in large timbers for the rail trade. This concern employs 230 men.

The Beaver River Lumber Co., with a numinal capacity of 70,000 feet per day, tops the 74,000 mark some days at its mill alongside the B. C. E. Railway some 30 miles northeast of New Westminster, and with a subsidiary concern at Sullivan employs over 100 men. Other concerns swelling the output include the Popcum Co., ten miles east of Chilliwack; the Vedder Crossing Co., west of Vedder Mountain; the Promontory Sawmills, Sardis; Clayton Co., nine miles east of New Westminster; McLean and McKay Co., two miles south of Cloverdale; which is opening up a new stand of 3,000,000 feet near the mill; Galbraith and Sons' Lincoln mill, with four miles of logging railway; Wolverine Co., two miles south of Lincoln station; Craig-Taylor Co., near Otter Station, with a capacity of 60,000 feet daily; Anthony A. Rerrie Co., two miles north of Aldergrove; the G. B. King Co., operating at King station, which under the new name of the King-Farris Co., has lately acquired 125,000,000 feet of spruce and fir, including the magnificent tract known as the Big Green Timber near Cloverdale; the Lombard Co., at Langford on the B. C. E. R., and a host of smaller outfits and shingle mills scattered throughout the Valley.

Housing Problem Puzzles Vancouver

Commenting on a recent decision of the city council of Vancouver not to continue the advancing of money on home-building, under the province's loan system to returned men, the Daily Province remarks editorially:—

City authorities are occasionally invited to take some action against the advance in rents on the houses occupied by working men. The city would be in a better position to intervene if it had not confessed its own inability to provide cheaper houses with the money offered by the Dominion at low interest. It has been explained that houses so built and sold without profit to families with payment made as rent over long periods would cost the worker more than he could afford to pay. The inference is that the working men can better afford to rent houses at the present prices than to accept the best terms the city could make under the most favorable conditions. This is poor encouragement to investors to build houses to be rented even at present prices, and no encouragement to workers to build homes for themselves. It would have been well worth while for the city government to take hold of this housing project and work it out promptly as far as the money went, while labor and materials were lower in price than they are now. Even at a later stage it was a weakness to accept a partial failure.

Budget of Briefs from the West

The Napier Lumber Company, recently organized, and which has secured limits carrying five or six million feet of timber at Kobsilah on Vancouver Island, from J. Boal, is now busy on erection of a mill. The location is on the C. N. R. tracks near the King Solomon Mines two miles from Kobsilah River bridge. The capacity of the mill is to be 20,000 feet per day and it is intended to have it in commission at an early date. The principals in the new concern are Mr. J. D. Patterson and Mr. S. A. Werry, of Vancouver. Mr. Patterson was at one time mill superintendent for the Canadian Pacific Lumber Co., Ltd., Port Moody and Mr. Werry has been for years connected with mills in the Kootenay.

Building permits issued in the city of Vancouver for the seven months to the end of July, totalled 994 in number and $2,294,567 in value. This nearly doubles the 1919 building record for the same seven months, which was $1,224,326 in value, though 693 permits were issued. For the month of July, the total value of permits issued was $669,292, the number of permits being 138. For July, 1919, there were 107 permits issued, the total value being $488,855. The 1920 records so far have exceeded those of any year since previous to the war.

Big Increase of Gross Profits

Gross profits of the Brompton Pulp and Paper Company, Limited, East Angus, Que., for the first six months ended April 30 last of its current fiscal year amounted to $945,285, against $517,355 in 1919, an increase of 84 per cent. Net profits after fixed charges, but before depreciation, were $873,830, against $413,118, an increase of 111 per cent. These facts are reported in Greenshields and Company's Monthly Review, which has the following to say.

"This represents earnings at the rate of 22.9 per cent. per annum on old common stock, or $11.45 a share on the new. Provision must be made later for depreciation, taxes, etc., in view of the upward trend in prices of pulp and paper. It is well within the possibilities that $12 a share will be earned on the new stock for the full year after all deductions.

"There remains a surplus from the first half of the year after deducting dividends on both preferred and common, $593,830. This will cover, with about $20,000 to spare, bond interest, preferred dividends and dividends on the common stock at the new rate for the remaining half of the year.

"In other words, any profit earned within the six months from April 30th to October 31st will be available for depreciation and surplus accounts."

A fire on Gambier Island, Howe Sound, twenty-five miles from Vancouver, destroyed a good deal of timber in the limits being worked by the McLeod Logging Company. There is estimated to be 1,500,000 feet of standing timber, most of which fortunately escaped injury. Mr. D. A. McLeod states that even the portion damaged by fire may be logged off without heavy loss. Some eighty men are employed at the camp, and they were all quickly employed in fighting the fire, which was got under control in a few days.

Even rural municipalities are being stirred up by the ratepayers —who are also voters—over the question of cinders and smoke from saw and shingle mills. Surrey council, whose district is south of the Fraser River opposite New Westminster, had under discussion recently the question of a shingle mill in the little village of Cloverdale. Letters from housewives asserted that even screens did not keep out the cinders and dust from the new Smith & Hutton shingle mill. The members of the council agreed that it was likely residents might be inconvenienced by such an industry erected in the village, but they took no action.

West Vancouver, across Burrard Inlet from the city, has a soldier housing scheme under way. A plan of agreement between the soldiers interested and the municipality has been forwarded to Victoria for the approval of the provincial government, as the funds are advanced under its soldier housing scheme. Eighteen men have made applications to participate and a committee of the local G. W. V. A. will work in conjunction with the council to carry out the scheme. A building supervisor is to be appointed to look after the actual construction of the dwellings.

One of the worst forest fires on the coast so far this season burned the camp of the F. M. Norton Logging Co., on Raza Island near Lund on Aug. 7th. Much damage was also done to the standing timber before a sufficient force could be collected to fight the fire. A large quantity of logs which had not been put in the water were destroyed. The fire ran over more than 2,000 acres, though much of the green timber escaped injury.

Under a decision recently handed down by Mr. Justice Morrison of the British Columbia courts, F. J. Finucane, of Spokane, Wash., secures judgment for $8,440 against the Standard Bank in a suit heard in Vancouver last spring. The Rainy River company hypothecated certain securities to the bank and subsequently borrowed $50,000 from Mr. Finucane, agreeing that he should receive $10 per ton out of these securities on all pulp manufactured by the company. The company was paid for the pulp made, but the bank refused to turn over the money to Finucane. The suit turned on whether the bank was a party to or bound by the Rainy River Company's agreement with Finucane.

Mr. Retailer! Have You Good List?

Do Not Let It, However, Crowd Out Your Newspaper Advertising or Personal Relations with Trade

One of the most inexpensive forms of advertising, quite effective if done in the right way and yet a method that has been comparatively little used by the retail lumber dealer or line yard manager, is the circular letter, regularly issued.

By being regularly issued, we do not mean a letter gotten out on the same date each month, but rather, a letter issued as each building season demands it. The letters themselves may easily be gotten up. The problem to be solved first is getting a mailing list that is both up-to-date and containing the necessary information about each prospect, says the "Long-Bell Bulletin."

The information necessary will vary with each community, but in general it will divide itself into the two general classes of town people and farmers. Each prospect should be listed according to the buildings he has or is likely to plan. Prospective home builders come first and probably will be the largest sub-division. Then there are prospective customers for remodelling, for oak flooring, for barns and implement sheds, for farm fencing and for garages.

Why is so much detail necessary? You don't want to send garage letters to men who have no automobiles and are not thinking of purchasing cars. A farmer who has just erected a new barn and is rather proud of it wouldn't care much about receiving a letter advising him of the advantages of a modern barn. A circular letter serves its purpose best when it reaches a prospective customer just at a time he is most apt to build the very thing described.

A Western yard manager, although he sends out no circular letters—preferring to see each customer personally—has a very complete index. He lists prospects on a card system, including their name, address, location, what and when he intends to build, and how this information was first obtained. Many a dealer or yard manager has just this sort of information in a notebook, but not in an easily accessible form that encourages him to have circular letters prepared and envelopes addressed for occasional mailing to the trade.

Any handy card index system will answer the purpose of providing accessible mailing list data. Probably the best way of arranging a small mailing list is to file alphabetically. It is little trouble to go through several hundred names and pick out the ones to whom a certain circular letter should be mailed. The point is to have a list in such form that changes and additions may be made easily, and so that the mailing of one hundred or more letters at any time will not be a difficult job.

The up-to-date mailing list assures the most intelligent distribution of letters and enclosures. Home building, remodelling, farm building and fencing, corn cribs, implement sheds and poultry houses are subjects that should be represented in circular letters to the trade this fall.

No matter how complete your mailing list or how regularly you use it, do not let it crowd out your personal relations with the trade, or your newspaper advertising. Circular letters are merely supplemental advertising. They follow your personal acquaintance by talking about one building operation, and reach a circle of prospects that you cannot see personally as often as you can send circular letters. Local newspaper advertising remains the best and most effective medium, but its effectiveness is greatly increased by advertising a building operation in the newspaper and then following it up with a circular letter on the same subject.

An Expert in the Angling Game

L. H Richards, Sarnia, Ont., and his 17 pound pike

L. H. Richards, of the R. Laidlaw Lumber Co., Sarnia, who accompanied the Ontario Retail Lumber Dealers on their recent annual outing to North Bay, left Chaudiere Falls on August 2nd to return home. He went round by Sudbury and spent three days on the lower French River. There he had extraordinary good luck fishing and caught a seventeen pound pike in the Pickerel river. The fish is seen in the accompanying photograph and is 41 in. in length and was landed with a hook and line. It made mighty fine eating. Mr. Richards did not have much success in fishing while with the boys at Chaudiere Falls but by his subsequent feat a day or two later showed his ability to play a lone hand in the angling game.

Ontario Forestry Branch Extended

E. J. Zavitz, Toronto

The Woods and Forest Branch and the Forestry Branch of the Ontario Government have been amalgamated. The Forestry Branch will now care for the fire ranging and all matters pertaining to reforestation. E. J. Zavitz, provincial forester, has been placed in charge of the new organization. Mr. Zavitz has had an extended experience in matters of this kind and is well qualified for the new and responsible duties upon which he has entered. Mr. Zavitz is looking into the question relating to log measurements, etc., with a view to introducing such methods as may be expedient and in the public interest in the administration of the timber lands and collection of dues, etc. The Royal Commission which is investigating timber matters in the province is still at work and will be for some weeks yet.

Hon. Beniah Bowman, Minister of Lands and Forests, recently stated that until a final report of the Commission was made he could not say definitely just what the conclusion would be in regard to changes in methods of administering the timber resources of the province. There would doubtless be, he added, a much improved system in regard to the handling of these matters.

Look at the Hat—Not the Girl

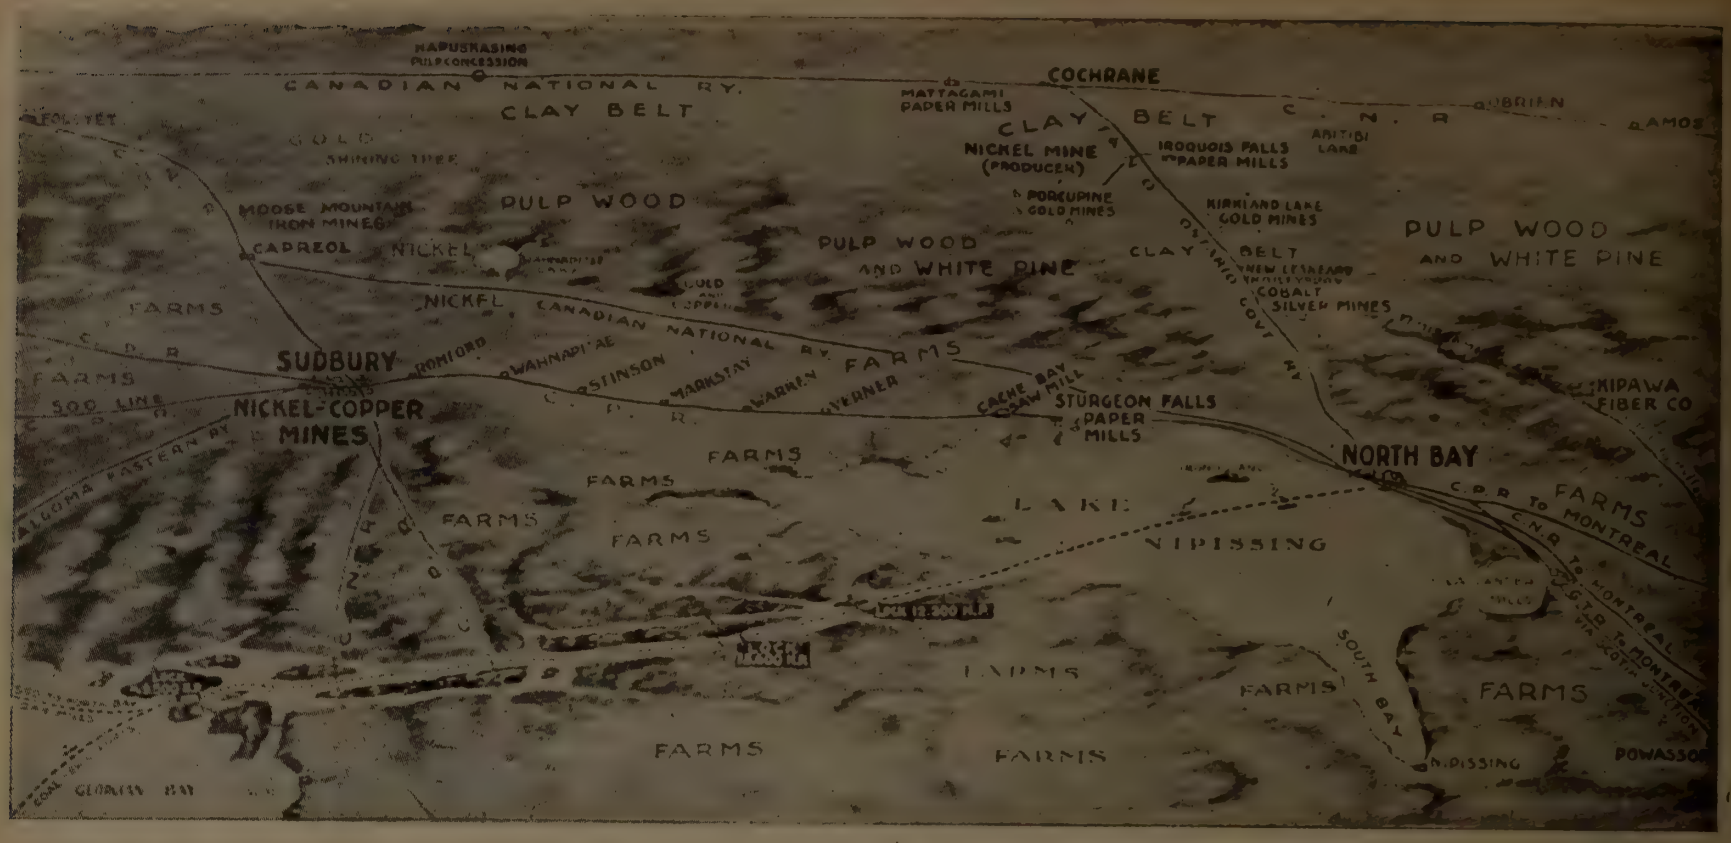
An artistic millinery creation of wood

Styles change rapidly and radically in millinery where new shapes materials and trimmings may be ushered in one day and out the next. For some years there have been wooden shoes—sabots—and we have wooden heads—as any boss can tell you—but, at least, we have reached the most picturesque and striking novelty of all, which will be of peculiar interest to young lumbermen, who have not yet joined the ranks of the benedicts. The innovation is in the way of a new type of headgear and is known as the wooden hat. It is creating its first furore in Paris, where one of the original models was sent on the day of its creation. The others are in the possession of Miss Clara Moores, star in "Shavings," who is shown here; and another actress in her company, Miss Eleanor Martin who is well known. On the opening night of "Shavings" a tired New York designer, N. C. Smolin, sat in the audience with a French maker of hat styles. A floor full of shavings in the play gave Smolin an inspiration. The next day he executed a hat made of fine wood shavings blocked into a smart shape, dyed a fashionable color and enameled. This model ter to drop a few shavings for their millinery creations.

Next you may expect to see a bevy of excited maidens hanging around buildings under construction, anxiously waiting for a carpenter to drop a few shavings for their millinery creations.

See What Our Fathers Did!

"Therefore when we build let us think that we build forever. Let it not be for present delight, nor for present use alone. Let it be such work as our descendants will thank us for, and let us think as we lay stone on stone, that a time is to come when those stones will be held sacred because our hands have touched them and that men will say as they look upon the labor and wrought substance of them, 'See this our fathers did for us.'"—Ruskin.



The accompanying map shows the rail and water route which was taken recently by the members of the Ontario Retail Lumber Dealers' Association on their annual outing. The illustration also affords some glimpses of the network of railways, pulpwood lands, sawmills, mines and other activities of the great north. The dotted lines running across Lake Nipissing from North Bay to the first lock on the French River indicate the water trip taken by the lumber merchants. The first lock at Chaudiere Falls is where such excellent results were obtained in fishing. On the north side of Lake Nipissing the location of Cache Bay and Sturgeon Falls, at which towns the lumber dealers also spent some time, is clearly revealed

B. C. May Find a Market in Spain

Representative for Spanish Paper Mills Seeks Pulp and Timber for Supplying Annual Demands

COMMISSIONED by an association which is consortium of all the pulp and paper mills in Spain, Senor Augusta Ramoneda of the Spanish city of Barcelona is investigating the possibilities of the British Columbia market as a source of supply for the paper mills of his country. Mr. Ramoneda arrived in Vancouver in July, after having spent some time in Montreal and Eastern Canada. While in the east the results of his study of the possibilities of building up trade in pulp and timber exports from Canada to Spain, led him to decide on opening an office in Montreal under the name of Ramoneda Brothers. He was also able to conclude the purchase of two cargoes of wood pulp for shipment from eastern Canadian mills to Spain, which will be some relief to the pulp and paper shortage which has become somewhat acute in that country.

The annual requirements of the whole of the Spanish paper mills run into 60,000 tons of pulp, all of which in the past had been imported from Scandinavia. With conditions in the northern European countries M. Ramoneda is quite familiar, having frequently visited them and made a study of their forest output. Prior to the war Austria was to a small extent also a shipper of pulp to Spanish paper mills. Since the war there has been such a radical change in conditions due to the acute reduction of the ordinary timber supplies in all European countries during the period of the war, that today no assured supply can be got. Demands have doubled from England and from France, both of which countries denuded their existing forests of any commercial timber anticipating ordinary cutting by several generations. Germany is coming back to the position of a customer for Baltic products and Russia is out of it for the present as a source of supply. Hence Canada can look forward to a very greatly increasing her timber exports to all European countries.

"I have not yet had the opportunity to examine your forests though during the next few weeks I am proposing to spend some time traveling through them," said M. Ramoneda to the "Canada Lumberman." "I am not, therefore, in a position to express an opinion or to make a comparison with the forests of the Scandinavian peninsula, with which I am familiar, but from my trip across British Columbia and what I then saw, it seems to me that you are in a very strong position in having such vast and valuable timber resources."

Regarding the possibilities of timber export to Spain from Canada, Mr. Ramoneda was of the opinion that one thing which would have to be arranged was straight cargo shipments. Parcel shipments could hardly be arranged in the absence of direct steamer service. The same would apply to exports of pulp to his country. With regard to that, he explained that no single paper mill in Spain would be in position to buy cargoes, and as the shipment of parcel consignments was not possible, the expedient of forming a consortium of all the mills had been resorted to. He had come as the representative of this organization, and as it was a merging of the financial strength of all the concerns they were in position, through the agency of the Royal Bank of Canada, which was established in Barcelona, to satisfy exporters as to their financial standing. With respect to finances, Mr. Ramoneda pointed out that cash against bill of lading was hardly to be expected with such heavy purchases as cargoes of pulp, running into millions of dollars. He thought Canadian producers, in order to foster export trade to all European countries, not alone Spain, would have to arrange terms of credit. He instanced the Scandinavian countries which had always followed that practice, and had also been in the habit of shipping on consignment. In his opinion a fifty per cent. payment on bill of lading and the remainder on arrival of cargo was more the basis Canadian exporters should arrange.

M. Ramoneda described the regular specification as to size of timber imported by Spain as 3 x 9. That size had become a fixed standard, and though considerable quantities had always been imported from the Baltic countries, there had frequently been found difficulty in getting the stock out to exact measurement. That was a prime requirement in his country, where the trade had grown accustomed to it, and where all construction plans and measurements were based upon the universal 3 x 9 size. From what he had learned of the equipment of British Columbia mills he did not anticipate any trouble in getting timber cut to the correct specification, in case of orders being placed.

A question the visitor asked, and one to which he seemed to give some importance was the possibility of shipping the pulp-wood in the unmanufactured state from British Columbia, provided a full cargo were ttaken. No such shipments have ever been made from this province, though thousands of tons annually have been exported from Eastern Canadian provinces by rail and water to U. S. pulp mills. M. Ramoneda said that at present there were only two pulp mills in Spain and they were of rather small capacity, yet the spread between the price of wood-pulp and the price he presumed it possible to buy pulp-wood in the manufactured state must be very large. Mine and pit props have been exported from British Columbia, it was pointed out to the visitor, so that there would be no very good reason why pulp-wood could not be thus exported, but it would be necessary first to get an organization to produce it for shipment.

Know Your Cost of Doing Business

EVEN in normal times it is quite essential that a merchant in any line should know accurately what his cost of doing business is. He should know not only his total cost of doing business, but also the separate cost of the major items which go to make up his total cost. Also, he should know each month what the separate costs are that make up his total, because this would enable him to keep a safer check on his business from month to month. For instance, if a lumber dealer should observe in any given month that his feed bill, or his cartage bill or his power bill had increased materially over his expenditures for any of these items during the past month, or the past few months, he would be immediately on notice that he should look into these expenditures and find out whether any natural reason existed for the increase. If he found that this sudden increase in expenditure for any given item was the result of some condition which he could cure, he could stop this loss from continuing to the end of the year, or to the time when he would ordinarily make up his cost of doing business.

In times like the present, however, when costs are steadily mounting, there is a special element of safety in a lumberman's knowing his cost of doing business from month to month. It would be exceedingly unwise, and contrary to the dictates of good business, for the lumber merchant to rely on these on the cost basis that covered his operations for even as late a period as the last six months of the past year. Even though his fixed expenses might be very little different from what they were for some past period, the volume of business, for instance, which he might be doing would have such a direct effect upon his costs that they might be materially increased without his knowing it, unless he kept a check on them monthly.

A lumberman who has accurate and up-to-date knowledge of his costs derives a further benefit in that he does not have any misgiving as to what his cost of doing business really is. It is natural for the lumberman who does not know his costs to feel that he is doing business a little cheaper than the other fellow, and for this reason he often lacks the plain business courage to secure his orders at the price he should. If the lumber merchant knew all the time what his costs were, he would also know accurately the margin of profit between that and his selling price, and would thus never work under the delusion that even if he did cut his price because of competition it would all come out in the wash anyway and there would be in some way unknown to him, a fair margin of profit left after all. Uncertainty as to the facts in just this connection has probably been the cause of more failures in the lumber industry than any other one thing. As a simple matter of fortifying himself, therefore, a lumberman should at no time have any doubt as to what his cost of doing business is. He should know what percentage of profit his price is yielding him, and how much his loss of p rofit if he cuts his price. A sound merchant in any line does business on certainty as to costs and not on doubt.

The present critical situation as to prices in the lumber industry, together with the belief generally in the public mind that lumber prices are exorbitant, puts the retail lumberman constantly under the necessity of justifying his price to his trade. In the light of this condition it will readily be seen that the lumberman who has accurate knowledge of his present cost of doing business, as compared with past periods, is in a position to show his customer, if necessary, that the price he is asking in excess of what his lumber costs him is in no case exorbitant. Without this cost information, however, he is not in a position to thoroughly clear himself as to the lumber prices that now obtain.

The fact that lumber prices are high is in itself no evidence that the lumber merchant is making money. Even under the prevailing quotations he might, owing to the lack of volume of business, or other reasons, be actually losing money on his turnover, or at least making far less than he thinks he is, if he is trying to carry his costs in his head, or in his ledger under the single heading of "General Expense." In abnormal times like these, every lumberman, for his own safety, should be more alert than usual as to matters effecting his cost of doing business.

Genoa Bay Mills loaded the American barquentine Alta with 1,600,000 feet of lumber for South Africa early in August.

Who Owns a Business?

Here is a man, for example, who owns and operates a large farm.. He bought it with his own hard-earned money; on it he works ten to fourteen hours a day.

Giving his whole time and strength to the work, he finds it necessary to employ three farm laborers to assist him in getting the maximum production.. He agrees with them for wages and pays what they are willing to work for.

But according to modern thinking, this system is all wrong.

These three men ought to control the farm, decide how much in money and produce should go to the theoretical owner and keep all the rest themselves. These men are giving their lives for the work. "If you deny them control of what they give their lives for, you deny them justice.". The owner is also giving his life for the farm, but of course that is different, he is capitalist, and exploiter of labor.

Does labor in and by itself give the right to control the profits? If men work on a railroad, does the fact of that labor itself give the workers the right to control the profits? Surely not, unless the labor itself furnishes a title to ownership. Is this true?

* * *

If you own a valuable gold watch and take it to a skilled watchmaker to be repaired, whose watch is it after he has repaired it?. Does it still belong to you, or does it now belong to the man who worked on it, by virtue of his labor?

To whom does the control of the watch belong? Does the man who worked upon it, by that labor gain the right to decide whether he will hand it back when you have paid his bill, or sell it and divide the proceeds with you?

* * *

The laborer surely has a right to a fair, even a generous, return for his labor. He has a right to reasonable hours and good working conditions.. But certainly his labor gives him no right to control the industry since it gives him no title to ownershp.

We are losing sight today of elementary economics.

We live under democracy, and it may be possible to nationalize the railroads by legislation.. We might then nationalize the mines and all other industries, finally nationalizing our farms and giving all the profits to the hired farm laborers.

But let us be honest.

Let us not call it "industrial democracy," for "industrial democracy" is concerned with the welfare of all classes.

It is not even true Socialism.. It is really turning over the control and profits of industry to a single class in industry for the sake of that one class alone. We would call it American Bolshevism were it not that those whose doctrine it is have their feelings hurt when called Bolshevists.—Boston Transcript.

Second Hand Machinery & Equipment Wanted & For Sale

Quick Action Section

Special Lots Of Lumber—Positions Wanted & Vacant

Lumber Wanted

LATH

5 million lath wanted. State quantity, grade and lowest price. Box 353, Canada Lumberman. 16-17

Hemlock Bark Wanted in Large Quantities

Quote price and state amount you can supply. Address Box 356, Canada Lumberman, Toronto, Ontario. 17-18

Wanted

We need immense quantity piling, Oak, Tamarack, Fir, Spruce and Long Leaf Yellow Pine, usual quality 12 in. to 14 in. at butt, 6 in. to 10 in. at top; 62 to 70 ft. long, averaging 65. Advise quickly what can furnish, when can ship and price delivered Buffalo, N. Y. All bills discounted. Address Drawer 507, Cumberland, Md. 17-18

PULPWOOD

We are open to purchase peeled Spruce and Balsam Pulpwood in carload lots. Quotations furnished on request. Also Deal ends.

The Jost Company, Limited,
285 Beaver Hall Hill,
1-t.f. Montreal, P.Q.

Wanted

We want to buy 2 x 2 20" Clear Birch squares. If you can cut Maple and Birch furniture dimension stock we should like to communicate with you.

MARK CUMMINGS LUMBER Co.
388 Ellicott Square,
17-18 Buffalo, N. Y.

Birch Wanted

No. 1 Com. and Btr., 4/4" to 16/4". Name us your best prices delivered here for dry stock. Will contract for mill output in Birch, Elm, Basswood and Ash.

WARREN ROSS LUMBER CO.,
10-t.f. Jamestown, N.Y.

WANTED

White Pine Spruce
ALL GRADES.
Also LATH of all grades

JOHN F. BURKE,
2-t.f. Aeolian Bldg., New York City.

White Pine Wanted

One car or more each of:

1 x 10" x 16'
1¼" x 10" x 12 to 16'
2" x 12" x 16'
1¼" x 8" x 12 to 16'
1¼" x 12" x 12 to 16'
1" x 12" x 16'

in best grade you can furnish, which please describe in your offer.

G. ELIAS & BRO. INC.,
15-17 Buffalo, N.Y.

Pulp Wood

We are prepared to buy unlimited quantities of peeled poplar and hemlock and peeled or unpeeled spruce and balsam pulpwood.

ADVANCES MADE

Thompson & Heyland Lumber Company, Limited,
12-t.f. 123 Bay St., Toronto.

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 25 cents per agate line (14 agate lines make one inch). $3.50 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

15-18 Toronto, Ont.

For Sale

Hoop Stave and Lumber Mill as a going concern. For particulars apply to Merritt & Co., Stratford, Ontario. 17-20

For Sale

Fully equipped hardwood operation, now shipping lumber, with cutting rights on 30,000 acres in Nova Scotia; adjacent to railways and waterways. Can be purchased reasonably. Box 263, Springfield, Mass. 17-18

Timber tract approximately 1,000 acres, containing Birch, Maple, Pine, Spruce and Cedar, 2,200,000 feet as per Cruiser's report, located near Sault Ste. Marie, for sale at a bargain. Apply A. Leslie, Post Office Box No. 763, Barrie, Ontario, Canada. 17-20

Complete Mill For Sale

Capacity 25 to 30,000 feet per day. Machinery, shafting and belting, for $6,000. Good condition.

Papineauville Lumber Co. Ltd.,
17-20 Papineauville, Que.

Timber Berth For Sale

For Sale—18 sq. miles country containing a quantity of Jack Pine, Red and White Pine, with sawmill. For particulars, apply Box 1156, North Bay, Ont. 16-17

Sawmill For Sale

Well equipped Circular Mills on Canadian National Railway in Abitibi District, Que., for sale—capacity 25,000 ft. in ten hours. Equipment includes two Lath Machines and Bolters; mill is now running. Will sell entire plant, including Sawmill, Tug, Tracks in Yard and Buildings on property. This is an exceptional opportunity for a practical man commanding moderate capital. Box 352, Canada Lumberman. 16-17

For Sale

$30,000 cash will buy an up-to-date Saw Mill, Planer, Blower, etc., all supplies and lumber on hand at time sale is made, including from 6½ to 7 million feet of finest standing timber in interior of B. C. Can buy 12 to 15,000,000 ft. more adjoining. Capacity of mill 20,000 ft. per day; timber is 85 per cent. Pine, balance Fir. Mill in full operation at present. Must be sold at once to close up partnership. Box 323, Canada Lumberman. 15-17

For Sale

Timber license consisting of approximately two thousand nine hundred and fifty acres. Two hundred miles east of Toronto; limit contains vast quantities of pine, hemlock, spruce, tamarack, whitewood, oak, elm, ash, hard maple, beech, pulp wood, poplar, etc. Limit begins about two miles from a railway and extends back eight or nine miles. Easy haul on winter roads. Great opening for a saw mill of half million feet or more per year. Apply by letter to

D. W. PARK,
17 Perth, Ont.

Standing Timber For Sale

The time is getting short in making arrangements for this year's lumber operations, consequently we have listed with us a number of very desirable large, and moderate sized, limits of Hardwoods and Pulpwood tracts in close proximity to railroads easy of access, and cheaply operated. Immediate possession.

WM. COOKE & SON,
Timber Brokers.
Stair Building,
Bay St., Toronto. 17

Saw Mill Plant For Sale

Practically new and modern Saw Mill Plant, capacity about 30 Million feet per annum, located in the Interior of British Columbia on a beautiful inland lake and on the main line of the Grand Trunk Pacific Railway. About 500 Million feet of timber on and adjacent to Lake (about 90% Spruce) and another Billion feet available at reasonable prices. Natural conditions ideal for economical logging, manufacturing, piling and shipping. An advantage of about $4 per thousand feet in freight rates to the Prairie Provinces over Coast shipments.

This property offers unlimited possibilities as a lumber, pulp and paper property. Would consider selling a half interest. Terms reasonable.

A. C. FROST COMPANY,
165 Broadway
5-t.f. New York City.

For sale, complete shingle mill outfit with 60,000,000 ft. of Cedar, in British Columbia. Price of timber, mill and all, $72,000. Address,

J. D. GE BOTT,
16-19 Big Rapids, Michigan.

Timber Cruising By Air

We can make accurate aerial surveys of the most impassible country at moderate cost. Our large fleet of aeroplanes and flying boats is at your disposal.

BISHOP BARKER AEROPLANES LIMITED
93 Spadina Ave., Toronto.

Miscellaneous

For Sale

25 Lumbermen's Trucks and Wagons, 100 sets Logging Sleighs. All new.

ALEXANDER BARR,
16-19 Pembroke, Ontario.

Sawmill Wanted

A single band and band resaw sawmill complete including gang edger, planer and matcher, single surface planer, lath machine, bed saw, trimmers, adequate power plant and electric light plant. All must be in good condition.

This outfit is for use in Canada therefore preference will be given to offerings from there. A good steam feed rotary and band resaw would be considered.

Address with full particulars, Box 310, Canada Lumberman and Woodworker. 14-17

New Box Making Company Formed.

Westminster Shook Mills, Ltd., is the name under which Messrs. R. L. Cliff and J. H. McDonald will in future operate the plant of the Lumber Products, Ltd., at New Westminster. They have just purchased the plant and mill and are having it put into running shape at once. It is expected to get it in full operation in a short time. Not long ago the boiler house of the plant was partly burned. The insurance company rebuilt it, but the Lumber Products, Ltd., ceased to operate the plant a month ago, a deal finally being made by the mortgages with the Messrs. Cliff and McDonald.

The mill has a capacity of 10,000,000 feet of box shooks per year and it is anticipated that the growing export trade will be catered to. Demand from China, the Straits Settlement and South America has been increasing very materially the past year. The new owners of the plant will put it into a state of efficiency that will ensure its being able to accept and satisfactorily handle large export orders. Mr. R. L. Cliff, who will be president of the new company, is a well known business man of New Westminster. He is president of a number of other manufacturing concerns, among them being the B. C. Manufacturing Co., Ltd., engaged in the box and crate manufacturing industry, Pacific Milk Co., Ltd., and Food Products, Ltd. Mr. J. H. McDonald, who is associated in the new enterprise, is manager of the B. C. Manufacturing Company.

TIMBERLANDS FOR SALE

We have many attractive properties listed with us, for sale, in all parts of Canada and Newfoundland, in both Freehold and Crown lands.

BRITISH COLUMBIA
Large tracts of Cedar and Spruce situated on tide waters and the larger rivers, with or without saw mills.

NEW BRUNSWICK
Some very fine Freehold hardwood properties.

NEWFOUNDLAND
More than 3,000 square miles of the best timbered pulpwood land in the Colony.

ONTARIO
Many pulpwood and hardwood tracts, both Freehold and Crown land.

QUEBEC
Some excellent Freehold properties running heavily to pulpwood. Large pulpwood limits on the Upper Ottawa and on the North and South Shores of the St. Lawrence.

Cruiser's reports and blue prints, where available, will be sent to Principals or their accredited agents.

R. R. BRADLEY
4 Hospital Street,
MONTREAL, P.Q.

Eight Hour Day Was Impossible

What the existence of a closed shop and an eight hour working day mean to many important lines of industry was strikingly illustrated in connection with the recent strike of the workers at the Chippewa Canal construction job.

Mr. H. G. Acres, the Hydro hydraulic engineer, in his evidence before the Government Commission, stated that he had made an exhaustive study of the situation. He said that on this job the eight hour day would be impossible. He gave some startling figures. On the cable ways, production had fallen off 30 per cent. under the eight hour day schedule which had been introduced in an honest effort to find what could be done. Under the ten-hour day scheme of last year 20,000 cubic yards a day had been taken up. Since the eight-hour day had been put into force only 6,700 yards a day had been excavated.. "This is not a direct result of the change from the ten-hour day to the eight-hour day," he said, "but an indirect result, in that we would not get laborers to stay on the job and get production."

Last year it had cost 67 cents a yard to excavate earth. Today it cost $1.38.

Review of Current Trade Conditions

Ontario and the East

Conditions in the lumber line are always quiet during the month of August when many wholesalers are holidaying and retail lumbermen are observing a mark-time period. Widely different reports are presented by representatives who are calling upon the trade. Some declare that practically no orders are being placed at all for stock, while others say the impending increase in freight rates has revived trade to a considerable extent and resulted in a number of cars being placed that would otherwise not have been sold.

The retail dealers are looking forward to an active turnover this fall as the farmers all have good crops and will be doing considerable in the way of repairs and extensions. It is also expected that some fall construction will be done in various smaller centres as the housing situation is becoming more acute all the while.

There is a fair movement in western stock and Coast representatives are well satisfied with what they have been able to place considering the season of the year. Shingles are holding their own and so is the lath market.

There is a tendency on the part of many businesses in other lines to curtail production and unload supplies. This is in accordance with the policy of looking to the future as no one knows exactly how matters are going to shape up during the coming few months in the industrial and commercial arena. There are, however, practically no pessimists in the lumber ranks. They believe that business will be steady and firm this fall and that during the winter it will attain unusual proportions. Prices on the whole have been holding firm and, while there have been a few cuts in certain lines, the general schedule of quotations has been remarkably well preserved.

Many companies already have gangs in the bush cutting for next season. It is not likely that the cut will be quite as large during the coming winter as it was last, although some firms declare they will take out a larger amount of timber than usual. The exodus of workers to the West to help farmers garner the bountiful harvest of the prairies has robbed the mills at some points of a number of helpers and it has been found difficult to procure labor in sufficient quantities in certain sections. It is expected, however, that some of these men will return in time to work in the bush.

The outlook for next year is on the whole good, everything pointing to a sustained demand for lumber and the maintenance of present values. Transportation shows an improvement at several points, but how long this will continue after the western crop begins to move is problematic.

The demand from the United States has fallen off decisively and only shipments in fulfillment of contracts made months ago are going forward.

The market for hardwood is somewhat spotty. The planing mill men and trim manufacturers are buying freely. Very little is going to the American market. Brown ash is probably the strongest hardwood item. Birch is a trifle weaker but is not showing any sign of a big drop. Maple is plentiful but is not selling and is about the weakest item in the hardwood lists. Stocks of all woods are fairly plentiful and are in prime shipping condition. The demand during the next month or six weeks should be the biggest factor in determining the trend of prices.

In the softwood line the strongest feature is white pine, which is holding firm. Spruce and hemlock have dropped slightly, largely due to weak call. American yellow pine is being offered at reduced prices and has something to do with the drop in hemlock and spruce. The cut in the Ottawa Valley will likely be below normal and several mills have been forced to close earlier than usual, through a shortage of logs.

United States

The lumber market has not changed materially during the past two weeks and at some points trade is much quieter than it has been during the last year. Reports from different centres show that business has been dragging in many sections of the trade. Lumbermen generally have been making a special effort to ship as much stock as possible before the increased freight rates went into effect, especially where customers were willing to accept the lumber. Many buyers have also exhibited a desire to take all the stock they could conveniently handle in order to avoid payment of the increase.

A cry has gone up throughout the whole business ranks of the country and that is to economize. The era of extravagance seems to be rapidly coming to an end. For a long period there have been high wages, abundance of work, splendid returns on investment, and no one paid much attention to costs. All must have the best at any price no matter in what line. Now an agitation has set in for lower prices, which does not necessarily mean a return to pre-war conditions but a substantial reduction in the values that have been prevailing in certain commodities for the past year and a half.

The business of producing and selling lumber is so dependent upon general business conditions that whatever affects industry in a general way is reflected in the lumber market. Yet, in another sense, the lumber business stands alone. Just now, when housing facilities are far below requirements, building material takes its place among the real necessities, but ordinarily people are not obliged to build unless the spirit moves. In addition to this, wood enters into the construction of so many luxuries—automobiles, for instance—that a decrease in the demand causes slow trade in the lumber which enters into these things.

But the lumber industry is not dependent entirely, nor chiefly, on the demand for the luxuries made of wood. There is a prospective demand for building materials which has been absent from all calculations during the past few years. The increased revenue assured the railroads of the country, means that they will soon be in position to rehabilitate their properties. New cars, new motive power, new trackage, new terminal facilities, new buildings, all will require large amounts of lumber. In past years, the ordinary requirements of the railways have constituted a very considerable percentage of the demand on the lumber producers. At present the needs are extraordinary, and will require an extraordinary amount of lumber.

One stipulation that was put in all sales in the east during the past few weeks was that if lumber was not shipped on or before August 26th, the buyer would pay the increased freight rate. Some customers were disposed to object to this arrangement.

In regard to the hardwood situation, conditions were rather weak while prices showed a wide range. Some stock was being pushed on a rather listless market and further declines in the price level are noted, in consequence, at some centres of the trade. One important distributing point, Cincinnati, reports some greater activity and a larger volume of business than in previous weeks, with prices about stationary. As a whole, though, the industries that are principal users of hardwoods are operating on reduced schedules, their needs are less and their inclination is to buy only for urgent requirements, regardless of price.

Birch is now moving very freely, and is bringing good prices, after the recent stagnation in that wood. Manufacturers report that the outlook as regards birch is very favorable, and attribute the change for the better to the buyers having held off just as long as they could and having now reached a point where they simply have to have the stuff to fill their orders. That this will shortly be true of various other hardwoods is confidently predicted.

There has been a distinct falling off in the volume of business in yellow pine this week and though values have been fairly well maintained in shed stocks, with even a few advances noted, there is a lack of strength in common stocks more noticeable than in several previous weeks. Demand is slack throughout the list and such strength as is seen in uppers is due principally to a disinclination on the part of the large mills to accept business freely. It is true, too, that stock lists do not show large accumulations of the upper grades.

Transit cars have been in a little better demand than mill shipments, as there is little disposition on the part of the mills to undertake shipment of new business prior to the advance in freights. But buyers are rarely keen for any offenders, unless they happen to fit immediate needs, and salesmen are reporting limited results in proportion to effort they are making to secure business.

There is little change in the car situation in the South.

Great Britain

There is not a great deal of change in the general situation so far as the lumber trade is concerned. Reports from the various sections differ materially and in some districts business has been very slow through the paucity of buyers as well as the combined effect of high prices and shortage of supplies. Lumber is now coming forward at various seaport centres more freely than has been the case for some time. The month of August is generally a very quiet one,

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. Bole, Pres. F. H. Goff, Vice-Pres. E. C. Barre, Gen. Mgr. W. A. Saurwein, Ass't. Mgr.

being a holiday period, and, as one authority recently remarked, it would be futile to expect orders coming in on an extensive scale. More attention is being directed to business for the coming fall and winter, and plans are being prepared accordingly. There is so much turmoil in the political arena, the European situation, the Irish question, etc., that the future is not viewed with the greatest amount of confidence. There are no pessimists but the general feeling is to adopt a middle course or conservative policy. There have been years when the timber trade has been lively in the month of August, but they have been few and far between, and as a general rule the number of fresh contracts has been very small. For about this time the arrivals of wood from abroad are at their height; stocks have become fairly plentiful, and selling is, for importers, the more urgent matter. Consequently, if there is any sign of a weakening market, it generally shows itself about this time. The middle of the summer has frequently been a critical time for prices, and a drop in timber values during July and August has been by no means unusual. But even had it not been the first week in August, little would have been done, as there is no inducement to negotiate; shippers have not weakened in their prices, and the quantities already purchased are ample for the time being. The main point is to get forward the fairly large quantities already purchased, and there will be plenty of time to buy, during the autumn months, whatever more is necessary for the coming winter.

The increasing advantage of cash payments nowadays when the discounting of bills is so difficult has upset many of the regulations about net terms or cash less 2½ per cent., says an exchange. As our readers know, 3¾ per cent. is offered for cash by some importers, and we believe most would be willing to give a heavier discount than usual rather than take acceptances. It is not that there is any fear about the solidity of customers as a general rule, but simply because the action of the banks makes a cash trade to a larger extent than usual, almost essential. In all directions the same conditions are to be noticed. Several Finish shippers will offer goods at pounds per standard reduction for cash down, and although the Swedish sellers have not apparently been so eager in this matter, we should not be surprised if substantial concessions were to be obtained by the offer of cash payment at the time of closing the contract. The financial position does not become easier, and the volume of trade must inevitably be cut down in consequence. Nearly all importers are compelled to keep smaller stocks than usual, and some are adopting the policy of restriction, not entirely because of necessity, but because they realize the growing advantage of having their assets as liquid as possible. This does not so much matter in the shipping season; but supplies must in some way be accumulated for the period during which the Baltic ports are closed, otherwise there will be a danger of a shortage before the spring.

In a report on the timber market for the past month, Alfred Dobell & Co., of Liverpool, Eng., say: The very considerable import of New Brunswick and Nova Scotia spruce deals again met a poor demand, and stocks are heavy. The moderate import of Douglas fir met with a fair demand at firm values, and stocks were slightly reduced. In Scandinavian deals and boards, the call was only moderate, and stocks were increased, while values were easier. There was a moderate import of pitch pine, an dstocks were slightly reduced, but remain ample for present requirements. There was very little enquiry, and forward business was practically at a standstill. During the past month there has been no change in the position of the hardwood market, and the general demand still remains very quiet. Sellers have experienced difficulty in disposing of the moderate arrivals of consignment parcels—the bulk of which have been stored.

In East India teak, the stocks are heavy, and the market is generally inactive. New business is difficult to arrange.

The auction sales of mahogany held during July were fairly well attended, and the results show that large-sized sound logs continue to be in strong demand at high prices. Medium-sized wood of good quality also realized satisfactory values, but inferior wood was not in demand, and large quantities of this grade failed to find buyers.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

St. John Reports Logging Costs Will be Higher

Rather a stagnant spirit pervades the lumber business in the vicinity of St. John at the present movement. Very little, if any, change has taken place during the last two months. No prices, which are profitable, are being offered, buyers saying that conditions do not warrant purchasing any stocks ahead or speculating to any extent whatever. The building trade in United States shows no improvement, cement and nails being extremely scarce, transportation being, to a large extent, the cause of this shortage. Cars, even for general movement of materials within each country, are very scarce, and where there are no stocks of these materials, it is impossible to build. Added to this trouble, the banks are refusing to advance money for expansion of any kind and building is doubly hit until these troubles right themselves, no doubt very many works of expansion and ordinary house-building will remain at a standstill.

Rents are impossible to find in all cities, and it certainly looks that in the near future a start must be made in house-building. Lumber cannot be reduced in price and will not, as very little raw material of logs will be cut during the coming winter unless a change for the better takes place. Logs certainly will cost more to cut in the woods during the coming winter than during the past winter. Prices of sawn stocks do not at the present warrant going into the woods, and operators are now planning to do nothing this winter until conditions right themselves.

The pulp operators are buying all the timber possible and holding it for the supply for future use. They are also paying unheard of prices for wood and practically every contractor, who went into peeling wood this season, is coming out with only half his contract filled. Under these conditions, certainly, saw materials of logs will be higher than ever. Stock of deals at St. John are not excessive and the stock sawn and to be sawn are brought up and in the hands of strong brokers well able to hold for the prices paid, plus a profit.

The English market shows no change as stocks are plenty for immediate needs, but no great surplus is on hand. If the car trade keeps improving in England, considerable stocks of lumber will be used and an old revenue will be opened up which for some time has been closed. Wide stocks of deals are scarce and will demand a fair price when needed for use in construction work, which is under serious consideration as houses are much needed.

Local conditions at St. John are good, the factories being overflooded with orders for a long time to come. The mills are still sawing excepting J. Emory's mill at Pleasant Point, which has just finished the season's cut. Shingles are moving quite freely at St. John for local and interior consumption. Lath stocks are not heavy here and the price remains at about $8.50 to $9.00 per M, delivered Boston, which will net with exchange $7.50 per M at St. John. The box trade is also good and shows no signs of letting up.

The operators, who manufacture at St. John, have made no plans as yet to go into the woods for any logs during the coming winter, preferring to wait until later to see just how prices for sawn stocks will turn out.

Stumpage has increased about $2.00 per M over last year, and is firmly held by wealthy land owners, who refuse to reduce the advance, preferring to let stocks grow rather than sacrifice them, as they believe the future looks bright from the land-owners' standpoint. Financial conditions show no change here, money gradually getting scarcer and banks refusing loans or extensions.

Business Slackens Up Somewhat in Ottawa

Conditions in the Ottawa lumber market for the closing period of August, showed little if any change for betterment as compared with the first part of the month. If anything business slackened up and the demand both domestic and foreign hardly kept pace in volume with the closing period of July. Though trade in general slowed up somewhat, prices remained firm, and it was prophesied in some circles of the trade that brisk fall business might be looked for.

Business all around, outside of European export, was better than a year ago, and prospects were brighter. The Polish-Russian situation commanded some attention, there being some speculation as to whether or not England was to engage in another war? The disturbed European conditions had its effect on the market, for as one lumberman put it, "buyers are not going to purchase this year's cut or stocks at high prices, unless they have a pretty good idea of getting them and turning them over quickly." The dock workers' strike in England and the uncertainty as to the outcome of the Irish question also tended to further disturb normal conditions. To offset this.

in a measure, came the welcome news that the ocean freight rate on lumber had come down from 250 to 210 shillings per standard. In the opinion of exporters it was about time that it did.

White pine lath was in good demand, but was not overly plentiful. Rumors were heard that shingle prices were due to weaken, with the arrival of shipments from the western shingle mills on the eastern market.

Outside of orders, inquiries and prices, the general labor situation was perhaps of as much if not more importance to the trade in general than anything else during the last two weeks. This was largely brought into prominence by the Board of Conciliation investigating the conditions surrounding the dispute of the members of the Inside Woodworkers and Factory Workers' Union, and the employers, making its award. The award, while it makes recommendations for a forty-four hour week in the woodworking plants, does not specify or grant any particular wage increases, though it recommends the establishment of a minimum wage scale.

While four or five hundred workmen were effected at Ottawa and fourteen factories, the importance of the award to the general lumbering trade generally does not lie in either of them. The point that stands out clearly in the dispute which has run since last February, and which sent the union workers out on strike on June 12th, is that the Department of Labor has no power, under the Industrial Disputes Act, by which, authority for the creation of the board is granted, to enforce the award. It is a weakness, some say in the Act, but as the legislation now stands, the heads of the woodworking factories at Ottawa do not need to care a tinker's damn about the award, unless they want to of their own free will and accord. The manufacturers, while they have received copies of the award, continued up to August 24th to stand "pat" and "say nothing" about whether they were agreeable to accept it or not? After waiting a full week a mass meeting of the workers accepted it and appointed committees to try and get recognition of the union from the mills. The mills didn't say or do anything, as they adopted the right attitude and stood "pat," under the circumstances. In the first place the employers never agreed to the board, and while the Department of Labor appointed a representative to it for them, they were not legally, of their own choice, represented upon it, nor have they to take any cognizance of the board's finding. Without attempting to prophesy what may happen, it looked up to Aug. 24th that the principle of individual bargaining instead of collective bargaining would be adopted. If it finally is, it's a win for the mill owners, as one of the biggest points in dispute between the workers and the employers was not so much as to wages, as of recognition of the union and the establishment of a standardized wage scale.

Woods' labor was reported scarce, though good hopes were held out that the camps would be filled when the season's cutting operations commenced.

The car situation during the last two weeks, if anything grew worse, both as to domestic and foreign rolling stock. The general belief was that the railway companies were utilizing their cars for the movement of the grain and other western crops on both sides of the border.

Conditions Quiet in Montreal—Prices Generally Firm

There is little business passing in Montreal. Here and there wholesalers report a fair trade, but speaking generally, dull conditions prevail. At the same time there is a belief that there will be a revival in the fall.

The outlook is for a maintenance of prices. There are reports that some of the smaller mills are offering concessions, but that the larger manufacturers are holding firm and even advancing quotations. Manufacturers who have camps declare that there is likely to be a still further advance for the 1920-21 cut, basing their opinion on the cost of labor and camp supplies. In their view, there is no chance of prices dropping; there may be a slight recession for special reasons, but the operating expenses will not allow of any permanent backward movement.

The American market is slow, while B. C. products are quiet. Lath has picked up a little.

The workmen's housing scheme, so far as Montreal is concerned, is a great disappointment. The second year has passed without any definite action, and it is practically certain that nothing will be done this season. Some provincial towns are going ahead.

Only a small quantity of lumber is going to the U. K. The fall in freights has had a deterrent effect, exporters holding their hands for fear that there will be a further reduction. The British market, too, is not encouraging.

Mechanical wood pulp is a very strong market, while sulphite is very firm. The high prices are likely to continue for a long period, due to the abnormal demand for paper, and also the high figure for pulpwood.

English Capital for Quebec Trade

The lumber resources of the Province of Quebec are proving of immense value in developing her general trade. We need not refer in detail to the pulp and paper plants and the great importance to the province of these comparatively new industries. It is now announced that four of the largest match manufacturing firms in Great Britain, recently amalgamated under the name of Maguire, Paterson and Palmer, Limited. The industry, or at least a section of it, is not new to the province. The Log Supply Co., Limited, in which American capital is interested, has just completed an extensive splint afctory at Berthierville, and also exports lumber to England for matches.

One motive which actuated the British company in coming to Canada, according to Sir A. H. Maguire, the chairman of the company, is the certainty of getting raw materials. Up to now the lumber required for the British company has come from Europe and Japan.

Maguire, Paterson & Palmer, Limited, have secured a factory site and building operations will be commenced almost at once. The factory will be a duplicate of a new plant just completed at Garston, Liverpool. It will be built in sections, nainely, a saw mill, a packing case factory, a match splint factory, and the match factory proper.

The management of the Dominion branch of the industry is to be in the hands of a directorate of twelve, six Canadian and six British, Sir Lomer Gouin and Mr. George Chahoon, the president of the Leurentide Company, being the first two to be named from this side; and the president of the company will be Sir Alexander Maguire. The British directors are Col. Bouverie, D.S.O., representing Vickers, Ltd.; Mr. J. Lever Tollotson, head of the leading cardboard box manufacturers in England; Mr. J. C. M. Jacobs, late manager of the Bank of Liverpool; Mr. Charles Gane, one of the leading timber men of London, and D. P. Maguire. Mr. M. C. Small, of the Laurentide Company, has been appointed to take charge of all timber operations for the new company.

Retail Lumber Stocks Low in West

The hundreds of members of the Western Retail Lumbermen's Association on the prairies, report stocks in yards lower than at any period since the war, says a recent despatch from Winnipeg. They report business exceptionally good, but their accounts are mostly with farmers and they can't make collections until after the harvest. Meantime, they are not ordering stock from coast mill men, as banks on the prairies are restricting loans until the crop has been moved. The lumber trade will remain dull, as far as original mills shipments are concerned, until Oct. 15.

Meantime, J. E. Pool, secretary of the Mountain Mill Men's Association, was in Ottawa recently attending the freight rate discussion before the Railway Commission. He went there not to oppose increase, but to see that B. C. mills stock rates to Ontario and other points east, are properly equalized with the lumber rates from the Southern States to eastern points.

During the war the Southern pine trade which went into Eastern Canada lost out, and that valuable market was secured for B. C. lumber. It is claimed any advance in lumber rates must be on a basis that will permit this big domestic market and that of Buffalo, Detroit, New York to remain in control of B. C. mill products. Unofficial reports from Ottawa to western dealers are that the commission will favorably consider this point.

Lumber Production in Calgary District

Reports received from various parts of the country by lumbermen in Calgary indicate that lumber manufacturing conditions are progressing favorably and labor and other contributing agencies are better than they have been for a number of years. There is still considerable complaint about the car service and the inability to make shipments across the border. Local yards are stocking up with lumber of all kinds, looking for a busy season in the fall, and in many directions there is already a movement in the way of bigger business, owing to the large crop yield on the prairies.

Timber Lands Sold at Auction

Several lots of timber lands in the parishes of St. Martins and Simonds, St. John county, comprising between 1,100 and 1,200 acres, were sold at auction recently at St. John, N. B. The property was put up en bloc, and was bid in for $15,000 by Horace H. Tufts, for the Pejepscot Lumber Company. Competition during the sale was confined to three or four bidders.

The new machine the Howard Smith Paper Mills of Montreal are installing at their Crabtree Mills Division, in the province of Quebec, will trim 82 in. This will increase the production of that division by 15 tons per day of sulphite bond papers, most of which will be for the export market. In regard to the sulphite department of the Cornwall Division, the capacity is being increased to 60 tons per day, but it is not expected that it will be in operation until October.

Practising Golden Rule in Lumber Business

Some of the Relationships Which Should Exist Between Lumberman and his Employees, his Competitors, the Wholesalers, Customers and Salesmen

By W. C. Massey

I REALLY don't know just what phase of this subject I am expected to handle, but I presume a few shots on the ethical side of business in general and in the lumber business in particular is what is required.

David Harum said the "Golden Rule" was to do unto the other fellow as he would do unto you, only to do it first. I must confess that there are times when a fellow is sorely tempted to follow David's way when horse trading, but there are few lumbermen who are not too big and too broad to do business on that principle. In fact, there is no line of business in which all the men engaged will measure up to a higher average standard of citizenship than the lumbermen. In nearly every town you will find the lumbermen on the school boards, city council and at some time mayor, on the bank directorates, on the Y. M. C. A. boards of directors, at the head of the building and loan associations, leaders in church and civic affairs and to the front in everything that stands for the uplift and betterment of the community.

Getting down to my subject I shall discuss briefly some of the relationships tthat should exist between the lumbermen and his employees, the wholesalers and manufacturers, his competitors, the travelling salesman, the contractors and his customers.

Find Right Man For Place

Don't employ a man because you can hire him cheap, but look the field over until you find the right man for tthe place and then pay the price to obtain him if he can be obtained at all. Cheap help rarely brings the best percentage of profit on the amount invested. If you have to employ an assistant it is well to obtain a man, who, after being with you a reasonable length of time, can run the business so you can feel easy if you have to be away from your business a few days at a time. By following this principle, as your business grows, you have your organization which is competent and able to carry the business on and continue its growth even though something happens that you want to devote a great deal of time to other things. Then, too, you have an organization that is of itself making your business grow. The article you have for sale or the price you place upon the article will not make a business a success. After all the one big element in the success or failure in a big business is the organization and the only way to build up an efficient organization is by using good judgment in the selection of your assistants and employees and then by treating them right and keeping them with you. The greatest successes in the business world have not been the men who have tried to know it all or do it all, but have been the men with the foresight and ability to surround themselves with the right men for their respective positions. Andrew Carnegie, Chas. Schwab, Geo Little, Henry Ford, Judge Gary, and Jackson Johnson are eminent examples of this type of man.

Encourage Your Employees

Treat your employees as working with and not for you. Let them know that you are interested in their welfare Take them into your confidence and give them a chance to learn the business and advance. When they have done a piece of work well or in a shorter time than expected or made a good sale, compliment them for it. And at the end of the year if your profits have been good acknowledge to them that you have had a good year and that they have helped to make it so and give them a little bonus. I have tried it and feel that it pays threefold—not only in my employees having a higher respect for me, but also in their increased efforts to do their best and make the following year profitable.

Criticise when necessary but never when your or your employee are angry or in the presence of a third party. Wait for a more opportune time and then talk it over in a kindly manner. The result will be much better. Be quick to compliment and show your appreciation, but not too quick to criticise is a good rule with employees.

Dealing With Wholesalers

In dealing with wholesalers and manufacturers do unto them as you would always have them to do unto you. If you have had a car of lumber ordered since last March and the price has advanced $15.00 per M you have a right to expect the mill to ship the car as ordered both as to amount and grades and at the price at which you purchased the material. On the other hand had the market declined $15.00 per M you should not cancel the order for no other reason than because the market has dropped. I have never cancelled an order for the reason of a decline in the market.

In my opinion the wholesaler or manufacturer should protect the dealer upon whom he is depending to handle his products and carry them in stock. The condition in this respect is growing better from year to year. The wholesalers and manufacturers of lumber and shingles, sash, doors, and millwork, hardware, nails, lead, oils and paints and wall plaster, as a rule adhere strictly to this policy. Only a few years ago the plaster manufacturers would sell to any contractor or consumer in car lots and were hard to convert into the other method of doing business, but having once changed their policy they would not consider going back to the old way. They find that they sell just as much plaster and have a lot less worry with bad and slow accounts by marketing their product only through the dealer. They will not even quote contractors or consumers without first consulting a dealer in the territory from which they received the enquiry.

Cement People Getting Nearer

The cement people are getting nearer to this policy than a year or so ago. They will not quote other than dealers except at a price 10 cents per barrel above the price quoted to dealers. This helps some and especially when they will first consult you and on your advise quote through you and at a higher price if you suggest. I am of the opinion that a differential of 25 cents per barrel would be more nearly right. This would be a fair profit to the dealer and would be enough to make it interesting for him to go after the business. Then, too, if you handle cement and carry it in stock and take care of all the little and non-profitable jobs the manufacturer of the cement certainly ought to be willing for you to handle the large jobs and get a living profit out of it. I want to say that the cement manufacturers have co-operated with me excellently in my territory and the only suggestion I would offer would be that they make the differential 25 instead of 10 cents per barrel. I understand that they are now making the differential of 25 cents per barrel in some territories and it might be that if every retail lumber dealer would take the matter up with the cement manufacturers they would establish a differential of 25 instead of 10 cents per barrel.

Trouble with Glass Manufacturers

The only real grievance that I have had during the last year with the manufacturers or wholesalers has been with the plate glass people. I do think thaat they should protect us on plate glass when we are stocking their window glass, paint brushes, paint specialties, etc., but they stubbornly refuse to do so. Worse than that, they sometimes quote your customer at a lower price than they quote you. For example, I will refer to a specific experience I had recently with a glass manufactring concern. We wrote for quotations on a bill of plate and prism glass and corner bars and were quoted a price of $514.00 on this bill. We also had exactly the same quotation from another concern. Although we sold all of the other material on the job the contractor wrote direct or prices on this bill of glass and the first glass company quoted and sold the contractor the identical same list of plate and prism glass and corner bars on which they quoted us $514.00 for the sum of $320.00. I am not taking the contractor's word for this, but actually saw the invoice and took it and compared it with the list I had them quote us on and found it to be the same. The contractor also advised that the other concern had quoted him a price only a few dollars above that price. These quotations were in June and I wrote the concern a long letter with reference to the matter and asked for some explanation. but they apparently ignored my letter as to this date I have had no reply from them. I also put the matter up to their representative the next time he called upon us and he simply denied that his firm had sold a bill of glass to anybody at a cheaper price than quoted to us. After convincing him that I knew whereof I spoke he said that he would take the matter up with his house but I have heard nothing further.

The Policy Adopted

Now, we have adopted this policy in the matter: We have five pretty good sized lumber yards and a hardware and furniture store, all of which handle window glass, brushes, paints, etc., and we shall

"Grub!"

WHEN the grub call sounds, and your gang troops in, hungry as wolves from woods or river—you face a big question. Will you have a well-fed, contented crew of workers, or a bunch of grouchers, kicking about their grub?

Upon the food you give them depends very largely the harmony of your camp, and the season's showing of work.

Sudbury Ottawa Montreal Quebec Halifax Sydney St. John

not place any further orders with that house. Shall adhere to that policy until it convinces us that it is willing to do the right thing by us. Our window glass business alone would amount to much more than all the plate glass that comes into our territory. We shall make no effort to obtain the plate glass business inasmuch as we do not care to handle it and take the risk of breakage without charging a reasonable profit. It certainly would make a bad impression upon our customers to quote even a reasonable profit when they had as good and perhaps better price than we on the same article. I believe that this policy on the part of a majority of lumber dealers would soon cause the glass people to tote more nearly square with the dealer on plate glass, and at least not quote the customer a better price than the dealer. I don't believe that there would be any less plate glass sold by handling same through the dealer, neither do I beieve that the glass people woud have as much trouble with bad accounts and slow collections. The manufacturers of plaster and other articles have found this to be the case, why not the manufacturers of plate glass?

The Travelling Salesman

Treat the travelling salesman nicely. Even though you are busy take time to give him a few minutes and treat him courteously. He has a living to make for himself and family the same as you have and selling goods is his way of making a living. And if he holds his job he must produce the results. Always give him the order rather than send it direct to the house. Even hold the order for him whenever possible. He will appreciate it. If you send the order direct to the house maybe the travelling salesman will get credit for it and maybe not; anyway, it is an added prestige for him if he sends in the order himself. Then the travelling salesmen cover a large territory and mingle with many retail lumbermen and are always picking up new ideas and if you give them a chance they will pass some of them on to you. There is no better way to gain their goodwill and friendship than to give them your business and to hold an order for them occasionally. I have saved many a dollar in buying on the strength of information given me by the travelling men that the price of certain items would advance so and so on or about such and such a date I do not always advise buying something not needed just to patronize the travelling men, but certainly you can do no harm by buying your wants through them.

Treatment of Competitors

Treat your competitors on the square. They will usually reciprocate by treating you nearly as well—not always, but usually. Don't forget the old saying, that every knock is a boost. Don't knock your competitor. Leave that for the other fellow to do. Knocking won't get you anywhere, besides it only tends to cause hard feeling on the part of your competitor when he hears about it—and nine times out of twelve he will hear about it and you are lucky if it has not grown larger by the time it reaches his ears.

It is bad policy for competitors to borrow from each other. One or the other will do the more borrowing and sometimes the item returned is not of as good grade as the one borrowed and both tend toward ill feeling. Then, too, the man with the stock is entitled to a part of the profit and the larger part of that. The better policy is for competitors to buy from each other and do it freely when they need material which they have not in stock in order to fill their orders, but divide the profits—the dealer with the stock taking about 60 or 70 per cent. of the profit.

Get the Market Prices

Always put a fair profit on the market price of your goods—the market and not the cost price. If a farmer stores $1.50 wheat he threshes and wheat advances to $2.00, the next winter, most certainly he will not sell it to you then for $1.50 per bushel, but he will ask you the market price. Lumber and building material are just as staple as wheat. You have the same right to advance your stock with the market as has the farmer his wheat. In fact, the principle is correct. If the market declines and you have a large stock on hand, most certainly you will have to decline with the market or the other fellow will get the business.

It has kept me busy this last four months marking price lists upward every ten or fifteen days, but I try to keep up with the market—although this has been impossible of late. Some of our yard managers have complained that the new prices were so high they could not sell the goods and that their competitors were not keeping up with the advances. I simply took the stand that we had better hold onto our lumber and shingles, etc., and let the other fellow clean up. I have known of some of our competitors selling B and Better flooring at $15 per thousand less than they could replace it. Now that was mighty poor business. For my part I preferred to let them sell all they had and then get a profit on the market price for mine later. I find that we have made and are making money by following that policy.

One of the problems of the retail lumbermen is the handling of contractors. In as far as possible the lumbermen should eliminate contracting and throw as much work as possible to the contractors. There was a time when our company did a great deal of contracting. This was on account of handling so much time payment business which the contractors were not in a position to handle. However, after taking the management of the company I had a little conference with each of the contractors and I advised what I believed that we should do to eliminate the contracting end of our business as far as possible, in as much as they were entitled to this business and that they were entitled to all the profit figured on the work, and on the other hand, we did not expect them to figure a profit on our material. I assured them that we would allow them every cent figured for the work in case we were obliged to handle a contract. To a man they agreed with me and thought the plan a good one. It has worked elegantly and without a single bit of friction with the contractors, and there is not a contractor in our territory who would figure out of town on a bill of building material. I never miss an opportunity to throw a job to some contractor. I also avoid getting two contractors to figuring on the same job, but as far as possible get one contractor after one job and another after the other job. The contractor is entitled to a fair profit and good wages, and I always avoid getting them to cutting prices and knocking each other—consequently the feeling is good between the different contractors in our territory.

Make the same price to the contractor and to the consumer. If you don't the public will soon find out and you are the loser in more ways than one.

Avoid signing bonds for contractors. If you make a custom of signing contractors' bonds you might as well not have a mechanics' lien law, and if you make this a rule you will not have to irritate some contractor that you are afraid of by refusing to sign his bond when he knows that you sign bonds for the other contractors. Besides, in most towns there are local insurance agencies whose business is the writing of surety bonds along with their fire and life insurance business, and they are entitled to the business. They are probably your customers also and will appreciate your throwing this business their way.

Creed for Dealers

I will not now take up a lot more of your time by trying to tell you how to handle the trade in general, but offer the following creed as covering a lot of ground.

Believe in the goods you are selling and in your ability to get results.

Believe that honest goods can be sold to honest men by honest methods.

Believe in working, not waiting; in laughing, not crying; in boosting, not knocking; and in the pleasure of doing business.

Believe that a man gets what he goes after; that one order today is worth two tomorrow; and that no man is down and out until he has lost faith in himself.

Believe in courtesy; in kindness; in generosity; in friendship and honest competition.

Believing in increasing your trade and that the way to accomplish that is to reach for it. Are you reaching for yours?

A Wholesale Dealer's Creed

Here is the way one wholesale lumber dealer puts the view he holds, in a circular issued to the trade—you can gather that he is located in the mid-west states:

"We believe that the old method of doing business with the mills is passing away. The idea that the manufacturer must be kept in the dark as to conditions and that he must be discouraged into cutting his price to allow the wholesaler a profit, has gone into the discard along with the two-passenger buggy horse and fifty-cent cotton hose. We believe that if the wholesaler renders the service which justifies his existence, that the mill man will not begrudge him a living profit. We have found that when the mills are making money, we can make money. Naturally then we are boosters when conditions justify; and yet we shall not hesitate to tell you unpleasant truths when they are necessary. We are trying to spread the gospel of west coast lumber throughout the middle west. We believe that it is the future wood for this territory and we are trying to make it the present wood. Every good car of west coast lumber which is shipped into our territory is a boost for us no matter who ships it. But we surely have the axe out for the man who ships a bad one. Every mill man should realize that every car which goes out from his plant carries as a part of its cargo a portion of the future of the fir market. A good car may make a man a good fir customer for life and a poor one can more easily turn him away."

EDGINGS

Ontario

Several forest fires have been raging in the North owing to the recent dry weather and the flames recently threatened Porcupine but a change in wind and rain saved the town.

Four hundred men are engaged in construction work on the new pulp plant of the Fort William Pulp and Paper Co at the Mission site, Fort William. The mill will be in operation in February next.

One hundred and twenty-six cords of pulpwood are cut and loaded in the course of every twenty-four hours at the Hydro plant on the old Rathbun property in North Hastings, it is stated. Night and day shifts are employed.

An order from the Minister of Mines was lately received by Mr N. J. MacAulay, Mining Recorder, Haileybury, that permission is now granted to perform assessment work on these claims in the Gillies' timber limit recently opened for staking.

Fire, which started shortly before midnight recently, destroyed the office, sheds, planing mill and kiln owned and operated by the Pearce Company Ltd., Marmora. Dwellings near by were damaged. The Pearce Company's loss is roughly estimated at $25,000, partly covered by insurance.

Kaministiquia Lumber Company, Limited, Fort William, Ont., was recently granted a provincial charter to conduct a general lumber business in the manufacture of all kinds of wood products. Capital $200,000. Among the incorporators are D. E. McKay and N. M. Paterson, both of Fort William, Ont.

As a result of the erection of a thousand homes throughout Ontario this year, involving the expenditure of not less than $4,000,000, the money which has been placed at the disposal of the Provincial Commission has been exhausted. The places where the principal activity has been shown are Windsor, Ford City, London, Niagara Falls, Guelph and Ottawa.

Wm. H. Bromley, of Pembroke, who is a thorough and life-long lumberman, together with Jas. A. Fraser, Major A. J. Millar, Frank P. Shepherd and L. M. Chapman have formed themselves into a company and purchased a timber limit in the township of Champagne, near Capreol, on the C. N. R. This limit was purchased by tender from the Drury Government. It is intended to commence operations at once, taking out railway ties and pulp wood.

"In the absence of any special circumstances there will not be any criminal prosecutions until after the final report of the commissioners is made," says the Attorney General of Ontario in connection with the investigation now under way by Judges Riddell and Latchford into the administration of Crown lands in Northern Ontario. An interim report has already been presented recommending the prosecution of the Russell Timber Co. for alleged irregularities, and the Government have acted upon it to the extent of instituting civil proceedings against them.

A recent despatch from Thessalon says: George Haines, engineer on the tug "Penetang," was instantly killed. He was entering the engine room when the steam feed-pipe exploded. The full force of the released steam struck him fairly and it is thought by the crew that he was not scalded to death but killed by shock. At the time of the accident the vessel was working at the mouth of the Mississaugi, rounding up logs. The boat is the property of Hope Lumber Company, and the local manager, Mr. C. N. Carney, immediately on hearing the news, left for the scene of the disaster.

Eastern Canada

The sawmill of John D. McNeil at Castle Bay, N. S., was recently destroyed by fire.

The Brompton Pulp & Paper Company, East Angus, P. Q., are building a ground wood mill.

Alfred West, Westley West and William West, all of the Parish of Johnson, Queen's County, N. B., are incorporated as West Lumber Company, Limited, capital stock $290,000 and head office at Cole's Island. The company is authorized to carry on a general lumber business.

The East View Saw Mills Co., Limited, Cookshire, P. Q., was recently incorporated to manufacture and deal in logs, lumber and other forest products. Capital $50,000. R. H. Pope, senator, of Cookshire, and R. A. Pringle, barrister, of Ottawa, are two of the incorporators.

Miller & Gordon, Carleton, N. S., are improving their plant by adding one six foot, left-hand, single-cutting band mill, and one left-hand, 36 in. opening carriage with Waterous trailer, as well as a bull wheel, friction feed works, cut-off saw, live rolls, driving and filing room tools.

Joseph Milford Hawkins, Joseph Hawkins and James Hilton Hawkins, all lumbermen of the Parish of Douglas, York County, N. B., are incorporated as Hawkins Lumber Company, Limited, head office in Nashwaaksis, and capital stock $98,000. The company is authorized to carry on a lumbering business.

Several colored residents of Elm Hill, N. B., have been prosecuted by Fire Warden Thomas Bridges, of Sheffield, before Magistrate T. S. Peters on the charge of setting brush fires at Otnabog Lake, which resulted in the destruction of considerable pulpwood and lumber. Fines were imposed on the offenders.

Office Requirements, Limited, Sherbrooke, P. Q., was recently granted a federal charter to manufacture and deal in all kinds of office furniture, also paper preparations such as paper bags and cardboard boxes. Capital $50,000. Two of the incorporators are K. Forrest and J. R. Forrest, both of Sherbrooke.

The large sawmill of the B. & S. Lumber Co., of Fort Plain, situated at Tartigou, Rimouski County, Que., was burned to the ground recently. The blaze was discovered shortly after the mill had shut down for the day and although well equipped for fighting fire nothing could be done to check the flames which soon reduced the structure to ashes. By hard fighting and a

change in the wind the lumber in the yard was saved. The mill was a large one, 140 x 47 ft., with a shingle mill 30 x 60 ft. and was of modern construction. The loss is only partially covered by insurance. The company will rebuild at an early date.

The Standard Pulp and Paper Company, Limited, Quebec, were recently granted a provincial charter to conduct a business in the manufacture of sulphite and sulphate pulp and paper and all kinds of forest products. Capital $12,000,000. Two of the incorporators are J. Ball, manufacturer, New York city, and W. S. Bullock, manufacturer, Roxton Pond, Que.

A flying boat operated by the Laurentide Company, Ltd., Grand Mere, has completed an 850 mile trip through the northern woods. The trip was made for the purpose of timber exploration and the distance of woods travel was completed in 12½ hours flying. This trip has opened the eyes of many lumbering concerns to the extreme utility of aircraft in forest survey and patrol.

Mr. Ellwood Wilson, head of the Forestry Department of the Laurentide Co., Ltd., Grand Mere, is making arrangements to supply, for the permanent pulp and paper Canadian exhibit in London, twelve four-foot sample sticks of the kinds of wood used in paper manufacture. These samples will comprise jack pine, white and red spruce, poplar and balsam, and will have the bark on.

The Quebec Government has issued the statement of the receipts and expenditures of the province for the fiscal year ending 30th June, 1920. The revenue from Lands and Forests was $3,033,587, being nearly double the receipts from any other source of revenue, outside of the contribution by the Federal Government. The expenditure for the Lands and Forests was $566,000.

The new rotary sawmill which has been erected in Fredericton, N. B., by Gordon G. Scott, is now in operation. The output will be about 35,000 feet a day. Mr. Scott plans erecting an extension in the near future for turning out box shooks and will also erect a dressing plant. The output of the new mill will be used to supply local and provincial demands and the remainder will be shipped to the United States.

The Imperial Paper Mills, Limited, an English company, with five million dollars capital, has acquired the pulp mills of the Gulf Pulp and Paper Co., at Clarke City, P. Q., with lumber limits of 625,000 acres It is proposed to acquire further lumber limits. Mr. Frank W. Clarke is vice-president and general manager of the company and will continue in active charge of the operations of the company, as heretofore.

It is understood that Price Bros., Limited, have effected a large newsprint paper contract with the Daily Express, of London, England, at favorable terms. In this conunection it is pointed out that the newspaper which is one controlled by Lord Beaverbrooke, has been anxious for its newsprint supply for some time past and the contract is satisfactory to them. while it is also in line with Price Bros.' policy of enlarging their overseas market.

The Log Supply Co., of Montreal, were well represented at a dinner at Berthierville by the local Chamber of Commerce The company have spent over two millions and a half in erecting a splint factory there, and naturally prominence was given to this fact during the dinner. Mr. Hayes (president), who with Messrs. H. Grier and Morris, represented the Log Supply Co., offered to subscribe $1000 toward a hospital and to add another $1000 provided that $5000 was subscribed.

The Grand Lake coal areas of the G. H. King Coal Company, the northfield Coal Company and the A. D. Taylor Company have been purchased by the Miramichi Lumber Company for a price in the vicinity of $150,000 and the three areas will be consolidated and operated by the International Paper Company for the purpose of building up a unit for increased production during the coming winter, according to a despatch from Fredericton, N B. At present the output of the three mines is about 100 tons daily but the new owners will sink extra shafts and get an output of over 200 tons daily.

The Fraser Companies of Edmundston are making preparations for proceeding with the construction of dams on the Tobique River, and putting up a big pulp and paper plant at Tobique Narrows, a few miles from Andover in Victoria County. The Frasers are now obtaining options on the property and sufficient money will be raised to carry out the new project. The Fraser interests are now about ready to start work under the charter that they obtained from the New Brunswick Legislature at its last session, for a ten million dollar development scheme.

Western Canada

The sawmill of Frank Bevan, located at Extension, a mining village six miles from Nanaimo, was recently burned to the ground. The loss is $60,000.

Millions of feet of timber have been destroyed by a forest fire which swept along both banks of the Pelly River, B. C., for a distance of 160 miles, according to reports.

More than 8,000,000 feet of lumber will be loaded within the next month at British Columbia ports for the Canadian Trading Company of Vancouver, for shipment to foreign points.

Burglars who moved a small safe half a mile at Horn Dean, near Plum Coulee, Man., secured only $20 for their trouble. The safe was taken from the office of the Winkler Lumber Company and was blown open half a mile away.

So far this season there have been 754 forest fires in British Columbia, costing more than $71,458, according to the latest fire report of C. L. Cowan, acting chief forester. "Conditions are somewhat improved, but are still dangerous," the report says.

New companies have been incorporated as follows in British Columbia: Ford Lumber Co., Ltd., private, $25,000, Vancouver; Bevan Lumber & Shingle Co., Ltd., private, $60,000, Bevan, B. C.; Nigel Island Lumber Co., Ltd, private, $50,000, Vancouver.

At a meeting of the directors of the Victoria Shipowners, Ltd., Mr. J. W. Spencer resigned from the presidency of the organization, and Mr. Clarence Hoard, head of the Bainbridge Lumber Co., was chosen to replace him. Capt. M. D. Harbord was selected as vice-president.

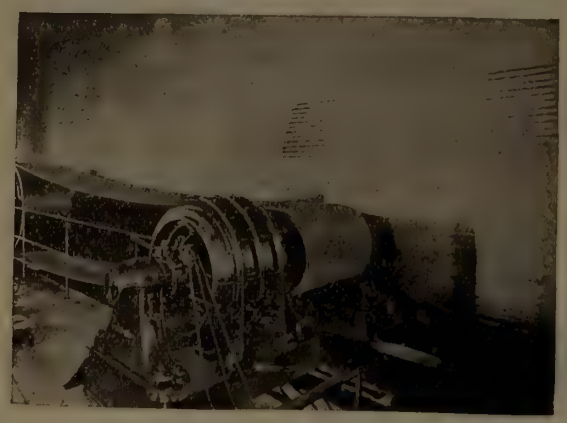
Toronto Blower Company

156 Duke St., Toronto

A 24-inch x 10-ply Leviathan, transmitting 350 H.-P. Installed ten years—now in good condition.



A 75-foot x 48-inch x 10-ply Leviathan, 500 H.-P., 3-phase, 60 cycle, 2,300 volts, 600 R.P.M.; has been carrying a 600 H.-P. load since 1914.

A 16-inch x 8-ply Leviathan that is giving good service.

Main Belting Company's Style "C" Troughing Roller.

LEVIATHAN-AN

are constructed upon scientific knowledge, not guesswork — upon the principle of building a material to fit the power service conditions, not making service conditions fit the belting material.

These belts are constructed of solid woven fabric, of tremendous strength and durability, so treated, stretched and aged as to make a pliable belting material that is practically indestructible—has wonderful strength and tractiveness, toughness and smoothness of running—and in which the ruinous factors of "stretch" and "slip" are definitely eliminated.

The tension at which **Leviathan-Anaconda** Belts

THE "LEVIATHAN"

is a general purpose belt of extraordinary strength and toughness combined with pliability and smooth running qualities that enable it to abundantly meet the maximum power demands of heavy duty service in transmission, elevating, and conveying drives.

It is built to pull loads—to stand up and deliver anything but the impossible. It is perfectly "at home" on the heavy drags, under incessant loads, unyielding pulls, where loads are intermittent, and in all conditions where the belt must shoulder great responsibility.

Leviathan belts are stretched perfectly in their making —doing away with the ruinous "stretch" (with its resulting power and production loss) of "natural material" belting, and thereby maintaining limit of machine production through extreme limit of power transmitted.

The combination of strength and tractiveness, toughness and flexibility, built into the **Leviathan,** is found in no other belting in equal degree. These are the belting qualities so requisite in heavy conveying and elevating service —also for heavy main drive, countershaft, jackshaft and important machine transmission. On all such drives, the **Leviathan** delivers the last ounce of power expected of it.

The power user buying belting for strenuous, arduous and wearing Conveying, Elevating and Transmission service, must come to understand that the ruggedness, toughness, strength and tractiveness, so vitally essential to best results in such service, cannot grow into a belt, but must be built into it. He will then understand why **"Leviathan"** serves best and lasts longest.

The extreme tractiveness—absolutely lasting—of the **Leviathan,** makes it enormously successful in drives where the quality of the product depends upon smooth, steady running. For Conveying and Elevating heavy or abrasive materials, such as shale, stone, coal, sand, gravel and similar substances, the **Leviathan** stands supreme. The toughness and flexibility absolutely required for this sort of work, is definitely attained.

MAIN BELTING CO. OF CANADA

ACONDA BELTS

are stretched is in exact and definite proportion to the strength of the belt and the load it is intended to carry.

It inevitably follows, therefore, that in these belts there is always a positive and definite balance between the power (load) to be delivered, and the belt's ability to deliver that load under every working condition.

This scientific adaptation of **Leviathan-Anaconda** Belts' construction to the especial class of service to which they are to be applied, accounts for guesswork giving way to guaranty—for expectation becoming realization—in their service.

THE "ANACONDA"

possesses the material and constructive features that qualify it in all manner of heavy duty and responsible transmission, conveying and elevating service. It is a special belt, made to meet the conditions of service wherein it stands without a rival for producing unusual results.

The **Anaconda** is the most effectively waterproofed belt made—waterproofed through and through—not affected by atmospheric changes or varying degrees of wetness, but retaining this quality during its life. Its special construction renders it immune to steam, condensation of drippings from ceilings and side walls, and where belt, pulleys and everything else is soaking wet.

The **Anaconda** is also highly resistant to the destructive action of chemicals. It is treated with materials that are chemically inert, thereby counteracting chemical action of acids, alkalis, gases, etc.

Tremendous resistance to heat—such as would wither most belting—is another distinctive **Anaconda** quality. Wet pulleys tend to make belt slip, while high temperatures produce excessive "stretch"—and also warp the ordinary belt. The **Anaconda** operates equally well under any temperature conditions.

The **Anaconda** also gives especially successful service on heavy duty drills, grinders, turret lathes, saws and all machines that use liquid cutting compositions; this by reason of its immunity to heat, acids, moisture, etc.

The **Anaconda's** wonderfully effective tractive qualities, along with its freedom from "stretch," insures it operating with unusual success under wet conditions at high speed, both of which produce more or less ruinous slippage with other belts.

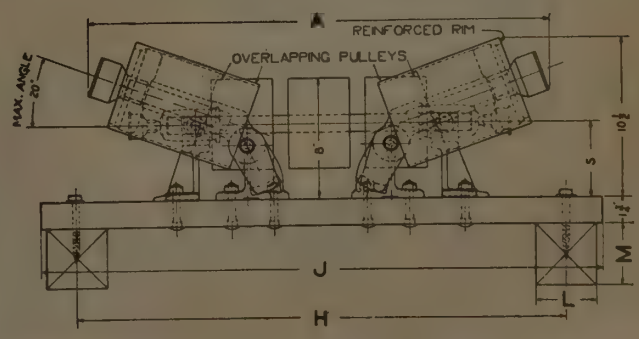
"Natural material" belts are not equipped, either in material or construction, to deliver the quality or quantity of power, under varied and distinctive belt working conditions, as assured by the **Anaconda**.

LIMITED, 10 St. Peter St., Montreal

An 825-foot x 36-inch x 6-ply Anaconda, installed March 4th, 1912. Handles 1000 tons stone per day; in as good condition as when first installed.

A 480-foot x 24-inch x 6-ply Anaconda. Conveying Hot Crushed Rock from Dryers in Cement Plant. Carries 2000 tons per day, 24 hours' constant work.

A 110-foot x 46-inch x 10-ply Anaconda Bucket Elevator Belt. Handles 1,750 tons Crushed Rock per day.



Main Belting Company's Style "C" Troughing Roller.

Handy Machines

These small, handy machines for those *"odd jobs"* which are continually turning up, will help get the work out quicker, besides doing them a whole lot cheaper.

They are built right, will give excellent results and long, satisfactory service.

THEIR COST IS SMALL AND THEIR SAVING LARGE

Full descriptions, details and prices on request.

The Standard Hoist for Loading and Skidding Logs
Made with either one Drum, or two Drums, as shown, and in seven sizes, from the little 10 horse power machine to the massive 50 horse power size.

POWER LOADING

Is the fastest and most economical method of loading logs as proven by the experience of thousands of camps.

USE EITHER STEAM OR GASOLINE AS YOU PREFER

One Ontario Lumberman is using 7 machines same as shown in the illustration. With each of these he can load up to 2,000 logs per day. He uses the 20 H.P. and the 25 H.P. sizes. He uses these machines for only two months each year, but even at that he finds them a good paying investment.

The Gasoline machines will do the same work exactly as the steam, and are much lighter in weight, therefore easier to move around. Their price is also much less. They are made in the same 7 sizes as the steam power machines, from 10 horse power up to 50 horse power. The 10 H.P. size will load up to 1,000 logs per day.

Our booklet "Suggestions for the Lumberman" describes many methods of using these machines for both Loading and Skidding. If you have not a copy, write us, and one will be sent you free of charge.

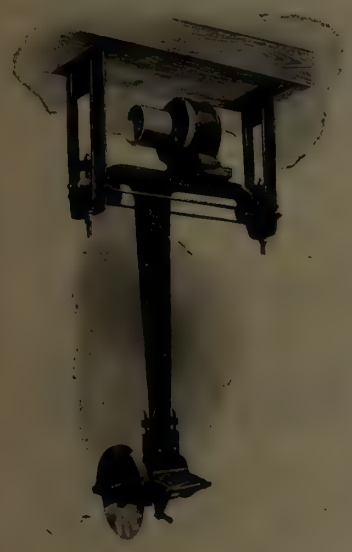
MACHINISTS and ENGINEERS

BOILERS, DONKEY FRAMES, and all HEAVY MACHINERY, CASTINGS, Etc., treated by our special process.

30-36 Britain Street, St. John, N.B.

The Position of the Motor



Is one of the important features on the No. 135 Motor-driven Swing Saw as it is so placed as to assist the operator in pulling through the stock. This is the simplest and most efficient swing saw ever devised. Adjustable Headstock, saw guard that fully protects the operator and sturdy construction make it the logical swing saw to purchase.

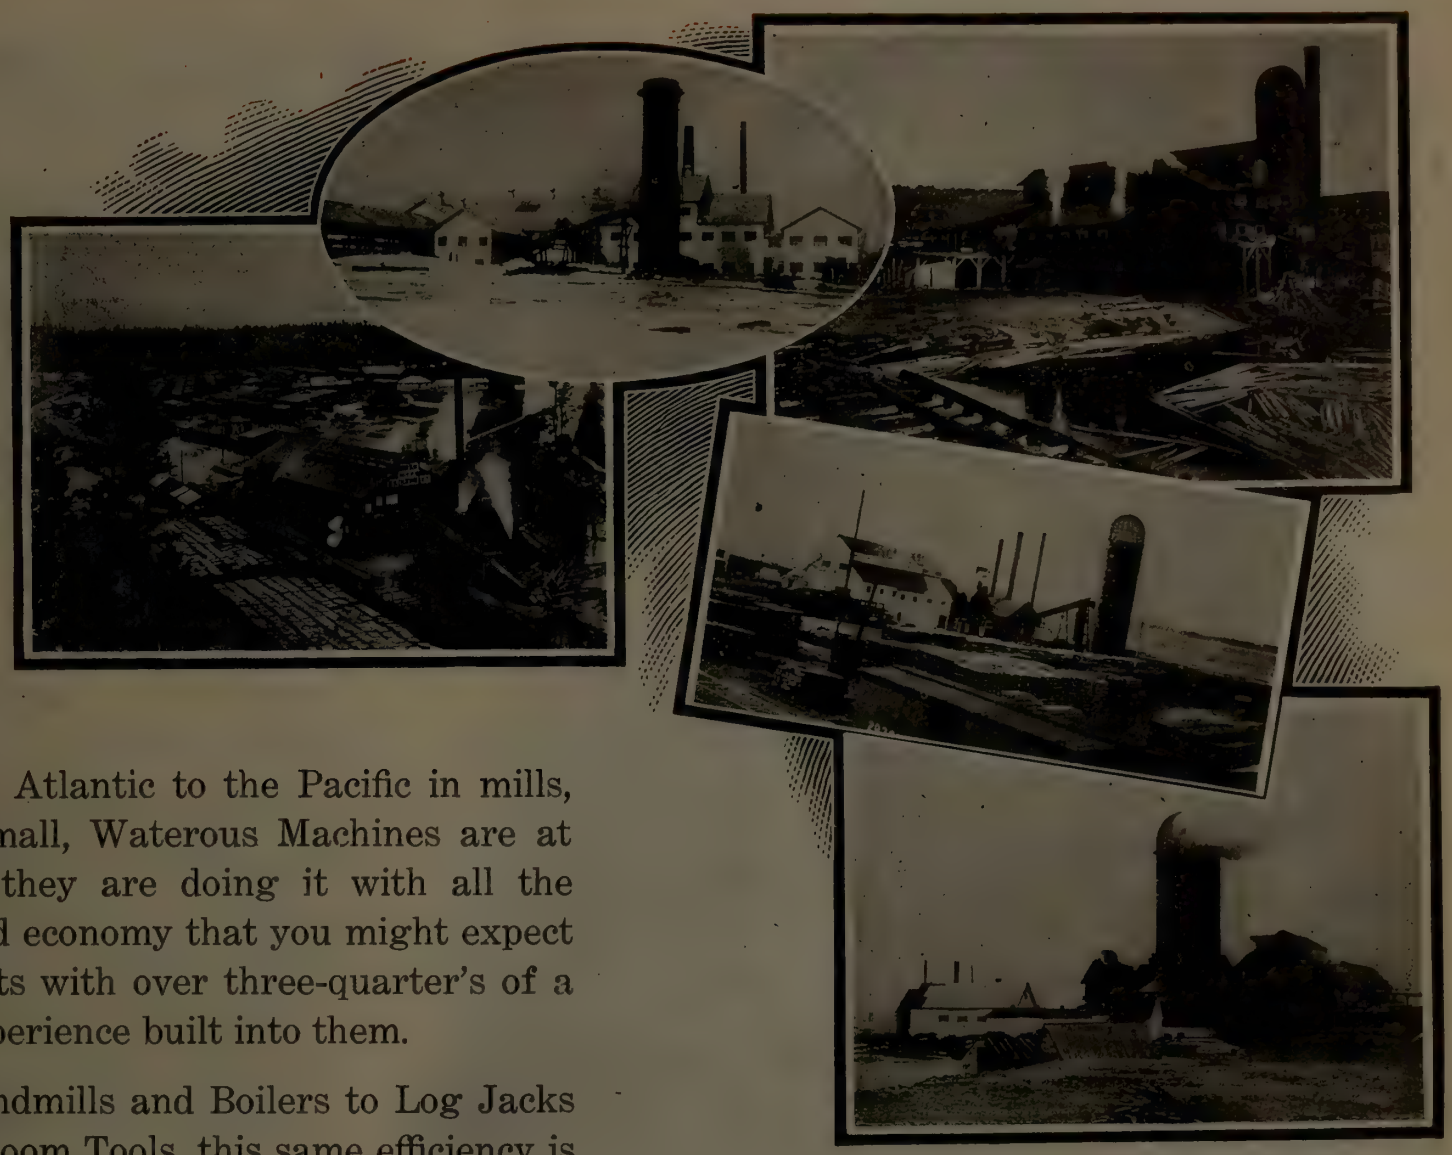
Across Canada



From the Atlantic to the Pacific in mills, large and small, Waterous Machines are at work. And they are doing it with all the efficiency and economy that you might expect from products with over three-quarter's of a century's experience built into them.

From Bandmills and Boilers to Log Jacks and Filing Room Tools, this same efficiency is making for a higher grade lumber and the saving of time, labor and money.

Full information, plans and prices, catalogues, etc., promptly mailed upon request. Write our nearest agency.

There is a Waterous product in operation near you. Let us send you the location, so that you may see it under actual working conditions.

WATEROUS

"New Model" Waterous Band Mills

—A machine designed and constructed by engineers whose knowledge of Canadian Mill conditions and requirements was absolute. You can therefore, expect greater speed, safety, ease of handling and general freedom from trouble when employing this model.

There are ten sound reasons for the Waterous Band Mill being your choice. Here are three of them—It is built in 8, 9 and 10 ft. sizes—one for every kind of work. The upper guide is raised and lowered by steam —an accurate, easy and swift adjustment unequalled by any other.

Every part of the mill is designed to make millwrighting easy and adjustments and inspections can be made without difficulty.

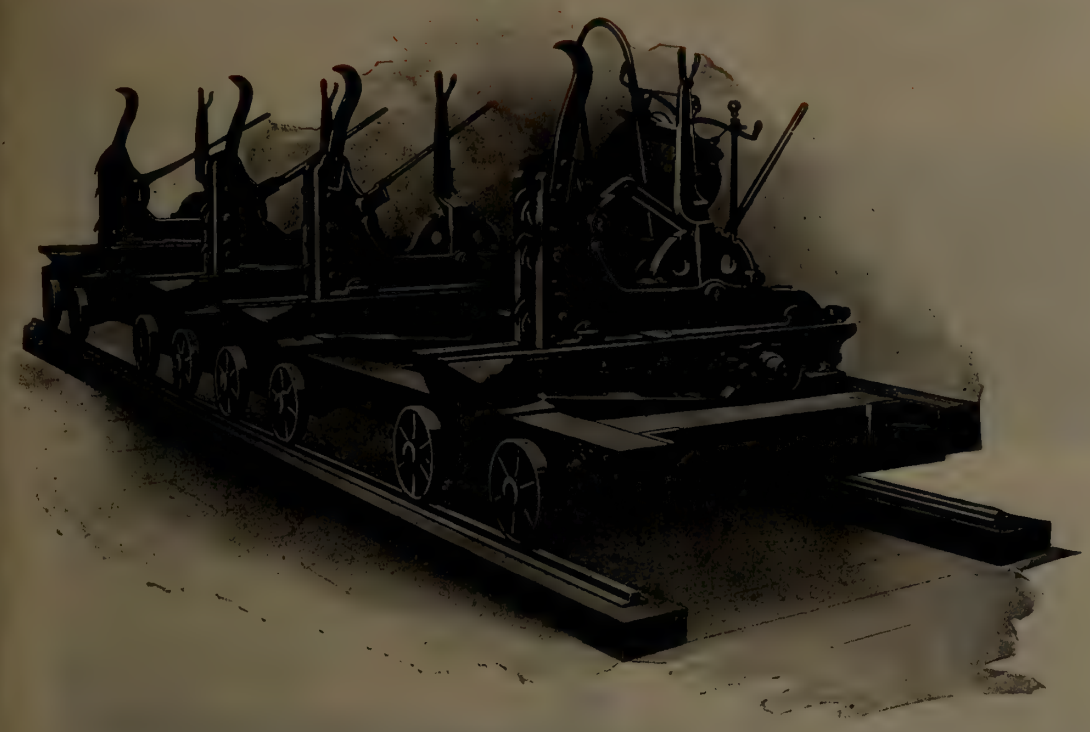
If you do not know the other seven, a postcard will bring them, together with full specifications.

Waterous

BRANTFORD, ONTARIO, CANADA

MOLSONS BANK BLDG., VANCOUVER, B. C. - - WINNIPEG, MAN.

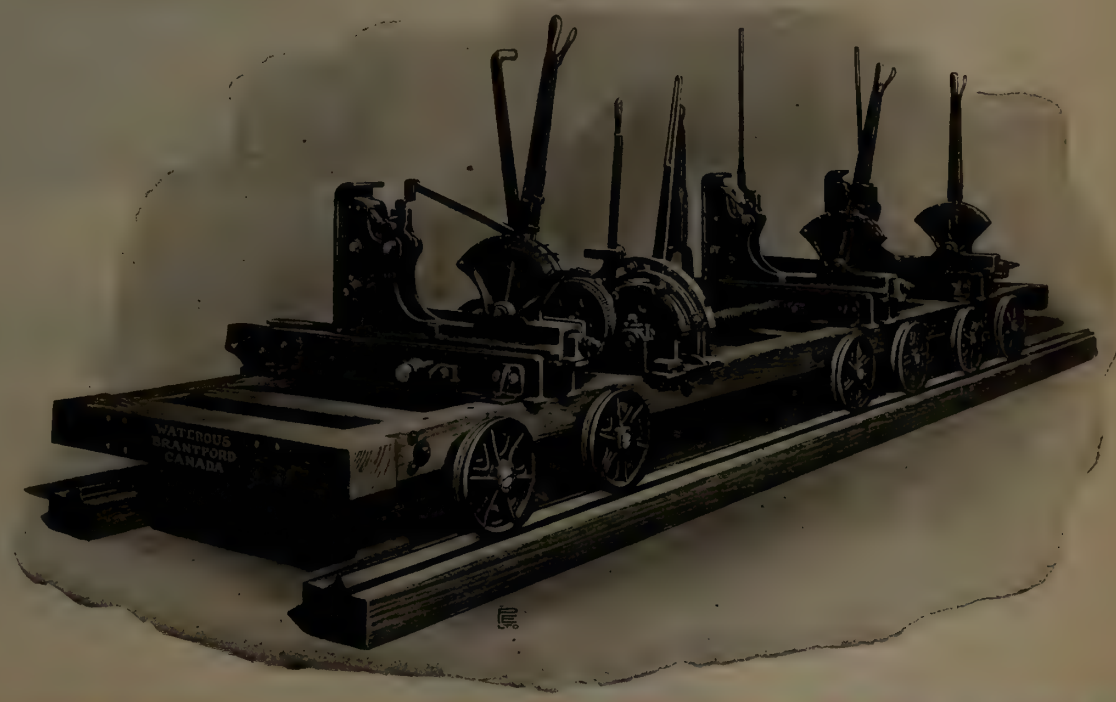
EQUIPMENT



Other Waterous Products are

Log Jacks
Log Deck Equipment
Sawmill Carriages
Refuse Conveyors
Band Mills—6, 7, 8, 9 and 10
Circular Saw Mills
Edgers—all sizes
Filing Room Tools
Lath Mills and Bolters
Log Chains
Log Slashers
Planers
Sawmill Engines
Power Plants Complete
Boilers—all kinds
Refuse Burners

For fast cutting, for accuracy, and with that ability to stand up under hard service, Waterous Sawmill Carriages have no superior. Everything that enters into their make-up—frame, knees, log-seats, dogs, setworks and accessories—represents the highest grade of materials. Many improvements, the result of our long experience in this work, characterize these machines. Built in all sizes for medium and large mills, adaptable for rope or steam feed.



Waterous

This Real Belt Will Help You in a Real Way

SEAL OF QUALITY
DUNLOP
RUBBER PRODUCTS

Our Belt Dept. will aid you in cutting Belting Costs

"Gibraltar RedSpecial" Belting (Frictioned Surface)

It will cut down your operating expenses—eliminate time-wasting, costly delays.

It will add considerably to the daily volume of work by keeping the machinery on the hum, without slipping, which causes a noticeable reduction in the output, because of the constant slowing up and "jerky" action.

This belt saves power and conserves fuel.

Doesn't even need an occasional adjustment to take up stretch.

Is practically immune to atmospheric changes.

LEATHER-BELTING

Cuts the Cost of Transmission

With D. K. McLaren's Genuine Oak Tanned Leather Belting on your pulleys, you have no costly stoppages from breakdowns, nor loss of power from sagging belting, but a continuous supply of power that keeps production up to the highest pitch, and relieves your engineer of anxiety and extra work. That is why so many lumbermen are particular to see that our trade mark is on all their belting. It means minimum transmission costs and maximum power.

Carefully selected hides and our oak tanning process guarantee the qualities that ensure this superior and reliable belting.

Let D. K. McLaren's Oak Tanned Leather Belting take care of your transmission problems for you.

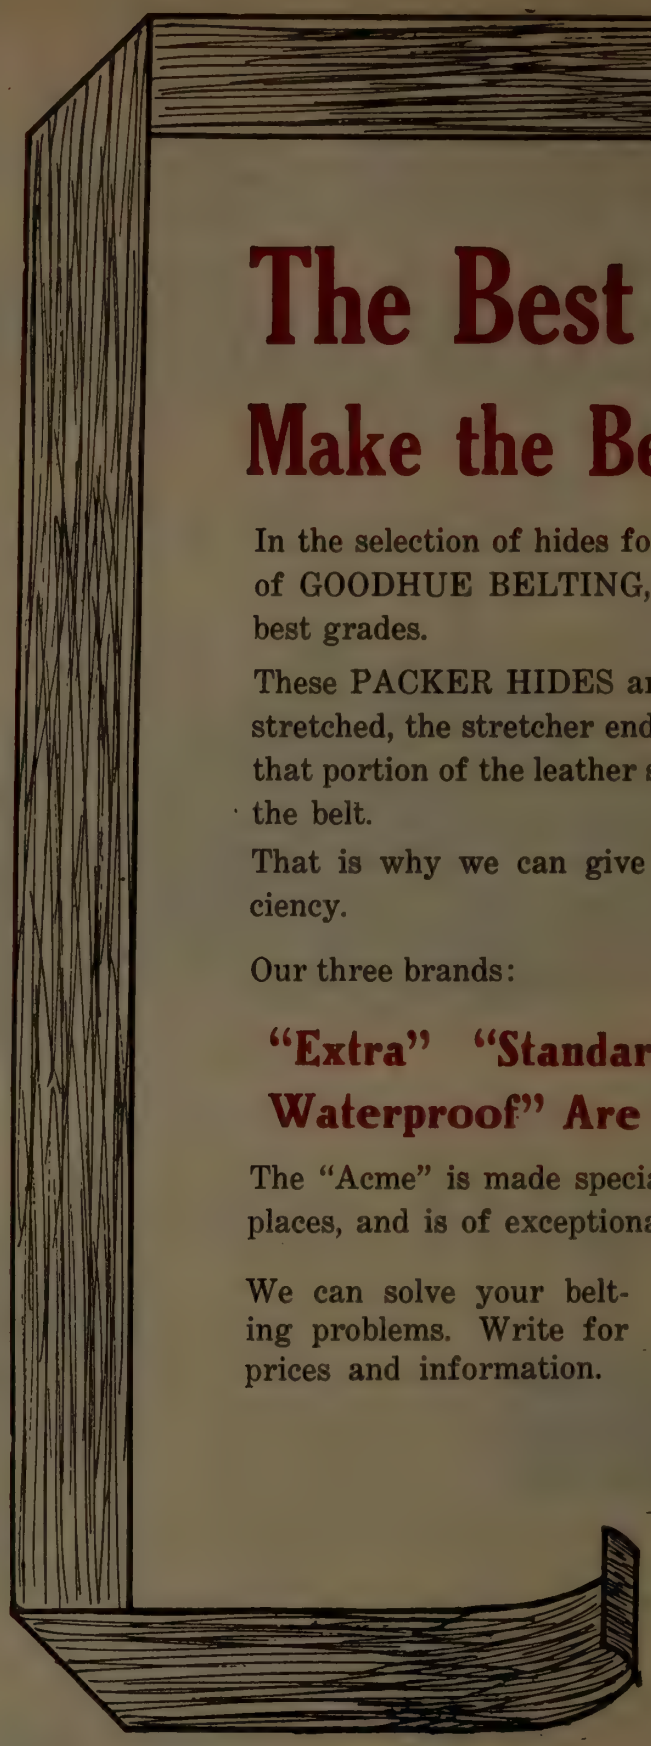
GOODHUE

From Factory to Your Mill



The Best Hides Make the Best Belts

In the selection of hides for the manufacture of GOODHUE BELTING, we take only the best grades.

These PACKER HIDES are well tanned and stretched, the stretcher ends cut off, and only that portion of the leather stretched goes into the belt.

That is why we can give 100% power efficiency.

Our three brands:

"Extra" "Standard" "Acme Waterproof" Are Unequalled

The "Acme" is made specially to run in wet places, and is of exceptional quality.

We can solve your belting problems. Write for prices and information.

Make Saws Cut And Planers Hum

Your saws may be well filed, swaged nicely and rounded perfectly, but unless your mill's belting is correct you do not get an honest day's work from your machinery.

You will find potential assistance and an increased output by using Graton & Knight Standardized Series Leather Belting. This series is composed of a number of brands and types of belting standardized both in manufacture and application.

Why not avail yourself of the opportunity of calling in a G & K engineer and letting him analyze your power transmission. You incur no obligation for this service. Your power transmission must be right if your production is going to be right.

Every G & K Belt will give rugged service because it is built for this kind of service. Your saws will cut and your planers will hum a real tune when your plant is standardized on G & K Leather Belting.

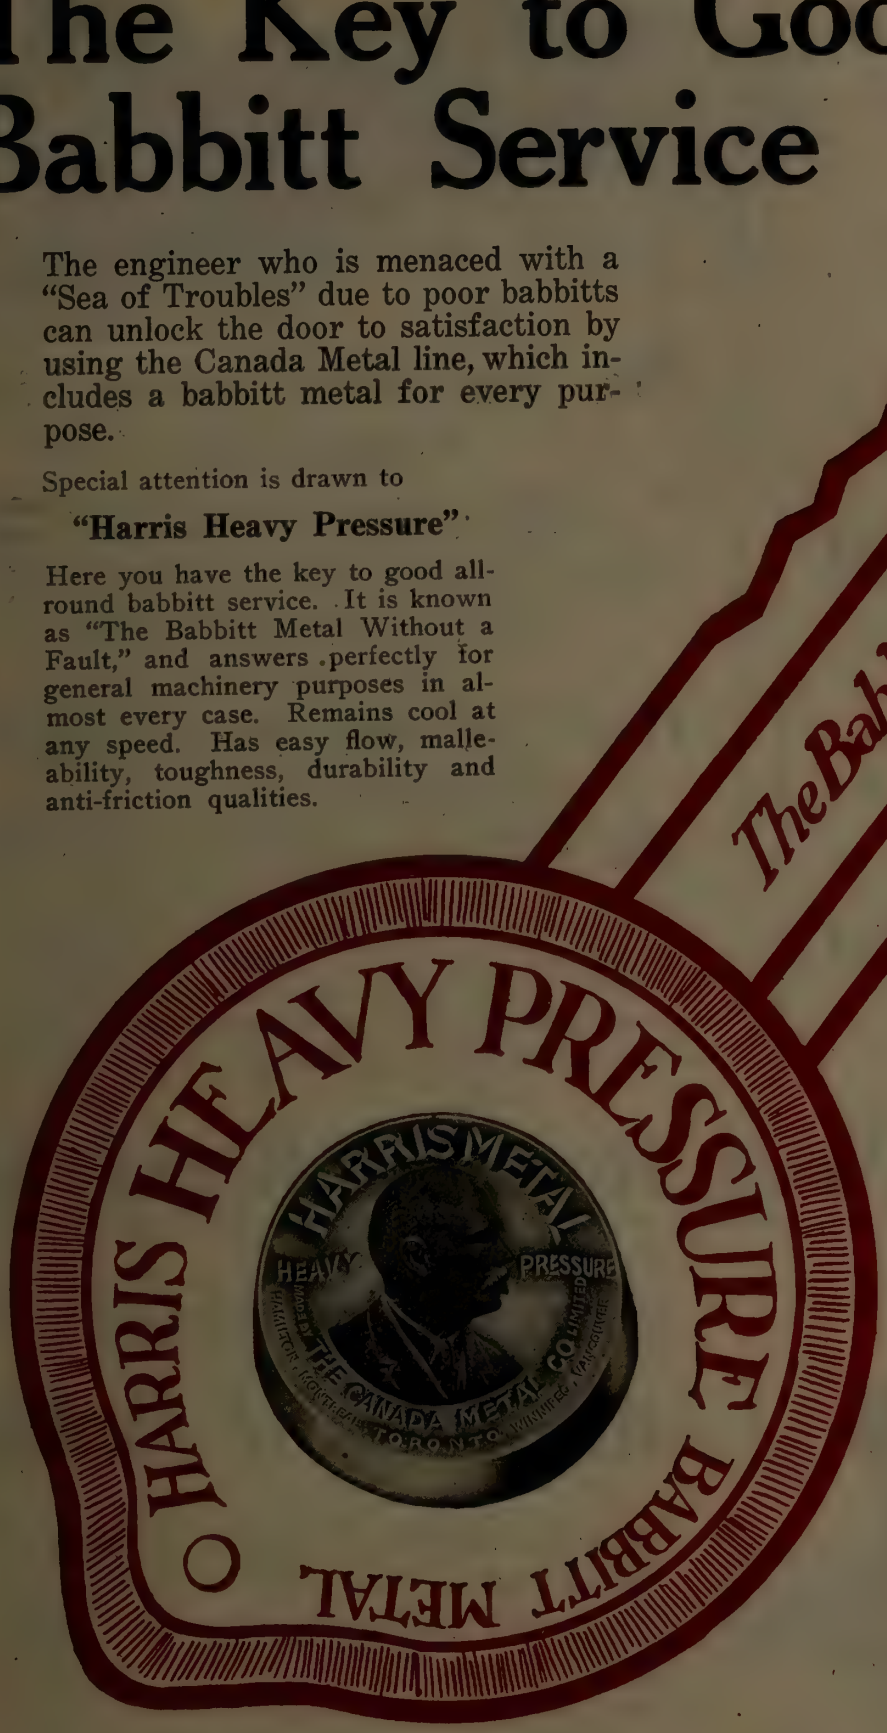
The Key to Good Babbitt Service

The engineer who is menaced with a "Sea of Troubles" due to poor babbitts can unlock the door to satisfaction by using the Canada Metal line, which includes a babbitt metal for every purpose.

Special attention is drawn to

"Harris Heavy Pressure"

Here you have the key to good all-round babbitt service. It is known as "The Babbitt Metal Without a Fault," and answers perfectly for general machinery purposes in almost every case. Remains cool at any speed. Has easy flow, malleability, toughness, durability and anti-friction qualities.



Harris "Heavy Pressure" has on the upper side a profile of Mr. W. G. Harris, Sen., president and founder of the Canada Metal Company, who is recognized as Canada's greatest authority on White Metal Alloys. His experience and genius are reflected in all Canada Metal products.

Babbitt Metals for Every Purpose

Imperial Genuine, Imperial Tough, Armature Special, White Brass, Metallic Genuine, Harris Heavy Pressure, Hercules, White Bronze, Star Frictionless, Aluminoid.

We have large stocks of

LEAD PIPE
SHEET LEAD
SOLDER and all
INGOT METALS

and can make prompt shipment from all our factories

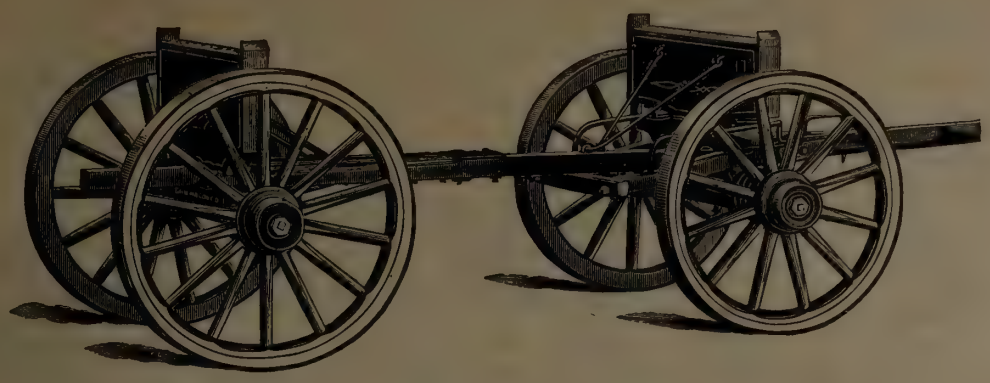
PETERBOROUGH, ONT.



THE

Bain Log Wagon

or Lumber Truck

Especially constructed to meet the wants of lumbermen, these trucks have given complete satisfaction in the many years we have built them. They are not carried in stock as we make them of any required dimensions to suit purchasers. They can be furnished with Cast or Steel Thimble Skeins, both being supplied with Flat Truss Rods. Now is the time to send in your order for one of these sturdy, made-to-your-order trucks as a reasonable length of time must elapse before we can make delivery of same.

Bain Sleighs and Bain Wagons are made from material thoroughly air seasoned in our own sheds. Good material is the first essential in the construction of a reliable wagon or sleigh. Bain wagons and sleighs are built in one of the largest and best equipped, factories in the country,—they are scientifically constructed from good material. Bain Wagons and Bain Sleighs stand the test of time.

The Bain Heavy Sloop Sleigh is our heaviest and strongest sleigh and is built for those desiring a sleigh for heavy logging operations. It is furnished without bunks, as most loggers prefer to make their own. It is furnished with cross chain coupling or short reach as ordered. When used with cross chains, the hind bunk swings same as the front, a king bolt being supplied, as shown in the cut.

THE BAIN

Heavy Sloop Sleigh with Steel Shoes

Clearance under Beam 7 inches.

Seven O'Clock!

What Does It Mean to YOUR Profits?

According to your rules, those who work in your mill or factory, must report for duty at **SEVEN O'CLOCK.**

This does not mean that they may drift in, 5-10-or perhaps 15 minutes late—and let it go at that.

If say, 100 men in a factory lose only one minute each "arrival" and "departure" daily, it means 22 minutes per week each employee, or 2200 minutes for these 100 employees. This is 37 hours per week—at say 50c hour—meaning a loss of $18.50 weekly, bringing the total to $962.00 in the year—which **must** come from the net profits. Pretty stiff price for doing without a time recording equipment—and this is apart from production loss.

The International Time Recorder is the modern and reliable method of checking each employee's time, and stopping this leak. It is our business to stop "time leaks." We plug them tight.

Let us send further details.

International Business Machines Co. Limited

Head Office and Factory, 300 to 350 Campbell Avenue, Toronto

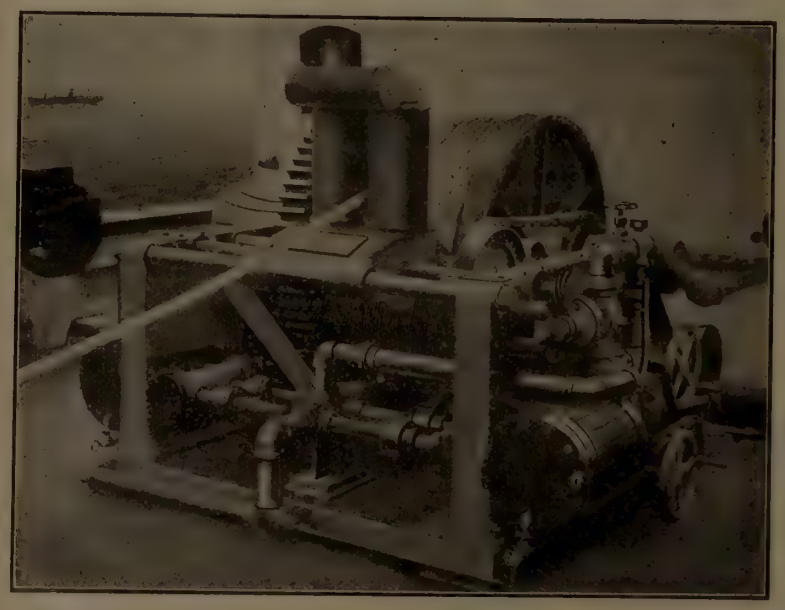
Seagrave-Loughead Co., Ltd., Sarnia, Ont.

Some territory still open for Live Representatives

Modern Marine Machinery



Made in 5 sizes to accommodate steel hawsers ⅝" in diameter up to 2" diameter

Our Line Includes Steam Capstans, Deck Winches, Cargo Winches, Steering Engines, Ship Windlasses, Hydraulic Freight Hoists

Corbet Automatic Towing Engines

Consider these facts and then decide whether you can afford to operate your tugs and barges without a Corbet.

It is operated entirely by one man. The Steel hawser with which it is equipped will outlast the old manilla lines 15 to 1. The automatic release and take up valve prevents the breaking of the hawser and the losing of the tow in rough weather——there is always an even tension on the hawser with no jerk. It saves labor because the tug can be operated with less men, saves money in cost of hawsers and saves time because the tow goes faster.

"CANADA" DEPENDABLE WIRE ROPE

The strongest rope is none too good for service in the mill or camp. Here particularly a sudden break may result in loss of life or property—or a costly shutdown. To meet the severe tests imposed in this kind of work we have constructed steel wire ropes and cables best suited for logging and mill purposes.

Where unusual conditions require special equipment we cheerfully place our staff of laboratory experts and designers at your service.

LION BRAND CORDAGE

1825

Has Served the Lumberman for Ninety-Five Years

In the lumber industry, men — machinery — products—have to make good or they are soon left behind, discarded, forgotten. It's the same way with cordage. New brands make their appearance, sometimes they make good, very often they fail because they haven't the knowledge of the lumberman's requirements built into them. That's why we like to tell people that LION BRAND CORDAGE has been in the game for ninety-five years—nearly a century—it's one of the best proofs we know of that LION BRAND has "made good."

Sturtevant

REG U.S. PAT OFF

PUTS AIR TO WORK

The Whirlwind that Sits on a Knife

and does as much work as all the men in your shop—who are in a much more comfortable position!

For no matter how hard they work at the machines—no matter how many chips, shavings, and how much dust and powder they make—a

Sturtevant

(TRADE MARK)

PLANING MILL SYSTEM

with its powerful draft right at the tool edge, carries them like lightning away outside, giving the workman every chance in the world to turn out his best work.

A Sturtevant Planing Mill System

—keeps the work nice and clean at all times

—leaves the air free from dust and powder, and wholesome for the workers to breathe

—allows no refuse to gather and form a fire risk

—prevents all litter which might work into the machines.

Special Bulletin No. 261 C tells of the benefits of Sturtevant Planing Mill Systems now in use by many mills

MADE IN CANADA

For Outside Drives— KLINGTITE—An All-Weather Belt

The service given on outside drives by Goodyear Klingtite Belting (formerly Extra Power) is unusual enough to be of interest to every belt user.

Not because there are a great number of outside drives—but because the outside drive is just about the ultimate test of a belt's ability.

The specially designed fabric of Goodyear Belting gives it the strength to withstand brutal outside service.

But the best of cotton will rot and whip to pieces outdoors if not protected.

So we have forced generous quantities of high-grade rubber through and through the plies of Goodyear Klingtite Belting, forming one solid unit, proof against weather and ply separation, yet flexible, pulley-hugging, efficient.

The special friction surface on Goodyear Klingtite Belts (formerly Extra Power) grips through dust or moisture and prevents slipping.

How well these belts serve is evidenced by this letter from the Beaver River Lumber Co. regarding their Extra Power Belt (now Klingtite). At last report (June, 1920) **this belt was still in service after 32 months' use,** when this mill was burned recently.

In their letter the Beaver River Lumber Co. say: "The belt driving the conveyor runs direct from a small engine to the conveyor drive. It is subject to steam and heat in the engine room and to cold and dampness on the outside. Under these conditions, there is no sign of deterioration and there is no slippage."

The same testimony is advanced by hundreds of farmers and threshermen who bought Goodyear Klingtite Belts (under their old name of Extra Power) for severe outside service on the farm.

If you have an outside drive, by all means investigate Goodyear Klingtite Belts. If you have **any** transmission drive, let a Goodyear Belting man show you how Goodyear Belts, which are good enough for outside service, will render heaping value on inside work. Phone, wire or write the nearest Goodyear Branch and a man will call without obligation to you.

KLINGTITE BELT

LOG LOADING

Use your motor truck for this work by installing a BAY CITY WINCH.

You can load your truck or a trailer without other power than the truck engine. It saves time, money, men and labor.

Bay City Foundry & Machine Co.
1601 Water Street **BAY CITY, MICH.**

Not altogether what we say, but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

St. Catharines, Ontario

Indestructible

What does a breakdown mean at the average pulp or saw mill?

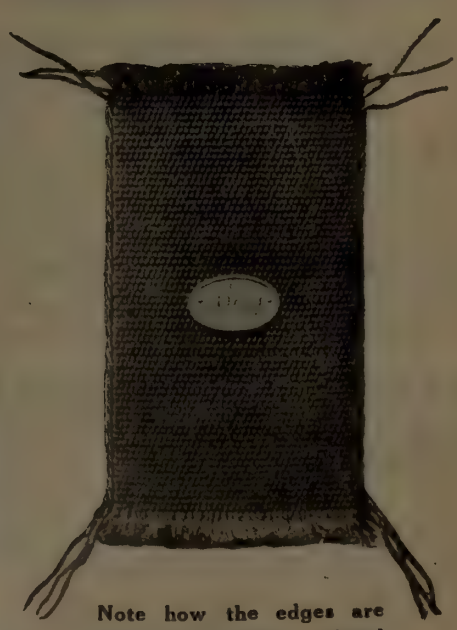
It means idle men, loss of time production and profit, also the expense incurred for repairs.

There are no breakdowns where "Gripoly" is used.

"Gripoly" is made in Great Britain by Lewis & Tylor, Limited

"GRIPOLY" is a solid woven water-proof belting with patent indestructible edges that cannot fray, composed of 85 per cent. pure camel hair and 15 per cent. long staple cotton. "GRIPOLY" insures the utmost supply of power constantly, and at a minimum of belting expense

Write for Information



Note how the edges are composed of triple twisted strands, absolutely indestructible, defying the friction of shifters, guide forks, or flange pulleys.

Hose Built to *Modern* Specifications

MOST equipment of fifty years ago has little place in modern industrial plants. Improved methods are constantly needed to keep pace with modern standards of production and efficiency.

Yet until Goodyear entered the hose field, rubber hose was built in much the same old-fashioned manner as it had always been.

But Goodyear went into the foundry, the mine, the paper mill, the railway, the steel plant—studied the *actual* conditions industrial hose must meet in use.

Then new standards were set. A *better* hose was developed to meet the demands of modern industry.

The cover on ordinary water hose was found inadequate to protect it against the sharp objects over which it is constantly dragged. In a great many cases this cover was cut through and the hose destroyed long before it had given the service it should.

To prevent this, Goodyear Water Hose is fitted with a thicker-than-usual cover of exceptionally tough rubber. A cover that prevents wear and gives longer life to the hose.

Added to the good inner tube and strong fabric, it explains why Goodyear Water Hose has set a new standard fo. economy and freedom from hose troubles.

The efficient construction and unusual economy of Goodyear Water Hose is characteristic of all Goodyear Industrial Hose.

A man trained by Goodyear in hose problems will call upon you without obligation. Phone, wire, or write the nearest branch.

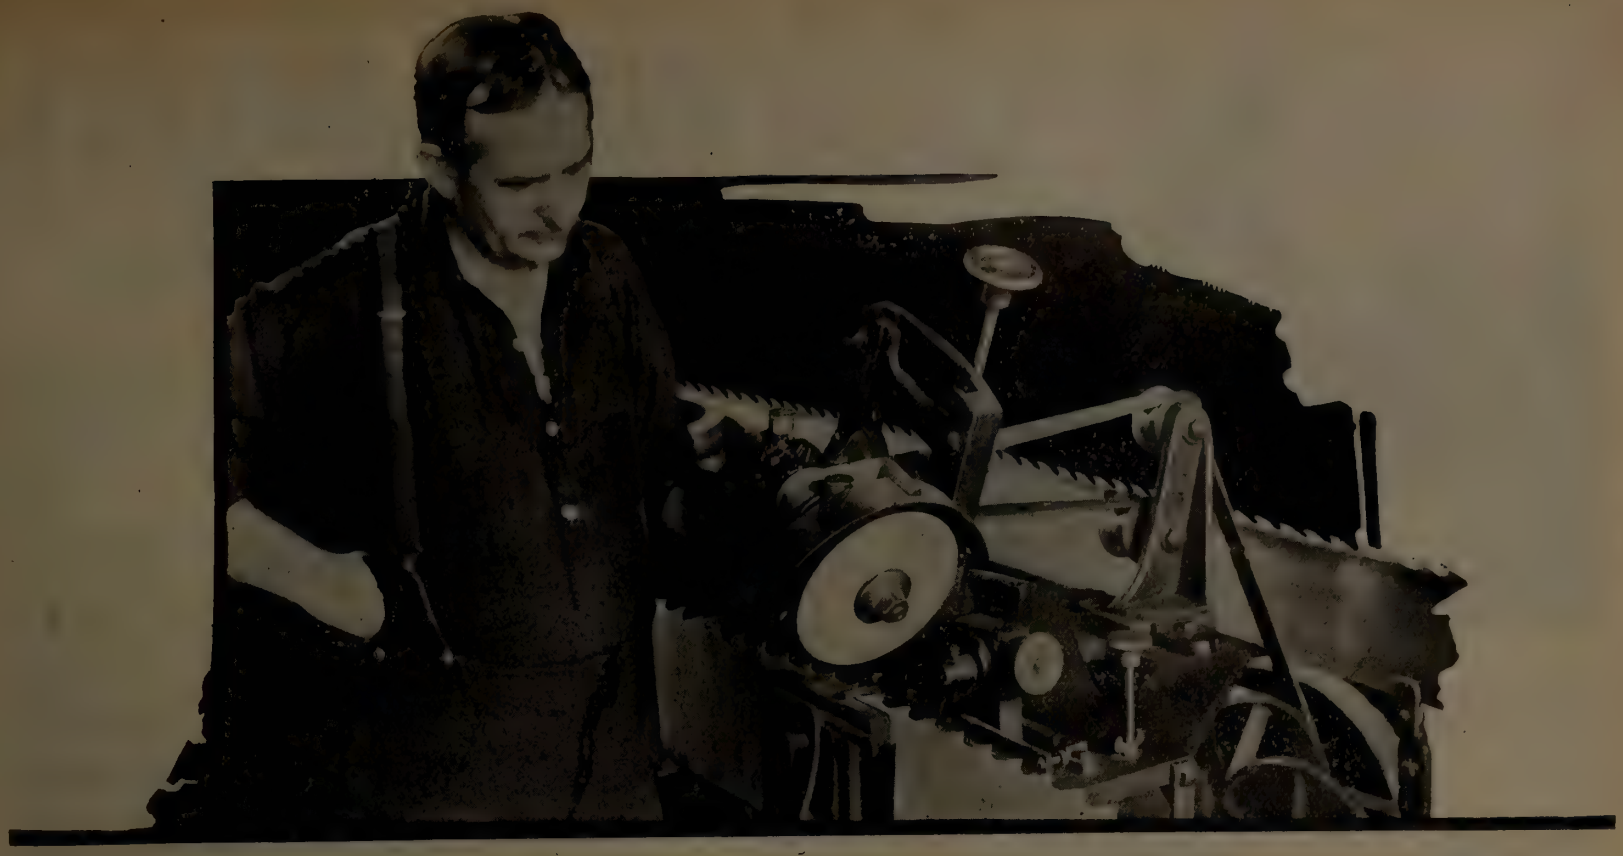
INDUSTRIAL HOSE



The High Cost of Poor Wheels

IT costs a lot of money to attempt to gum saws with inferior grinding wheels. You can reckon your loss in burned, case-hardened saw teeth, checked and cracked blades —in the wasted time of the filer—in the poor performance of the saw.

Just plain ordinary common sense says that saws should be ground with wheels that cut cool, clean, fast and true—that hold their shape—that stand up to the job, doing the work without being dressed every few minutes.

You will find exactly those qualities in

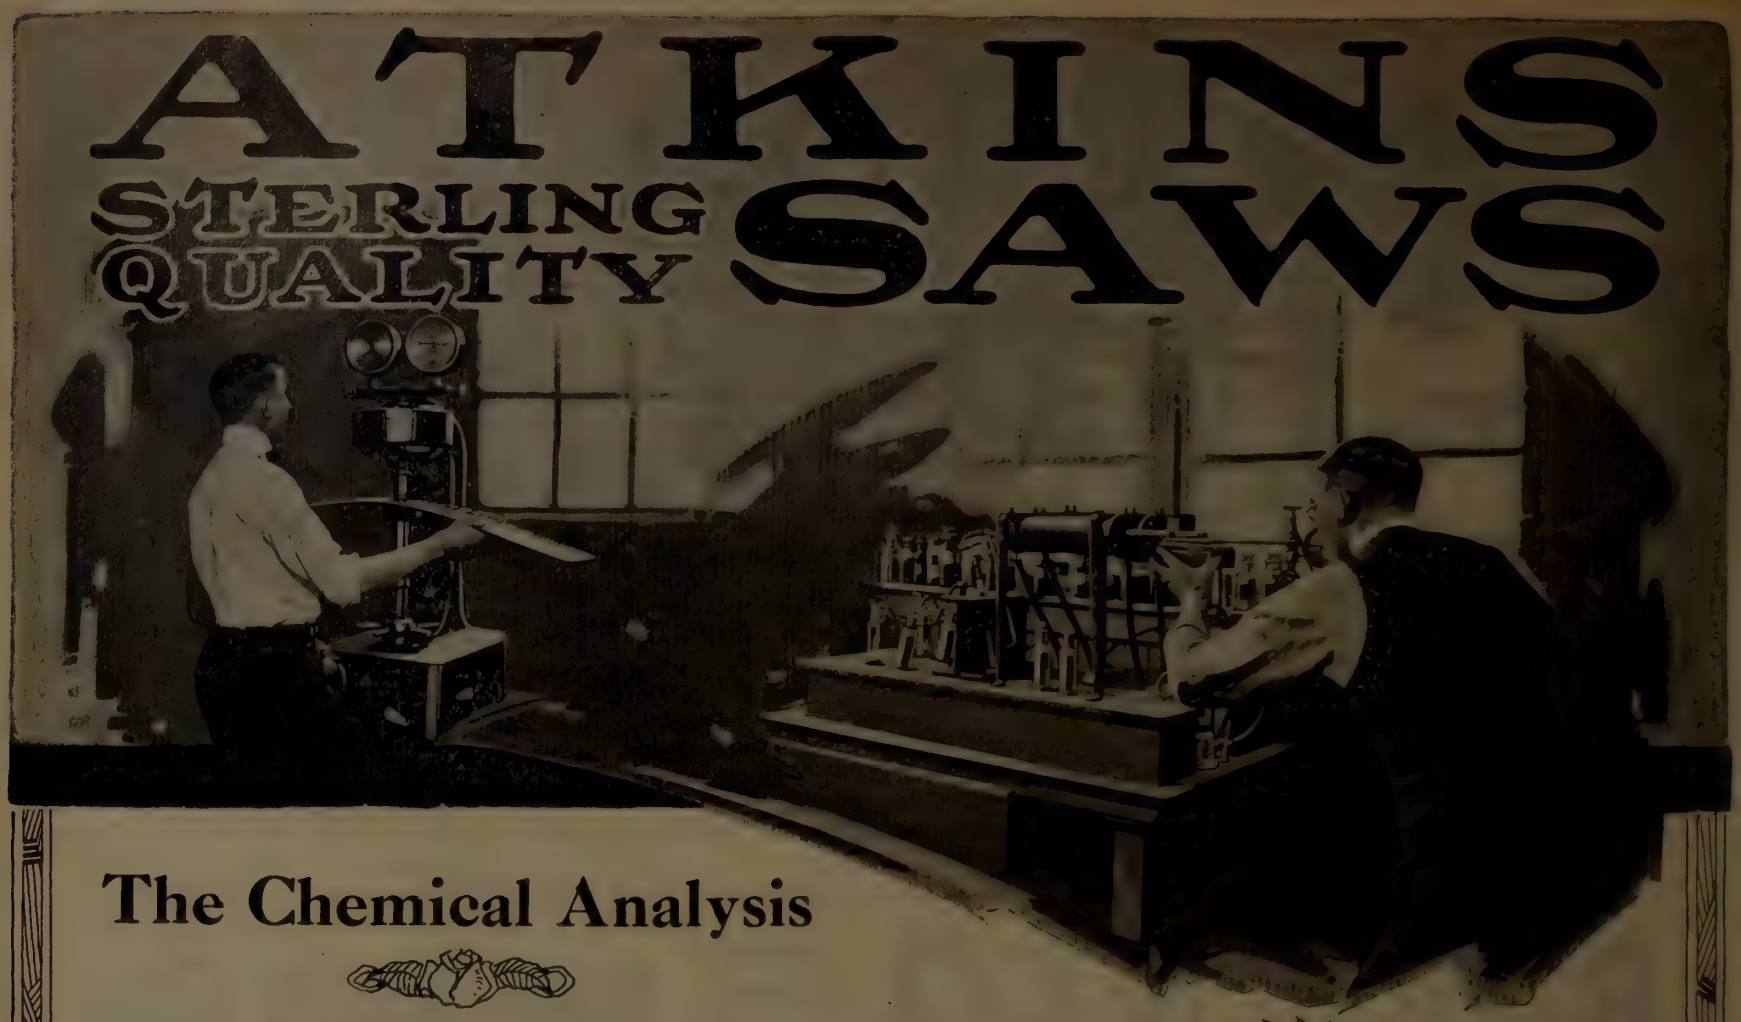
ATKINS STERLING QUALITY SAWS



The Chemical Analysis

Crucible steel making is far from an exact science. A large percentage of heats go wrong. If we made our own steel, we would be under temptation to excuse unimportant variations from perfection and work these "slightly off" batches into our products.

But we don't make our steel. We leave this to the greatest crucible steel makers in the world. And as we subject each saw plate from the steel makers to minute chemical analysis and physical inspection and test, we can be and are mercilessly exacting.

Our metallurgists see that no "slightly off" batches of steel are used in *Atkins Sterling Quality Saws*, therefore you can depend upon their uniformity and efficiency to give you maximum production.

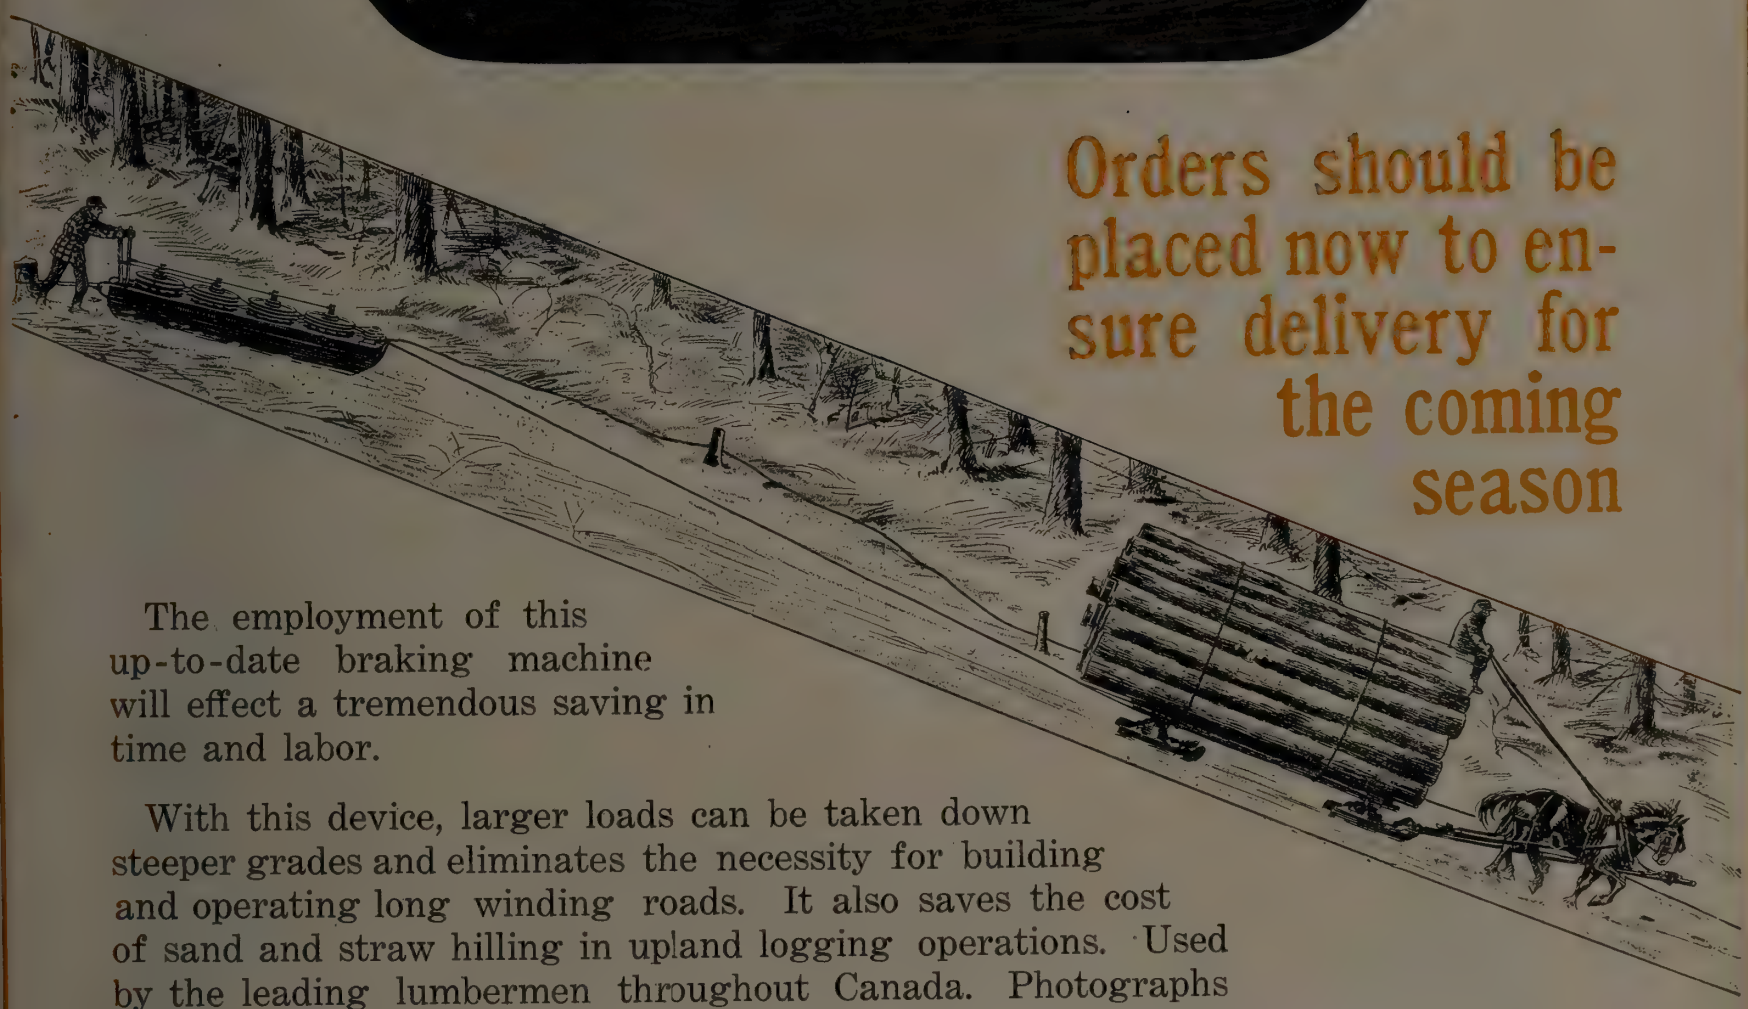
BARIENGER BRAKING DEVICE

Easy to Operate



Orders should be placed now to ensure delivery for the coming season

The employment of this up-to-date braking machine will effect a tremendous saving in time and labor.

With this device, larger loads can be taken down steeper grades and eliminates the necessity for building and operating long winding roads. It also saves the cost of sand and straw hilling in upland logging operations. Used by the leading lumbermen throughout Canada. Photographs and price-lists on request.

PATENT

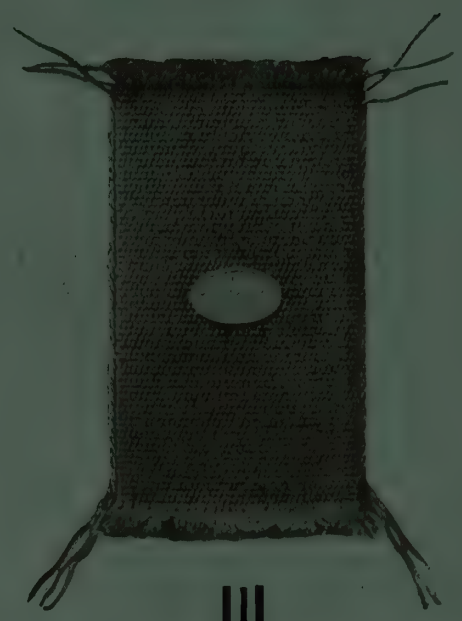
WITH - TRIPLE - TWISTED - INDESTRUCTIBLE - EDGES.

Stretchless and Waterproof

"Gripoly" Belting is especially well suited for the damp places in the pulp or saw mill, and it will stretch less than any known belt.

In power alone the saving effected is sufficient to recommend "Gripoly" to lumber operation. Its remarkable strength makes it a most desirable acquisition to the mill equipment.

"Gripoly" is composed of 85 per cent. pure camel hair and 15 per cent. long staple cotton, solidly woven to yield a tremendous strength and to resist the severest strain. The edges are composed of triple twisted strands, absolutely, indestructible, defying the friction of shifters, guide forks, or flange pulleys.



"Gripoly" is British made by Lewis & Taylor Ltd.

ANNOUNCEMENT

We have purchased the Davie Shipbuilding Company's Plant No. 4 at Levis, Quebec, for a remanufacturing plant.

Our main mill is 85 ft. x 500 ft. When installation is completed we will be able to resaw and dress 25 cars per day.

We are installing Yates Fast Feed machines and each machine will be driven by a separate motor.

Our plant is now shown in the Railway Tariffs as a stop off point for re-manufacturing in transit.

Our yard capacity will be about 15,000,000 ft. Our dry shed capacity will be about 1,000,000 ft.

We expect to start operating about the third week in September.

We will have in stock at our Levis yard by the last of September 5,000,000 ft. of dry merchantable spruce and 4,000,000 ft. of merchantable B. C. fir timbers.

We solicit your inquiries for rough or dressed spruce, rough or dressed fir or for milling in transit.

Every Minute of Every Day Service—Satisfaction

Broad Claims? Indeed! And we fully realize what responsibility we shoulder by making such claims.

That is why we constantly strive to give just a little better service and satisfaction than is ordinarily given. And that is why our customers say they like our way of doing business.

We will welcome your inquiries in regard to any of the items listed below as an opportunity to show you what our Service and Satisfaction policy mean.

Ash

Mills at: - SPRAGGE, ONT. & BLIND RIVER, ONT.

ESTABLISHED 1871

No Order too Large —No Order too Small

It has always been the policy of this firm to treat all orders equally — no order is too large, no order is too small — to receive that same careful attention to detail. This applies as fully to the rush order as any other — because we have the facilities for doing so.

Let us show you what we can do for you in the way of service, in any of the following woods—Pine, Spruce, Hemlock, Hardwoods, B. C. Lumber and Timber.

We have absolutely no connection with or interest in any other firm bearing a name similar to ours.

How to Reduce Costs of Building

Buy our "Utility" grades of Siding (made in Sitka Pine or Fir), and Flooring (Fir only). They effect a 20% saving. They satisfy the contractor because no extra labor cost is necessary and consumers appreciate the receipt of **maximum value for their dollar.** If you have not used "Utility" grades, write us —no others produce them.

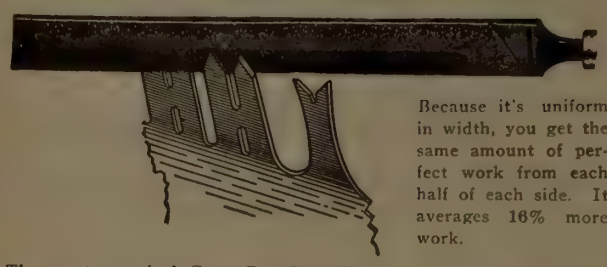
SIMONDS Crescent Ground CROSS-CUT SAWS

Simonds Special Cross Cut Saw File



Because it's uniform in width, you get the same amount of perfect work from each half of each side. It averages 16% more work.

The most practical Cross-Cut Saw File ever put on the Market.

Now's the time to make sure that you have enough Simonds Crescent Ground Cross-Cut Saws on hand for your winter's cutting. You know that these saws cut easy, saw fast and wear exceptionally well and that they cut ten per cent. more timber, same time and labor being used, than any other brand of cross-cut saws made to-day.

Feeding the Camp

IF that is your problem, remember that it is our business, too. We do a tremendous lumber camp trade and are fully acquainted with the food requirements of logging camps. We shall be glad to quote you on any lines you need this year, and will submit special quotations if you will drop us a card. We can supply you with all that's best in provisions and fresh meats, and give you a service you will appreciate

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.
Entered as second-class matter July 18th, 1914, at the Postoffice, at Buffalo, N. Y., under the Act of Congress of March 3rd, 1879.

Playing the Part in National Expansion

Canada is looming larger than ever in the eyes of the world and, in the development of the country and placing it in the forefront, industrially and commercially, the lumbermen of the Dominion have always played an important role. The lumber manufacturer has for many years been the pioneer of expansion and national upbuild. He has gone far beyond the bounds of civilization in days gone by and starting operations, has built up numerous prosperous and progressive centres. These men have had faith, vision, confidence and optimism and their names are too widely known to require specific reference.

Communities have been settled, land cleared, local markets established, railways built and business houses and factories launched as a result of the splendid work inaugurated by these forerunners of prosperity. They have been more than mere hewers of wood and drawers of water. Closely allied with and following in their wake has been the tremendous impetus given to the pulp and paper activities of the country, until today that enterprise ranks second among Canadian manufacturing industries in capitalization and first in value of exports, exclusive of farm and kindred productions.

The prestige gained by the Dominion from the heroic and self sacrificing efforts made in the great war is a household word throughout the great British Empire, and now Canada is being advertised as the land of opportunity and advancement in a way that is arresting the attention and commanding the admiration of the whole English speaking peoples.

Recent events and those to come speak louder than any paragraphs of praise. An outstanding event is the forthcoming Congress of the Chambers of Commerce of the British Empire which will be held in Toronto. Leaders in every movement will be present and many vital problems will come up for consideration and discussion.

Another significant event, advertising the Dominion in a manner never previously witnessed, is the recent tour of the delegates of the Imperial Press party, and also the unparalleled sucess of the great Canadian National Exhibition, which is the largest and most representative institution of its kind on the globe, attracting an attendance well over the million mark.

Blessed with a bountiful harvest, and unrivalled resources of mine, forest, field and stream, there is every reason to look forward to the future with assurance and cheerfulness. As one of the Imperial press delegates remarked "Canada is not half discovered—not half developed yet, and you need have no doubts regarding your future."

With the spirit of unity and cohesion, a deeper appreciation and larger conception of what we possess, there are no obstacles in the pathway of national progress and expansion which may not be overcome. Canadians require more pride and self esteem, both collectively and individually, and this thought was driven home pointedly and forcibly by the press delegates at various public functions.

Public spirit and broad ideals count for much. Patriotism and industry are not lacking, but in other matters, there should be no faltering at a time when there is a tendency to suspend and curtail both in output and operation. There may be flurries on the surface, but courage and confidence will tide over the present period of uncertainty and unrest and result in greater strides and bigger achievements than have ever recorded in the upbuild and welfare of the populace. Production, economy and thrift, are qualities which all should exercise and practice during the present juncture to the fullest extent.

In spite of predictions heard in some quarters that the bottom is dropping out of things, that chaos and revolution are in the air and various "isms" being spread which will eventually upset our whole social and industrial structure, there is, in the mind of sane, conservative men, no fear regarding the future. They have not lost their grip on things, nor their faith in mankind.

It is easy to decry and demolish but to create and construct is a vastly different proposition. The final purpose and plan must not be obscured by any temporary disarrangement or misgivings. The lumbermen of Canada are doing their bit and doing it fairly and calmly. They are acting the part of the square man. In every line of endeavor the world needs the "square man" whom the late Josh Billings described as "wun who mezzures the same each way and hain't got any winny edges nor cheap lumber in him. He is free from knots and sap and won't warp. He is klear stuff and I dunno care what you work him up into. He won't swell and he won't shrink. He is amongst men what good kiln-dried boards are amongst carpenters; he won't season-crack! It does not make any difference which side of him you come up to, he is the same bigness each way and the only way to get at him anyhow, is to face him. He knows he is square and he never spends any time trying to prove it."

Canada's Display at Empire Timber Exhibition

Varied and Impressive Showing of Leading Canadian Woods—Interest Aroused in Specific Uses of the Forest Products of the Dominion

By W. B. Stokes, Canadian Forest Products Laboratories, Montreal

Although it is hardly necessary to advertise the fact that Canada is the largest timber-producing country within the British Empire, it by no means follows that Canadian timbers are as well known throughout the Empire as they should be. One of the reasons for holding the Empire Timber Exhibition was to make timber-users familiar with the products obtainable within the borders of the King's dominions and that purpose applied as usefully to Canadian timbers as to any others.

Users of wood are very conservative in their choice of material. Different woods have such widely different properties that, once a wood is found suitable for a certain purpose, it is seeking for trouble to substitute another. In other days any change of material would be avoided, but to-day the shortage of supplies and the high cost of available timbers has effected a change in the psychology of the builder and manufacturer. As a result there appears a new spirit of inquiry and a willingness to experiment.

The problem of presenting Canadian timbers to the notice of prospective buyers from other parts of the Empire was therefore twofold. The questions were "what timbers should be shown?" and "what could be said about them?"

After consultation with the officers of the lumber associations of Canada it was decided that twenty-five kinds of lumber should be exhibited. These species were as follows:—

White Pine	Balsam Fir
Western White Pine	Cedar
Red Pine	Western Cedar
Jack Pine	Aspen
Western Yellow Pine	Beech
Tamarack	Basswood
Western Larch	Sugar Maple
Hemlock	Paper Birch
Western Hemlock	Yellow Birch
Douglas Fir	White Elm
White Spruce	Rock Elm
Englemann Spruce	White Ash
Sitka Spruce	

Not every one of these species could be considered of great importance as lumber, but all are available in reasonably large quantities and some only require to have their particular properties appreciated in order to become commercially important.

Rough and Smooth Boards Shown.

In order that visitors to the Exhibition should gain a useful and correct impression of these woods the latter were represented both by clear boards and by boards containing such defects as would place them in a lower but merchantable grade. Moreover, each quality was represented by both rough and smooth boards. No one can suggest that Canada showed at this exhibition anything but a fair and correct display of her timbers.

Canada had little to offer in competition with the beautiful tropical woods which were shown in some other parts of the exhibition in the form of interior finish, furniture and artistic objects. Canada's exhibit was necessarily less aesthetic and more severely technical. However, by using columns and cornices of Douglas fir and other Canadian woods and by placing the boards against a background of not too obtrusive green material a certain amount of distinction was given to what was, after all, only lumber.

As regards information concerning the mechanical and physical properties of these woods, Canada has the advantage over other parts of the Empire in possessing a government institution in which these are matters of experiment and study. It was possible to include in the catalogue exact figures concerning the weight, strength and hardness of each of the twenty-five kinds exhibited. In several cases these figures were arrived at from experimental work done by the staff of the Forest Products Laboratories of Canada, and it is not unlikely that the methods adopted by these laboratories will become the standard methods in similar institutions now being developed in India and Australia.

The question of the names of timbers is evidently one which demands the attention of the lumber and wood-using industries. The Empire Timber Exhibition will have been justified if it has done something to reduce the confusion which now exists in the nomenclature of timbers.

Model Houses of Canadian Woods.

Canadian white pine is commonly known as yellow pine in Great Britain and it is certainly annoying to refer to an English book on timber and to find—Douglas fir, see Oregon pine. Many other instances of differences of name were betrayed by inquiring visitors at the Canadian Exhibit. It must not be thought, however, that the English user is a greater sinner than the Canadian lumberman in this respect. The custom in the west of giving the name of "larch" to a white fir is only one example which might be quoted.

The labels on the exhibits and the entries in the catalogue of the Canadian species gave the standard name of each species and also the local and trade names, and it is hoped that some confusion may be saved thereby in the future.

Besides an exhibit of boards the Canadian stand displayed objects illustrating specific uses for Canadian woods. Two large models of houses made from Douglas fir offered one solution of the housing problem. The timbers for such houses are sent from British Columbia

The attractive and artistic exhibit of Canadian woods at the recent Empire Timber Exhibition held in London, England.

cut to size and for houses that are not made in sections they are probably the most rapidly built at present available.

Such useful words as white pine, white spruce, Sitka spruce, sugar maple and yellow birch were represented by a variety of manufactured products, such as foundry patterns, shoe lasts, parts of musical instruments and aeroplanes, mangle rollers, dowels, veneers, etc. Large baulks of timber were exhibited to show the form and size in which certain woods are available.

To illustrate the beauty of some of Canada's more ornamental woods a number of large polished panels were displayed.

A raised platform of hardwood flooring occupied the centre of the exhibit. It was composed of birch, beech and maple of the finest quality. This platform supported two small tables of original design, with tops of elm and ash respectively, which served to display small specimens and a supply of pamphlets, bulletins and other sources of information concerning Canadian timbers. The centre of the platform was occupied by a specially designed case containing an exhibit illustrating the manufacture of wood pulp by the groundwood, sulphite and Kraft processes. This case contained raw materials, illuminated photographs of plant and machinery, products and manufacturers derived therefrom. The possibility of obtaining such a product as the brightly-colored artificial silk stockings, which were shown, from the substance of a spruce log called forth a certain amount of surprise and comment.

To show that Canada's forest resources were not limited to the above-mentioned twenty-five species a set of hand-specimens of sixty-nine species was displayed. This set was found useful by many who were making a serious study of Canadian woods.

To provide a correct impression of the relative importance of different commercial woods a graphic chart was exhibited, showing the amount of each kind cut in 1918. Each specie was represented by a piece of the wood in a length proportional to the amount cut. Such a method of showing statistics is more impressive than the printing of figures. Many visitors found the chart interesting on this account as well as a valuable collection to their impressions concerning the relative amounts of Canadian timbers at present exploited.

During the exhibition numerous trade enquiries were made at the Canadian stand, and such as could not be answered from the information to hand were dealt with by the Chief Trade Commissioner for Canada in London.

The provision of the Canadian Exhibit was arranged for by the Department of Trade and Commerce and the arrangement and preparation of the exhibits was in the hands of the Forest Products Laboratories of Canada of the Forestry Branch, Department of the Interior, whose exhibit specialist, Mr. W. B. Stokes, supervised the work in Montreal and London and attended the exhibition as Canadian representative. Mr. Stokes has already acknowledged the support which he has received from the lumber associations of Canada and their members in providing materials and information for this exhibit, and expresses the belief that their efforts will be followed by an increased enquiry for Canadian timbers from all parts of the Empire.

Drying End of Lumber Industry is Important

More Attention Should be Given to This Department – How Demand for Kiln Dried Stock has Increased in Recent Years—Proper Methods of Drying.

By H. L. Henderson, New York City

The demand for better kiln drying of lumber is due to several economic factors which were not present just a few years ago. The cost of lumber has increased greatly in the last three years until it behooves the manufacturer to take more interest in the care of his raw product, the price of which has bounded upward. Just to cite an instance or two we might consider white ash of good grade which sold for around $85 in 1917 and is now bringing upward of $300 per thousand feet, an increase of 250% in three years. White oak and yellow birch have jumped 280% in the last three years and practically every other species of wood has soared in price.

It does not take a great deal of figuring then to show that a kiln load of lumber worth from $5,000 to $6,000 with a loss due to improper drying as high as 10% would make lumber decrease in value from $500 to $600 by just running it through the kiln. If only 1% or 2% of this loss could be saved in the drying it would more than pay for a good kiln operator and would soon pay the cost of a good kiln.

Another reason why the spotlight is being turned upon the dry kiln situation is the scarcity of air dried lumber. This means the greener lumber must be dried with the consequent extension of time required to evaporate the greater amount of water from the wood. In other words, kilns that were serving an industry and giving excellent results while using air dried lumber were found to have only half the capacity or in some cases less when green or partially air seasoned lumber had to be dried. This necessitated not only the addition of more kilns but required that a better kiln be used for drying green lumber.

Kiln Drying vs. Air Drying.

As the price of lumber jumps upward, we find it more profitable to kiln dry lumber directly from the sawmill. Again considering a good grade of lumber worth in the neighborhood of $200 per thousand, that has been on the sticks for a period of two years in order to dry it down to 12% moisture content, the interest on the money tied up would be close to $25. On the other hand, if this same material were put directly in a dry kiln, (assuming that it was a well-constructed kiln and operated properly) in four to six weeks' time it would be dried down to 5% or 6% moisture content at a cost of not over $20 per thousand. It is very likely that if this lumber were properly handled in the dry kiln there would be very much less loss due to warping or surface checking than would be acquired by the air seasoning method.

There are various types of dry kilns in service and it might be well to enumerate them. The first type of kiln might be called the tight heated box in which the lumber is placed and practically baked dry. In the blower type of dry kiln, heated air is forced through the piles of lumber by means of fans or blowers. In the ventilated type of kiln the circulation of air through the kiln is induced by heating coils placed underneath the lumber causing the air to rise and pass through it. The moist air escapes to the atmosphere by means of raising its temperature by heating coils while the condenser coils placed along the walls cool and condense the moisture from the air causing it to settle along the walls. This air again is heated by the coils and circulates through the lumber. I have not time to go into the methods of maintaining humidities within these various types of kilns, but in passing would say that in many cases no attempt is made to regulate the humidity or circulation, depending largely on the amount of heat that can be applied to the lumber.

Many kinds of all these various types are now in service and many of them are giving excellent satisfaction. There are also many others that are not giving good service. Some were installed for redrying lumber of a low moisture content and when attempts were made to dry green or partially air dried stock the lumber was very seriously injured. Some of the kilns seem to be drying lumber successfully but the time required is from three to five times the necessary period that it would take to dry the same amount of lumber in a properly constructed kiln.

Basic Principles of Drying.

In order to dry lumber properly basic principles of drying should be understood. When lumber comes from the log it may contain anywhere from 35% to 100% and in some cases more of water, depending on the species, etc. This is made up of two kinds, namely, the water which saturates the cell walls of the wood and is called Hydroscopic water. This makes up about 25% of the dry weight of the wood. The free water is the water which fills the cell cavities and makes up the remainder. This moisture must be driven off before the lumber can be used. There are many reasons why this lumber should be dried before using, and among them are: reduction of its weight, preventing decay, increasing its strength, and giving it a fixed dimension. Generally speaking, when lumber dries there is very little shrinkage until after all the free water is evaporated. From the 25% moisture content downward, the greatest amount of shrinkage takes place and continues right down to a very low moisture content. This factor of shrinkage then is the one that does the greatest amount of damage to lumber during the drying process.

Danger of Case Hardening.

In the process of kiln drying, the lumber is heated artificially and the moisture is evaporated at the surface of the boards. The air surrounding the lumber absorbs this moisture until it becomes saturated, after which it must be displaced by drier air in order to keep up the process. In other words, temperature and circulation are very important factors in the drying of lumber. The rate of evaporation of

the moisture from the surface of the boards, however, must not be faster than the rate at which the water comes from the centre of the board to the surface. Should this be the case, the surface will dry off quickly and the outer cell of the board will become drier than the centre. Accompanying this rapid drying of the surface we get shrinkage and when the shrinkage power becomes greater than the strength of the wood, checks appear. If this process is continued the outer shell of the lumber becomes dried and sets in an expended condition which we term case hardened. As the centre dries down to a low moisture content, these surface checks which were started in the early part of the kiln run, extend on to the centre of the board and result finally in honeycombing of the centre. To prevent the too rapid drying of the surface, the air surrounding the lumber is kept at such a state of relative humidity that it absorbs moisture from the surface of the lumber only as fast as it can come to the surface from the centre.

From the foregoing discussion it is evident that conditions of temperature humidity and circulation of the air passing through the pile must be maintained at the proper points in order to properly dry the lumber. After the moisture content of the lumber has dropped below the fibre saturation point then it is safe to gradually raise the temperature of the air and lower the relative humidities until the lumber is dried down to 5% or 8% moisture content as the case might be.

Steam is used almost entirely for obtaining the necessary temperature in the kiln, but it also plays another very important part in drying lumber. Either live or exhaust steam is mixed with the air of the kiln to maintain humidity. At the beginning of the kiln run, lumber should be thoroughly steamed. This preliminary steaming heats up the lumber to the temperature at which the drying is to start, without any evaporation taking place and furthermore tends to neutralize the stresses that were set up during the air seasoning. It does not open the pores or dissolve the saps, sugars and tannins as is commonly supposed. During the drying process it is quite often found that the lumber has become case hardened or the surface has become over dry and by steaming for about an hour at a temperature of from 10 degrees to 20 degrees higher than the drying temperature these stresses are relieved. At the end of the run should the lumber be found to be case hardened it is possible to again steam it and relieve the case hardening. The length of the steaming period and the temperatures at which it is steamed, depends largely on the thickness and the species of the lumber. If the lumber is steamed too often or too long, however, during the run or at the end, the stresses are very likely to be reversed. Quite often we get discoloration of the lumber and in some cases brashy or weak lumber results.

Essentials to Good Drying

How is it possible, now, to obtain good drying? The first essential is a well constructed and properly operated dry kiln. By this is meant a kiln in which the temperature can be regulated, and the humidity controlled, and where the circulation can be maintained at the proper rate. The kiln building should be well constructed so that there will not be leakage of heat around the doors or through the walls and should be well insulated so as to be as little disturbed by outside temperature as possible. A good workman cannot work without good tools to work with and the same is true of a dry kiln operator. He should have good instruments which will show him what conditions of temperature and humidity he is obtaining in the kiln at any particular time and he should have a complete record of the temperatures and humidities that the lumber was subjected to during the run. Another point in the proper drying of lumber is to see that the lumber is piled properly on the kiln trucks. Properly piled lumber will come out with a minimum of end checks and warping while improperly piled lumber will cause a great deal of loss in the best kiln made. It is very essential also that the operator, who is called upon to run the kiln understands the fundamental principles of drying. He should know something about the structure of the different kinds of wood. He should be able to test the lumber for case hardening, moisture content, etc., and should know how to handle his kiln in order to get the best results. He should keep records of the temperatures and humidities in each kiln and know how fast the lumber is drying under these conditions. These records should be filed for future reference. If anything goes wrong in the drying of the lumber and no records are kept it is impossible to locate the cause. If, on the other hand, the record of the drying was plotted in graphic form it would be very easy for him to glance over the curves and note the cause of the poor or slow drying.

Should Get More Attention.

The drying end of the lumber industry has not received the attention it deserves. If the metal working industries paid as little attention to their heat treating furnaces as the lumber industries do to their lumber treating kilns, it is safe to say that they would be many years behind the times. Better kilns handled more efficiently will help to solve many of the production problems. A good dry kiln is just as necessary in the preparation of lumber for manufacture as the heat treating furnaces are to the metal industries and should receive the same consideration from the management. Upon its proper functioning depends not only the quantity produced but also the quality. Just like a high grade costly machine in a factory, it requires continued attention by a skilled operator. It is also safe to say that if more brain work were used in an operation in which many thousands of dollars are involved, the loss commonly resulting in the artificial seasoning process would be many times reduced and the saving would greatly exceed the cost of this service and in addition would help to conserve our fast disappearing supply of lumber.

Waney white pine timber cut in the township of Notman by Wm. Milne & Sons of North Bay. The picture shows the timber on the dump at Tomiko Lakes. It was shipped to a Quebec firm for export to the Old Country

British Imperial Forest Policy

At the recent British Empire Forestry Conference in London, attended by delegates from all parts of the Empire, it was emphasized that "the foundation of a stable forest policy for the Empire and for its component parts must be the collection, co-ordination and dissemination of facts as to the existing state of the forests and the current and prospective demands on them. To this end it is of the first importance that a systematic survey be undertaken in each part of the Empire which will not only serve as the basis of the forest policy in that part, but also provide a means for reviewing the forestry position of the Empire as a whole."

The destruction of forests in the United Kingdom during the war for military purposes, says the U. S. Consul at London in Daily Commerce Reports, and the dependence upon overseas supplies have led to extensive reforestation plans and given stimulus to governmental action toward securing a scientific forest policy based on the economic principles of annual cutting of surplus timber as a crop and provision for automatic reproduction, as well as the afforestation of large unused areas.

It is urged that each of the governments of the Empire should lay down a definite forest policy to be administered by a properly constituted and adequate forest service, and a central Forestry Bureau in London is recommended for study, research and reference.

Housing as an International Question

Not until comparatively recent times has housing been considered a national question. It has been regarded as a private matter and each housing measure, for instance in Great Britain, has had to combat that conviction in securing the passage of any public measure and in keeping it in force after passage. The housing shortage resulting from the war, has, however, now made this a matter of first importance.

Although such a congress as the recent Inter-Allied Congress on Housing and Town Planning, held in London, can be only advisory and deliberative, the large numbers in attendance, representing 25 different countries and the formulation of definite housing programmes with plans for their possible acceptance by the various governments, gives prestige and publicity to this vital international question.

Timber Wealth of Canada Seen at Great Fair

Much Interest Aroused in Splendid Displays—Enterprising Firms Present Artistic Showing in Woodworking Line—Pulp Products Appear

The Canadian National Exhibition, Toronto, has just closed another successful year in its history and the exhibits were more representative in character, wider in variety and more attractively arranged than ever. Each new season sees some old firms dropping out, but their place is rapidly taken by new organizations, and this year, notwithstanding the highly-increased rents for booths, the number of applications was unparalleled.

The huge national institution is one of the best mediums and greatest agencies for making known the manufactured products of the world. Manufacturers in all lines admit this, and each year the big institution draws more widely than ever. This was particularly true on Manufacturers' Day. The need of new buildings is being pressed upon the management, and it is probable that next year there will be a second Transportation Building, a Pure Food Building, a Temple of Music and an Electric Building. Never were so many motor trucks displayed as this year, and the accommodation was painfully inadequate. Many exhibits were housed in tents and the Demobilization Building, which was used, is altogether out of the beaten path. Then no special efforts were made to direct attention to this or to the Automobile Accessories Building. More accommodation is urgently needed in the transportation line in connection with this modern means of locomotion, for the truck has come to play an important part in the life, upbuild and service of the lumberman, whether he be manufacturer or retailer.

Last year the Canadian Forestry Association had an important display in the Railway Building, and allied with it was an exhibit made by the Forest Products Laboratories of Montreal. The reason that no display was made this year was that Wm. B. Stokes, who had charge of the exhibit in 1919, is still in England, where he has been attending the Empire Timber Exhibition, and Robson Black of Ottawa, secretary of the Canadian Forestry Association, only recently returned after spending some weeks in the Old Land, where he was present at the Imperial Forestry gathering.

B. C. Forest Products to Toronto

One of the most attractive and imposing exhibits was that made by the Forest Branch of the Department of Lands in British Columbia under the direction of Loren L. Brown, B. C. Lumber Commissioner for the East. The space occupied in the Government Building was 12 x 65 feet and the walls were of natural finish, western pine, western spruce, western red cedar, Douglas fir, cottonwood, western hemlock and western larch. The panelling in these various woods was particularly effective and striking, and there were also shown pilasters, cornices, plate rails and newels. Another interesting feature of the exhibit was that of the various woods in cherry, walnut, light and dark mahogany, fumed oak, antique oak, golden oak and other finishes. The exhibit was largely the same as presented last year with some new additions in the way of a hand-carved chair in Douglas fir and a beautiful library table, both finished in driftwood effect. This effect is obtained by applying torches to the pieces when completed and then brushing out the softwood with a wire brush. The chair and table were the centre of much interest and those in charge had to answer many questions.

At the rear of the booth were two fine specimens of deals of clear Douglas fir and Sitka spruce, the former being 3 x 15 x 32 and the latter 3½ x 12 x 30. The clear, even texture, nice grain and fine, smooth surface of these deals attracted favorable notice. Other features of the exhibit were tight and slack cooperage in fir and spruce, wound wire pipes made of Douglas fir; tin-tipped spruce berry baskets; raspberry baskets of spruce, enclosed in a spruce crate; fir heading; cottonwood egg cases; collapsible berry boxes, as well as many other allied lines, not forgetting doors of many unique patterns, as well as a large red cedar chest; a Douglas fir settee, finished in oak, and centre table of an ornate pattern, finished in mahogany, walnut and oak. Fir doors were finished in old English, golden oak, cherry and natural. There was a double panel of B. C. dimension shingles of diamond, octagonal, and other shapes, as well as Perfection shingles, along with pails, tubs, boxes, etc. Another new feature was a display of hemlock and cedar bevel siding.

Pulp Possibilities of Province.

This year more attention was paid to the pulp and paper products of B. C., as that province is rapidly coming to the front in this line. In framed cases there were shown the manufacture of wood-pulp by the sulphite process and also this production by the groundwood method. Each stage of manufacture from the spruce log to lapped sheets of pulp was clearly presented, as well as rolls of newsprint and kraft paper from B. C. mills. Large photographs of representative industries in this line adorned the walls. Huge printed signs proclaimed the fact that British Columbia in 1918 had an output in pulp and paper products of $4,062,724 and last year $12,554,257. These statistics are striking in this, not only when compared with the output in other provinces, but they reveal that production in the pulp and paper line has within one year trebled itself so far as British Columbia is concerned.

A splendid exhibit of an allied character is that of the Abitibi Power & Paper Co. of Iroquois Falls, who have a large space in the Dominion Government Building and display not only samples of newsprint but various photographs, showing every operation in the manufacture of chemical and mechanical pulp, newsprint, etc. Some idea of the picturesque and inviting character of the town of Iroquois Falls may be gained by a glance at the views, showing the streets, parks, boulevards, houses of the workmen and public buildings. T. H. Wilkes, superintendent of the Fire Protection Department of the company, is in charge of the exhibit. Several logging scenes are also presented, showing the method by which pulpwood is cut and driven to the mills. There are also shown specimens of the block spruce, Norway spruce and white spruce. The company have about 50 acres cleared and devoted to a nursery, and everything is being done in the way of devoting attention to the reforestration problems. Some interesting figures, which were shown, tell better than anything else the rapid development of the Abitibi Company. In the Woods & Forest Branch the wages paid out annually are $1,536,198; men employed, 1,200; number of cords of wood cut, 163,000; number of camp operations, 27. In the mill the annual output of newsprint is 75,000 tons, groundwood pulp, 35,000 tons; sulphite, 25,000 tons, and number of men employed 2,500, with an annual wage bill of $3,085,518. The company is increasing production as follows: For 1921 newsprint from 250 tons daily to 500 tons, groundwood pulp from 320 tons to 550 tons, sulphite pulp 137 tons to 175 tons.

Interesting Wood-working Displays.

The R. Laidlaw Lumber Co. of Toronto, have a very attractive exhibit of various lines in the Process Building. Doors, flooring, newels, verandah and interior columns are shown, and the walls of the booth were adorned with beaver board. Newel posts, and pedestals, both fluted and plain, were exhibited. The front entrance of a pretentious dwelling-house was displayed, showing some very attractive pillars, and among other things, which interested the ladies, were several Tennessee aromatic red cedar chests. The newest designs in doors were exhibited in mahogany, quartered cut oak, plain oak, chestnut and birch, while oak, maple and birch flooring were also features of the display. A miniature dwelling-house and a miniature silo attracted considerable attention. The former was completely furnished and fitted up with electric light and other conveniences.

Kent Ockley, Limited, Toronto, who are specialists in planing mill products, including doors and hardwood flooring, were showing a nice line of interior and exterior doors in fir, chestnut and oak, both slab and panel designs. An interesting feature was a chestnut and fir door stained to match. The resemblance was so close that many of the visitors were unable to distinguish one from another. This goes to show that these two woods may be used together in the same room or building. A few samples of hardwood flooring in different woods were also on display.

Batts Limited, Toronto, who have a space of some 60 feet frontage in the Process Building, are once more to the front with a varied and impressive exhibit. On one side is a pergola with Grecian columns, while oak, Georgia pine and chestnut columns and pedestals were shown for interior decoration. The exterior columns were of white pine, in both fluted and plain effects, and a number of artistic-appearing doors were displayed in Georgia pine, chestnut, B. C. fir and oak. Newel posts, particularly those in chestnut and quartered cut oak, attracted much attention, while other lines were stairwork, balustrades of various types, fluted and plain columns, newel posts of different designs and two sections of attractive oak colonades.

How White Pine Blister is Being Combatted

Protective Measures Adopted for Exterminating Pest—Need of Arousing Public in United Action Against Disease Which is Creating Havoc

It is interesting to note what has been done in connection with the white pine blister rust campaign as conducted by the division of botany of the forestry department, Ottawa. An instructive memorandum has been sent out by the Canadian Lumbermen's Association, Ottawa, in regard to what has been carried out and is in part as follows:

1. A limited amount of scouting for the presence of the blister rust fungus on currants and gooseberries was done in Timiskaming and Kenora districts, Province of Ontario, and in the Province of Alberta. The fact that the fungus was not found in these localities is not to be taken as evidence that it does not exist there. The territory covered was too limited to substantiate any definite conclusions.

2. Surveys in Simcoe, Haliburton, Hastings and Renfrew Counties and Muskoka district, Province of Ontario, showed that the fungus was commonly present in Renfrew county, sparingly present in Hastings, Simcoe and Muskoka, but was not found in northern Haliburton county, although currants and gooseberries were examined in 21 localities in that country.

3. Five central areas, planned to be kept under observation for at least 15 years have been established. These areas should furnish data in time upon the effectiveness of the removal of currants and gooseberries from within and around a pine woodlot for a distance of 500 yards.

4. The surveys of 35 pine woodland areas in the Niagara Peninsula, around Oakville and in Somcoe county conducted in 1918 and checked in 1919, showed that:

(a) While an average of about 2% of the trees examined were infected, in a few cases as high as 20% and 30% of the trees in some woodlots are infected.

(b) No increase in the number of diseased trees was found in 1919 over the number found in 1918.

5. The Destructive Insect and Pest Act was amended (1) to permit the importation of currants and gooseberries into the Province of Ontario from the State of New York, and (2) to prohibit the shipment of five-leaved pines, and currant and gooseberries (not including their fruit) from east of the western border of Saskatchewan into Alberta and British Columbia.

6. At a meeting of persons interested in the white pine blister rust, held in Portland, Oregon, April 23-24, 1919, under the auspices of the Advisory Board of the American Phytopathological Society, the Division of Botany was represented by Mr. W. A. McCubbin. A copy of the report submitted by Mr. McCubbin on this meeting is quoted at the meeting is appended.

Field Work On White Pine Blister Rust.

Surveys.

1. An inspector was sent to the Province of Alberta to determine if the blister rust fungus was present in that province. He arrived there on August 20th, which was unfortunately too late to make an adequate survey and furthermore he saw fit to resign on September 1st, thus nullifying any results worth while. He examined a total of 1,600 currants in five districts but found no rust.

2. An inspector was sent to make a survey of Timiskaming and Kenora districts. Only 17 properties were examined in six townships and thus the fact that the fungus was not found is not evidence that it has not spread into these districts.

3. Inspectors were sent into Simcoe, Haliburton, Hastings and Renfrew counties and Muskoka district in the Province of Ontario. The following is a summarization of their work:

Control Areas Established.

County of District	No. of Tps. where exam. were made	No. of properties inspected	No. of properties showing fungus
Simcoe	8	41	3
Muskoka	3	11	3
Haliburton	9	21	0
Hastings	10	32	3
Renfrew	17	91	25

The four control areas established in 1918 at (1) Lincoln county, Ontario, (2) Bowmanville, Ontario, (3) Carillon, P.Q., and (4) Berthierville, P.Q., were re-inspected this season.

1. On control areas No. 1, a count made, showed 1,378 white pines in the area; none were diseased. Three currant bushes were found within 500 zone and eradicated. The area was well mapped for future reference.

2. On control area No. 2, there are 1,125 white pines, 50 of which are already diseased. Thirteen wild gooseberry bushes and four black currant bushes were found and eradicated within 500 yard zone. This area is yet to be mapped.

3. On control area No. 3 there are 1,556 pines, none of which are diseased. Nine Ribes plants were eradicated in the 500 yard zone. Area mapped.

5. A new control area (No. 5) was laid at Lachute, P.Q. The area contains 900 white pines, and 79 wild and 30 cultivated Ribes plants were removed in making the 500 yard zone. This area is yet to be mapped.

Pine Woodlot Surveys to Determine Destructiveness.

The 35 white pine woodlots in the Niagara Peninsula around Oakville and in Somcoe county that were examined in 1918 for prevalence of the disease were re-inspected this year. Last year's record showed that an average of 2 per cent. of the pines examined in these areas were infected, with a maximum of 20 per cent. to 30 per cent. of the trees infected in three or four of the 35 areas. The records this season show no increase over last year's. It should be remembered, however, that any new infection accomplished in 1916 or previously; thus records for any one season are not conclusive, and useful data on the real importance of this disease in pine woodlands can only be obtained after five or ten years' accumulation of data on such areas.

New Legislation.

The Destructive Insect and Pest Act was amended as follows:

1. The former regulation, sub-section "f" of section 7 prohibiting the importation of currants and gooseberries into Canada from any point east of the western boundaries of Minnesota, Iowa, Missouri, Arkansas and Louisiana was amended by adding: "Provided further, that the importation of said vegetation shall be permitted without any restriction into the Province of Ontario from the State of New York."

2. Section 12 was amended by adding thereto the following subsection (b).

(B) "The movement of all five-leaved species of the Genus Pinus and their horticultural varieties, as well as all species and varieties of currants and gooseberries (Ribes and Grossularia) but not including the fruits of these latter, is prohibited from the area of the Dominion of Canada to the east of the border line between Saskachewan and Alberta, to the west of this line."

Meetings to Consider Blister Rust Question.

A meeting of persons interested in the attempt being made to keep the blister rust out of the western parts of Canada and the United States was held April 23-24, 1919, in Portland, Oregon. This meeting was held under the auspices of the Advisory Board of the American Phytopathological Society, and the Division of Botany was represented by Mr. W. A. McCubbin. Mr. D. Roy Cameron, Dominion Forest Service, Kamloops, B.C., and Mr. J. W. Bastham, Provincial Plant Pathologist, Vancouver, B.C., were also in attendance from Canada. Fifty persons representing the United States Department of Agriculture and the various western states were present. A copy of the recommendations adopted at this meeting is appended. The following report of these meetings prepared by Mr. McCubbin explains the trend of opinion on blister rust as expressed at this conference:

"At the beginning of the conference Dr. Haven Metcalf outlined the general situation, including the introduction of the disease, the early attempts to deal with it, and the present situation in the east. He also gave the more recent results attained by Dr. Spaulding, showing conclusively that the blister rust will winter on currant leaves. His report stated that Dr. Spaulding has obtained this spring very complete confirmation of the work announced last year, wherein he was able to secure infection of greenhouse Ribes from spores overwintering on old Ribes, leaves outside. In this same connection Dr. Ellsworth Bethel explained the nature of the pinion pine rust which has a stage almost indistinguishable from Cronartium ribicola on Ribes. He states, however, that the two are quite distinct and can be recognized microscopically.

In continuation, Dr. Metcalfe outlined the measures that have been taken in the east, especially those concerned with the quarantine

regulations. The similar precautions that were being taken in Canada against the spread of the disease were obtained by your representative.

Reports were then received by the men who had been surveying for the disease in the western region; Dr. Long from Colorado, Dr. Meinecke from California, Dr. Weir from Idaho, Mr. Dean from Seattle, J. W. Eastham from British Columbia, and your representative for the Prairie Provinces. The summary of all their reports indicates that after a considerable amount of survey work they have carried on not a single case of the disease has been found in the west. The record is a very hopeful sign.

The most important question for the west was recognized to be that of quarantine against the introduction of the disease, and this matter was discussed at great length. Dr. Metcalfe explained the quarantine regulations of the United States Federal Department and our Canadian quarantines were also dealt with. The state quarantines were then taken up and after much discussion the conference unanimously agreed on the several points which are covered (see appendix). The general feeling of the meeting was that there were not sufficient state and provincial quarantine regulations, and that in many cases the machinery for making these quarantine regulations effective was so deficient that the laws themselves were practically ineffective. It was also clearly emphasized that these state and provincial quarantines are needed not only for the blister rust disease, but in order to enable us to quickly meet any emergency that might in future arise in connection wtih other diseases. Hence one of the most important recommendations of the conference was for an effective state or provincial quarantine with the necessary machinery for carrying it out, and with emergency funds that might be devoted to sudden outbreaks of disease.

Getting the Public Interested.

A considerable amount of discussion was entered about the question of publications, such as bulletins, circulars, news articles, etc., and other means of getting the public interested in the disease so that the public opinion would be at the back of the movement. In this connection also it was suggested, as pointed out in resolution No. 3, that the U. S. Circular Board circularize their express and shipping agents asking them to receive no shipments of either white pines or currants from the east across the federal quarantine line. The experience of the quarantine authorities in California leads us to think that this will be a very practical means of preventing shipments which might otherwise escape the notice of the quarantine officers.

The above report taken in connection with the accompanying report of the meeting will indicate practically all the questions dealt with. I would say in conclusion that while there was considerable hesitation on the part of the U. S. delegates to make any resolutions or statements which could be construed as interference in the conduct of the matter on this side of the line, yet there is a strong feeling that unless we can make our common fight against this disease uniform and effective on both sides of the line, the situation is likely to be most dangerous.

Suggested Lines of Action.

I would therefore bring to your attention the desirability of action along the following lines:—

(1) The necessity of making a quarantine on the eastern border of Alberta against all pines and Ribes thoroughly effective. The experience of quarantine officers here as well as elsewhere indicates that many of our quarantine measures are merely sieves which hold back the larger shipments, but allow countless smaller shipments to trickle through in various ways.

(2) I would consider it advisable that those provinces which have not yet provided themselves with quarantine acts be encouraged and advised to do so at the earliest opportunity, so that they may be able to protect themselves not alone against foreign importations but against the introduction of diseases from sister provinces, and, as already pointed out, it is very necessary that enabling acts passed for this purpose should be accompanied by an adequate organization and an emergency fund, which need not be spent unless occasion arises.

(3) I would further urge the adoption of a policy of publicity. I would favor the publication of bulletins, circulars, and press articles which would reach at least the greatest proportion of the public-spirited and intelligent members of the various provinces, and thus create a body of public opinion which would be in sympathy with any action that the department might be compelled to take.

(4) In further reference to resolution No. 8, which endorses the measures of protection already taken by the Dominion, I would suggest that the western situation be given every attention possible, even at the expense of work in the east if necessary, since at the present time the centre of interest in this disease from the federal point of view lies in the Province of British Columbia and the adjoining Prairie Provinces. The work to be done involves besides a strict establishment of the quarantine already mentioned, as careful a survey of the western pine district as possible to see whether the disease has yet become established there. If it is, all future work may be dropped, and if it is not, then we may continue to hope that it can be kept from spreading from our eastern districts.

Respectfully submitted,

(Sgd.) W. H. Rankin.

Grading Lumber in Various Parts of Country

Uses to Which Product is Put Determine Number, Size and Position of Defects That It May Contain and Still be Satisfactory—Rules of Association

Under the title, "How Lumber is Graded," H. S. Betts, engineer in forest products of the U. S. Forest Service, writes a very interesting and instructive booklet describing the various methods of grading lumber in use in different parts of the country, and gives a resume of the rules adopted by various associations. In introducing the subject, Mr. Betts begins at the beginning and explains very clearly the basis of lumber grading. He says:

The boards cut in a sawmill from logs of various kinds vary widely in quality. Some boards are very knotty, others have a few knots, and still others are clear. Some contain checks or splits and others have bark on the edges or are somewhat decayed in places. The clear boards are more valuable for most purposes than those with knots, so it becomes necessary to separate the lumber as it comes from the mill into classes or grades. The lumber in these grades varies in quality from practically clear boards in the highest grade to lumber in the lowest grade containing so many knots, checks, and other defects that it is unfit for anything except perhaps temporary construction or for cutting up so as to obtain small, clear pieces, the defective parts being discarded.

"The use to which lumber is to be put determines the number, size and position of the defects it may contain and still be satisfactory. In siding, for example, a reasonable number of knots on the edges which are covered when the siding is in place may evidently be allowed. In flooring some knots and other defects on the under side are allowable, since they will not show when the flooring is in use. Sheathing and subflooring may have a considerable number of defects, since both kinds of lumber are entirely covered by finishing material. Covered lumber such as sheathing, should, of course, be free from decay, even if it does not show, as the decay is quite likely to spread rapidly. Door panels are an example of very high-grade lumber that should be clear on both sides.

Rules Deal With Defects

"The location of defects in a piece of lumber determines the length and width of clean pieces that can be cut from it and the waste that will occur when the cuttings are made. Furniture requires comparatively short, wide pieces of clear lumber, while rails for porches and stairs require long narrow clear lengths. Lumber from which a large proportion of furniture stock could be cut might yield very little rail stock. The condition of defects may also influence the grade of a piece of lumber. Tight knots in certain grades of siding or ceiling may be allowed, while loose knots likely to drop out would be objectionable.

"The grading rules in general use at present with very few exceptions have to do only with defects and do not take into account the quality of the wood itself. That is, if two boards of the same species are clear or if they have similar defects, both boards are placed in the same grade regardless of the quality of the wood itself. As a matter of fact, the wood in one board may be dense, heavy, and strong, and the wood in the other light and weak. For some purposes, such as siding, ceiling, or finish, it may not matter whether dense or light wood is used; but for other purposes such as vehicle parts, structural timber, or flooring, where strength or hardness is

a prime requisite, the wood must be dense to give satisfactory service.

"The rules at present used for grading lumber were prepared largely by lumber associations. The members of these associations are made up of manufacturers and dealers who handle lumber of one or more species that grow in a certain region or are naturally grouped together. For example, the grading rules of the Northern Pine Manufacturers' Association cover four woods—white pine, Norway pine, spruce, and tamarack—all of which grow in the Lake States region. On the other hand, the National Hardwood Lumber Association, as its name implies, includes all hardwoods. Its members are made up of wholesalers and manufacturers located largely in or near the hardwood forest regions of the Eastern States.

Softwood Lumber Grading

"Softwood lumber, unlike hardwood lumber, is graded under a considerable number of different rules. Not only are the different kinds of softwoods graded under different rules, but the same kinds are, in a number of cases, graded under different rules in different parts of the country and even in the same regions. Such a condition causes frequent misunderstandings between buyer and seller and is confusing to one not familiar with the grading situation.

"The various mills originally made their own rules to suit their special conditions. While such a condition might be satisfactory where a mill supplied practically all the lumber used in its vicinity, as soon as mills with different rules for the same timber began to sell in the same territory, confusion and dissatisfaction were bound to result. As means of transportation grew easier and cheaper and lumber was shipped greater distances from its sources, organizations of manufacturers and dealers in different regions drew up rules to enable them to handle lumber of standard sizes and with less misunderstanding as to quality. By the use of such rules manufacturers could tell more satisfactorily the quality of lumber wanted by dealers and the dealers in turn could be surer that their orders would be correctly filled. These rules first classified the various kinds of lumber products, as siding, boards, ceiling, flooring, finishing, dimensions, etc., and then specified the size and number of defects, such as knots and checks, allowed in the various grades of each product. At first the rules were camparatively simple, but they have been expanded, and new ones added to cover special products, and the rules for any one product further subdivided until pamphlets of 50 or more printed pages may be required to describe the different grades, sizes and shapes of the various standard lumber products of one kind of wood.

"The most common defects specified in softwood-grading rules are knots, stained sap, shake, wane, rot, pitch, splits, and seasoning checks. Insepection is usually specified on the better or dressed side. However, factory lumber used for the manufacture of doors, sash, etc., which must show on both sides, is graded from the poorer side. There is a tendency to avoid definite detailed specifications for the different grades, especially in certain of the white pine grading rules, where only a general description of each grade and numerous examples of pieces that should be admitted are given. Consequently the grade of each piece may be left largely to the judgment of the inspector.

"Standard lengths, widths, and thicknesses of softwoods differ somewhat in the various rules and also in different classes of material and grades in the same rules. In some sets of rules standard sizes are not listed completely.

Standard Lengths, Widths and Thicknesses

"The various lumber products to which grades are given by the different lumber associations generally include finish, flooring, siding, ceiling, boards, timbers, fencing, etc.; and the numbers 1, 2, 3 and 4 usually with the term "Common" are used for grades of common lumber, boards, dimensions, etc. Other rules designate their highest grades of finish as 1, 2, and 3 clear, either with or without lower grades of finish material designated A, B. C. and D.

"Douglas fir is commonly graded under three sets of rules, one for rail shipments, one for domestic-cargo shipments, and one for export. The rules are issued by the West Coast Lumbermen's Association and the Pacific Lumber Inspection Bureau.

"These are separate organizations which co-operate closely. The Pacific Lumber Inspetcion Bureau is in effect the inspection department of the West Coast Lumbermen's Association. The West Coast Lumbermen's Association "Rail A" rules cover Douglas fir and Western hemlock, which are graded together, and also Sitka spruce and Western red cedar, both of which are graded separately. In the "Rail A" rules for Douglas fir and Western hemlock there is first a division made into a large number of classes of lumber, as flooring, ceiling, finish, common, dimension, timbers, etc.; and a number of grades are given under each class. The principal grades are Nos. 1, 2, 3, and 4 Clear Selected Common, and Nos. 1, 2, and 3 Common. The grade No. 1 Clear, however, is given only in vertical grain flooring and is practically free from all defects. Nos. 2 Clear admits a few small defects varying with the class of material. The "Clear" grades are finish material, while the "Common" grades are intended for other purposes, while the "Common" grades are intended for other purposes, such as common boards and timbers. Defects allowable in "Common" grades are naturally more serious than those in the "Clear" grades. Grades of the same name under different classes of material are somewhat similar as to defects allowed; there are sometimes wide differences, however, both as to sizes and kinds of defects allowed, due to the requirements of a particular class of material.

"Douglas fir timber varies widely in the quality of the wood itself, aside from defects. The West Coast Lumbermen's Association has very recently adopted the Forest Service density rule for securing high-grade structural material.

"The West Coast Lumbermen's Association also insures separate standard specifications for Douglas fir car material. The products and grades listed in these rules are as follows:

Siding, lining, roofing.....No. 2 Clear and Better, Edge Grained
Siding, lining, roofing.....No. 2 Clear and Better, Flat Grained
Decking, sills, framing.....Select Common
Decking, sills, framing.....No. 1 Common

Pacific Lumber Inspection Bureau Rules

"Two sets of rules, Export and Domestic, are issued by the Pacific Lumber Inspection Bureau for the use of cargo shippers:

"Export Rules.—Several classes of lumber are given, as Clears, Ship Plank, Deck Plant, Flooring, Ceiling, Siding, etc. Some of these classes have several grades and some but one. Boards are graded as No. 2 Clear and Better (Edge and Flat Grain), Merchantable, and Common. Flooring grades are Nos. 1, 2 and 3 Clear Edge Grain and No. 2 Clear and Better and No. 3 Clear Flat Grain. Stave grades are No. 1 and No. 2. Other products are manufactured in one grade only.

"Domestic Rules.—A classification is made into rough clears, common, factory lumber, flooring, ceiling, siding, etc.; and under each class several grades are given, as Nos. 1, 2, 3, and 4 Clear, No. 2 Clear and Better. Selected Common and Nos. 1, 2, and 3 Common. These grades usually differ considerably under each of the different classes. No. 2 Clear and Better in general allows a small number of small tight knots and pitch pockets; No. 3 Clear allows a large number of larger knots and pitch pockets. In the "Common" grades larger knots, pitch pockets, colored sap, and other defects allowable in construction material are omitted. Specifications are given for quite a number of products, such as tanks, cross arms, silo and pipe stock, ship planks and decking, mining timber, and railroad ties.

"Two sets of rules of the Pacific Lumber Inspection Bureau differ both as to classes of material and grades. There are a few grades, however, such as ship plank and flooring, which are practically the same in both sets of rules.

Western Hemlock

"In the Pacific Northwest, Western hemlock is graded under the Rail A rules of the West Coast Lumbermen's Association and the Domestic and Export rules of the Pacific Lumber Inspection Bureau. In each rule the grades are practically the same as the Douglas fir grades, although hemlock products are limited to flooring, ceiling, partition, different kinds of siding, finish, boards, shiplap, and dimension. In a number of the lower grades a certain percentage of hemlock is allowed mixed with an order for Douglas fir. In fact, in the grade of No. 3 Common for Douglas fir boards, dimension, plank, and small timbers any proportion or all hemlock is allowed. Douglas fir mining timber may be 15 per cent. hemlock. In No. 3 Clear flat flooring and in No. 3 and 4 Clear ceiling, partition, and siding hemlock in any quantity is permitted.

Englemann and Sitka Spruce

"Sitka spruce is graded under the Rail A rules of the West Coast Lumber Manufacturers' Association and both the Domestic and the Export rules of the Pacific Lumber Inspection Bureau. The Rail A and Domestic rules have identical grades for spruce—finish, factory, lumber, and box lumber. The Rail A rules give some 22 products in all, with one to four grades for each. The Domestic rules contain only the products previously mentioned. The Export rules of the Inspection Bureau have four products: Rough clear, rough shelving, round merchantable, and merchantable box, with one or two grades each. Englemann spruce is graded under the rules of the Western Pine Manufacturers' Association.

"Western red cedar is graded underthe rules of the West Coast Lumber Manufacturers' Association and the Pacific Lumber Inspection Bureau Domestic Rules. The rules covering Western red cedar in these two sets of rules are nearly the same. The Bevel Siding grades in both rules are Clear, A, and B, while finish and boards are graded as No. 2 Clear and Better, and Nos. 1 and 2 Common, respectively. Bungalow or colonial siding and porch decking have but one grade in both rules. In the Inland Empire, a few grades of the Western Pine Manufacturers' Association are used for Western red cedar to a very small extent."

A panoramic view of a camp crew of the Indian Lake Lumber Co. at Osaquan, Ontario

Progressive Northern Mill Has Many Features

Plant of Indian Lake Lumber Co. is Fast-Cutting One and Possess Thoroughly Modern Equipment—How Various Departments are Operated

In the more or less unknown regions of New Ontario several lumber companies have been operating quietly but effectively for a number of years. The sawmill owned by the Indian Lake Lumber Company situated at Osaquan, Ontario, is a fast-cutting plant manufacturing not only lumber but a considerable quantity of railway ties every year. The operations are directed by Mr. D. L. Mather of Winnipeg, who has been a progressive lumberman in this district for over a decade. The mill was designed for and built by Mr. T. F. Wilson of Kenora, who is also the superintendent, and has constructed six different mills for the same people at various locations.

This plant cuts during a ten-hour day about 3,000 railway ties, 20,000 ft. b. m. lumber and 20 cords slabs for snow fences. The season's cut is usually about 250,000 logs, pine, spruce, and tamarack, from which approximately 900,000 railway ties are made. The mill is linked up with the main line C. P. R by means of a two-mile, standard guage, spur track, so that the company's products are quickly transported to the various distributing centres.

Perfect Alignment of Machinery.

The building is of timber construction throughout except that the boiler house has corrugated roofing and sheathing, also a brick wall separating it from the engine room. One of the outstanding features in the construction is the great care with which the foundations and footings were designed and put in place, thus ensuring perfect alignment of the machinery at all times. This alone eliminates many hot bearings and other ailments peculiar to saw mills of flimsy construction.

The power plant is equipped with a Waterous 200 horse power rocker valve engine, a John Doty horse power Corliss and Robb-Armstrong 15 K. W. lighting set. Steam is supplied to these engines and the log handling appliances from two Waterous horizontal fir tube boilers of 175 B.H.P each, at 100 lbs. pressure. These boilers have dutch oven settings and are fired with sawdust conveyed directly from the saws. In the boiler house is installed a 15 horse power vertical engine operating a return conveyor from the fuel house to the furnaces. In the fuel house is stored all the surplus sawdust from the mill and shavings from the planing mill. The feed water from with the exhaust pipe from the 200 horse power engine. Two duplex 6" by 4" by 6" feed pumps, interchangeably connected are used, one to supply water to the boilers, the other for fire purposes and water works throughout the mill.

Modern Equipment of the Plant.

The machinery on the sawing floor comprises a Waterous heavy circular saw equipment, steel carriage with 10-inch gunshot feed, oscillating steam nigger, steam loader, kicker and bunt block. The cylinders of these latter appliances are, of course, placed on the ground floor. The lumber passes through a Waterous double edger with bull edger attachment feeding to a trimmer of the same manufacture. One special feature of the equipment is a larger horizontal band resaw, 10 in saw on 7 ft. wheels, built by the Diamond Iron Works. The machine is so placed that all large slabs from the circulars are passed through it, forming one-inch lumber. The slabs are returned until every available board is extracted. Smaller slabs and those rejected from the resaw are led into a pocket for loading as snow the pumps is heated up to about 200 degrees F. by passing it, first through an exhaust tunnel, then into a heater connected in series fence material.

The tie slasher is of the overhead type consisting of three saws spaced eight feet apart on a single drive. These saws also cut the snow fence slabs into eight foot lengths. From the slasher the ties of different grades are conveyed into their respective cars at the loading platform by means of a special arrangement of transfer chains and live rolls. Tie and slab ends fall into a refuse conveyor from which they are further removed and piled out for use as house fuel. The remaining useless material, such as thin slabs and edgings, are cut up by a four saw slab slasher from which they are conveyed to a cylindrical steelplate burner, twenty feet in diameter and seventy-five feet high.

The filing room is equipped with a separate steam engine for power, a Cavel automatic band saw grinder, two Waterous automatic grinders for circular saws, hammering and rolling table, brazing table, lap grinder and power forge, as well as the usual complement of swaging and hammering tools.

The boom is equipped with a 15 horse power steam winch for warping in logs and a Waterous marine saw for cutting up long timber into sixteen-foot lengths and crooked logs into eight-foot pieces. The use of this machinery is an innovation with the company in the present mill and has proved to be a decided success.

The lumber cut during the summer, amounting to about 1,250,000

View of the sawmill of the Indian Lake Lumber Co., Osaquan, Ont.

feet B M. is run through the planer in the late fall and shipped chiefly to the western trade. The planing mill is driven by a forty horse power Nagle engine supplied with steam from the main boilers. The machinery includes a Berlin 108 planer and a steam hoist for unloading lumber from the wagons and placing it on rolls leading to the machines.

How All Logs Are Handled.

Logging operations are carried on by the same company in the areas surrounding several lakes and rivers near Osaquan. The work is facilitated by the use of three West and Peachey alligator and an Adams gasoline pointer. In several places logs are driven

Typical camp of the Indian Lake Lumber Co. at Osaquan, Ont.

short distances necessitating the construction of three timber crib dams and two log flumes. The logging is supervised by Mr. Geo. Leach, ably assisted by Mr. R. G. White, who is also the night foreman of the sawmill during the summer months

In connection with the mill, mention might be made of the office building, sleeping camp and boarding house also designed and built by Mr. Wilson. These are two-storied frame structures, with plenty of windows and finished inside with V-joint material. The sleeping quarters are fitted out with steel frame bunks of the most approved pattern, and in all the buildings is a continuous supply of fresh water furnished by means of an Ericcson hot-air pump drawing from a well under the boarding house. The buildings are well heated in the winter by furnaces in the basements. Having clean and attractive quarters and boarding house seems to aid largely in the retention of satisfactory labor, for, considering the present difficulties in employment, this company was successful in keeping without much trouble, two shifts operating steadily all summer.

Forestry Car is Splendidly Equipped

In speaking of the Dominion Forestry Exhibit car which has been touring the Maritime provinces, a St. John, N.B., paper makes the following appreciative reference:

Perhaps the most interesting thing shown is the number of things, all made from wood. This includes samples of threaded pipe, sacks, twine, telescope cable, combs, shirtwaists, stockings, and bandages, besides the usual matches, jails and other well-known articles of commerce. Another phase of the same thing is the exhibit of chemicals obtained from the distillation of wood, acetene, acetic acid, chloroform, methyl alcohol and others.

A very clever model illustrates the different methods of making maple sugar and shows on one side an old-fashioned sugar camp and on the other an up-to-date one, fitted with the modern evaporators and syrup buckets. In front of this model is a bust of King George made entirely of maple sugar.

Another fine model is that of a fire ranger's station and shows the lookout towers and the portable telephones used to connect the rangers with headquarters when a fire is observed.

All the harmful insects are shown and samples of their work on the different kinds of trees are also given. It is estimated that these insects do $70,000,000 damage every year.

A small model of a tree nursery occupies a prominent place in one end of the car. These nurseries are now being used to restore forests in all parts of Canada, in many cases by the lumber companies.

A good many rather startling statistics have been prepared to show the amount of wood necessary to the country and to give striking examples of the care needed in the preservation of our forests and the restoration of parts already cleaned out. It takes a pile of spruce logs four feet high, four feet wide and 9,000 miles long to supply the newspapers of the United States for a year. One Canadian newspaper alone uses 200 trees every day, 10,000,000 ties are necessary every year to keep the railways of Canada in repair, and one company turns out 80,000,000 matches every day.

G. G. Blyth, assistant secretary of the association, who is in charge of this car, reports that they have had large crowds in all the places where they have stopped and that everyone has co-operated to make the trip a success.

What Standard Lumber Sizes Mean

Representative Conference Will be Held in Chicago Shortly to Consider Progressive Step

The need of standard sizes for all the different lumber products has been felt for some time, due to the exceedingly numerous and constantly changing sizes, and the action of prominent lumbermen in promoting standardization presages another prograssive step in the lumber industry. The United States Forest Products Industrial Research Laboratory at Madison, Wisconsin, has been co-operating during the past year with the National Lumber Manufacturers' Association in working out an equitable basis for standardizing softwood lumber sizes. Some of the benefits to be derived from the standardization of sizes are as follows:

1. It makes possible a common language for all. The consumer can substitute one species for another with assurance of getting material of the same size. Similarly, if a contractor starts to build several houses and orders his millwork, sash, doors ,etc., based on certain lumber sizes as to stock around which the casing fits, the kind of wood can be varied as he desires.

2. Architects and purchasers can order more rapidly with one set of sizes,—looking for sizes scattered throughout different grading rule books is eliminated.

3. Material of standard sizes is more salable and by increasing the consumer's goodwill creates and adds value to the products.

4. Building design is simplified, since fewer sizes can be used.

5. Uniformity in construction results, regardless of the grading rules under which the material is purchased. Manufacturers now can not standardize millwork, etc., because it is dependent upon the sizes of the lumber used in building.

6. Remanufacture of larger sizes to match smaller sizes will be reduced and greater utilization with less labor and expense result. The architect frequently designs a building in accordance with the minimum sizes of lumber which may be furnished rather than on a species that can be procured in larger sizes.

7. Standardization of sizes eliminates local legislation on lumber sizes which confuse manufacture and distribution. Such legislation has been already suggested.

8. Standardization makes for fewer sizes and hence greater efficiency, ease and accuracy in lumber grading.

9. It equalizes competition between manufacturers, because present differences in overrun and freight charges are important factors in determining price.

10. It makes possible uniform practice and sizes in re-sawing.

11. It makes possible a fewer number of drying schedules in the kiln drying of lumber. At present the actual thickness of lumber of the same and different kinds cut under the rules of different associations often varies several per cent.

The National Lumber Manufacturers' Association has issued a call for all manufacturers, consumers, and others interested to meet September 28 and 29 at the Congress Hotel in Chicago, at which time action will be taken on the standardization of sizes for all softwood lumber.

Eastern Cut May be much Reduced

According to a well-informed lumberman, who operates on the upper tributaries of the St. John River, there will be a considerable falling off in the lumber cut in New Brunswick the coming season, as compared with last. There being practically no demand for manufactured lumber, the mill men will be obliged to carry over a large part of this season's products, and will not be in the market, to any heavy extent, for "season" logs. There is no call from Boston or New York centres, which have always taken a large part of the St. John product.

The cause for slackened demand is attributed to the fact that builders are unable to secure other essentials entering into construction work, more especially cement.

At a recent meeting of the Surrey Council a letter was read from the White Rock Tie and Lumber Company, per George Thrift, offering $1.75 per thousand stumpage, or a lump sum of $450 for timber on the N. E. and S. E. quarter of Sec. 15, Tp. 1. This land has reverted to the council from tax sale, and the company are logging adjoining property. It is situated between White Rock and the Johnston road, and comprises some 200 acres.

Clerk Lemax explained that the council had not got the deeds to the land, and the matter accordingly dropped.

Delegates See Forest Monarchs Felled

Visit to Capilano Timber Company's Plant—Journalists Take Trip on Western Logging Train

With his spiked shoes gripping the sides of the giant Douglas fir and the weight of his person held by a strap around the trunk and his body, Nick Nickson, crack toprigger of the Capilano Timber Company, freely swung his axe, 150 feet above the ground. Powerful blows quickly made their impression through the thick bark and into the heart of the forest giant. Presently forty feet of tree top leaned over slightly away from the trunk and suddenly it hurtled far out into the air and crashed to the ground. Another spar was ready for logging operations for a thousand feet in area.

The feat of the Russian woodsman, his sang froid manner in the midst of such a spectacular accomplishment, was a sight that a few months ago created the wildest enthusiasm among the members of the American Editorial Association who witnessed it. Recently the visiting members of the Imperial Press Conference and their wives, forming a party of nearly 150, were treated to the same experience. The result formed an interesting comparison between the temperaments of the Englishman and the American. Both were undoubtedly impressed with the scene, which to the great majority was a novel one, but they showed their appreciation in widely divergent ways. A startled expression and a surreptitious movement towards pencil and notebook, so that he could relate in realistic manner, this splendid sight to his fellow countrymen, was the Imperial pressman's way.

Then the Imperial visitors were given another thrill. A crew of loggers attacked another great sentinel of Crown mountains. Experts upon whom, in the first instance, depend the lumbering industry of British Columbia, with axe and saw, soon brought the monster tree to earth with a crash that resounded throughout the surrounding hills.

"It will be 300 years before another tree like this grows to take its place," said one of the newspapermen, when the noise and dust had subsided.

"There were 20,000 feet of lumber in the tree," observed a writer for a trade journal.

Others were deeply impressed with the significance of the scene, but they were not newspapermen and made no comment.

Thus in their various characteristic ways the distinguished visitors enjoyed the many thrills provided for their entertainment by Mr. G. G. Johnston, manager of the Capilano Timber Company.

To the majority of the members of the Imperial Press Conference, the day's outing on the North Shore was an unique experience. They had heard much of the great lumbering industry of British Columbia and had been prepared to expect much and if their comments on the conclusion of the day were a true commentary, the realization was equal to their expectations.

They were given a close-up picture of interesting stages in the logging industry, not the least of which was the final passage to the water of the trees they had seen felled on the mountain side, ready for shipment to the sawmill.

In a logging train the guests followed a long line of great logs along the company's track to Burrard Inlet, and it was a revelation to them to observe the expeditious manner in which cars of logs, many feet in girth, were so easily tipped by a steel cable, operated by a donkey engine, into the sea, with a great splash, sending the water many feet in the air. On one occasion the steel cable broke and here the visitors were given a striking illustration of the efficiency of Canadian lumber jacks, for it seemed but a minute or two before one of the employees of the company had spliced the cable and immediately afterwards more carloads were being thrust into the sea.

The visit to the Capilano Canyon was another unforgetable experience. Joyously Lord Burnham and his associates walked the swaying bridge and like the thousands who have preceded them, speculated on what might happen should the cable break. True, it may have been that His Lordship inadvertently referred to the canyon as a "gien," but he was not then selecting his words for the story he will relate to his friends when he returns home.

The climb on the train up the steep side of the mountain was a novel experience, the powerful engine overcoming the seemingly impossible grade after a struggle and great clouds of steam and smoke. The scene at the point where the loggers were working loading the cars with logs brought numerous cameras into action.

It was a fitting climax to a day replete with such new experiences that another surprise awaited the party when a logger's meal was served at the bunkhouses of the timber company. It was a meal not soon to be forgotten by the excursionists, whose appetites had been whetted by the mountain and an unusual exercise, climbing over fallen trees and through underbrush. Piping hot soup and tasty veal with dressing, new potatoes, bread that invited another slice, fresh tomatoes, cucumbers, green onions, with a tang, sausage roll, jelly rolls, cake, peaches, coffee, the aroma of which filled the room, butter that had no equal, sauces and pickles of many varieties and other palatable delicacies added zest to appetites that required no coaxing.

It was explained that it was an average meal served in the camp, with the addition only of paper napkins.

The women in the party inspected the spotlessly clean kitchens and were flattering in their praise. Everyone showered compliments on the cooks, and, after visiting the bunkhouses of the employees, the management of the company received flattering words of commendation for the manner in which the men were accommodated. The sleeping quarters, with their white, clean walls, comfortable beds with white sheets, and the beautiful flower boxes at every window in the camp, every box with half a dozen varieties of flowers in full bloom, caught the favorable attention of every member of the party.

At the conclusion of the day's trip on the North Shore, Lord Burnham's comment that, it was an experience and pleasure that would stand unique among the many wonderful entertainments that have been provided for his party in Canada, was one that it was quite evident from the general conversation, expressed the sentiment of each member of the party.

New McGibbon Mill is Fire Proof

The new sawmill of the McGibbon Lumber Co., Penetanguishene, which has been in full operation for some time past, replaces the old one which was burned down last October. Although last winter was a very severe one, the company managed to build the mill and start cutting on July 3rd. It was erected under the supervision of James Warnock, a Scot of the old school, who is an expert millwright and mechanic. The foundation is concrete on piles. The lower storey is built on 12 in. x 12 in. pine, and the upper storey, 8 in. x 8 in timbers, with a filing room on the third floor. The mill is as fireproof as it is possible to have it, and is whitewashed throughout, with

The new fireproof mill of the McGibbon Lumber Co. recently completed and put in operation at Penetanguishene, Ont. The mill is covered with sheet metal and represents the latest ideas in construction.

hydrants upstairs and downstairs. The whole structure is metal-sheeted and with equipment cost $100,000.

The mill has a heavy double-cutting Waterous band saw, Waterous carriage and Mershon resaw. The installations are up-to-date in every respect with slash table, modern trimmers and lath mill. The capacity is about 60,000 ft. of long lumber per day, and 40,000 pieces of lath in ten hours. The power house consists of three 72 in. x 18 in. Goldie & McCulloch boilers, carrying 125 lbs. of steam. Dutch ovens are installed and the power is supplied by a 28 x 38 slide valve engine. The boiler house is constructed of concrete and brick. The lumber is taken out on cars 12 ft. high and requires three gangs of pilers.

The McGibbon Lumber Co. have a stock of logs amounting to 150,000 pieces, which they will not be able to finish cutting this season, but they look for an early start next spring. The production of the mill this year has been sold to the R. Laidlaw Lumber Co., Toronto.

Paper Salvage From City Rubbish

Thirty per cent. of the total weight of city rubbish, exclusive of ashes and garbage, as proved by a recent test by a Continuous Beater Company of Ohio, was a fiber suitable for making the coarser grades of paper. The Bureau of Standards at Washington describe this test. For it 70 bales of rubbish weighing about 37,570 pounds were sent from Pittsburgh. The rubbish was not sorted except to take out.

Specialist in Hardwood Lumber

J. A. R. Racicot, Sherbrooke, Que.

J. A. R. Racicot is a member of Boisse & Racicot, wholesale lumber dealers, Sherbrooke, Que., which firm was organized about a year ago. They have a sawmill at Bonally Lake, P. Q., and have recently moved into new offices in the Olivier Building, King and Wellington Streets, Sherbrooke.

Boisse & Racicot specialize in hardwoods, in logs or sawn lumber, and deal in pine, spruce, hemlock, beech, birch, maple, ash, elm, basswood, as well as ties, posts, shingles, lath, etc. The senior partner of the firm, H. Boisse, resides at North Stukeley, and has been operating a saw mill at Lake Bonally for twenty years. He has a wide insight into the manufacture of lumber with which he is thoroughly familiar.

Mr. Racicot was formerly manager of the Elmitt Lumber Co., Limited, and also managed the business of A. Trudeau of Sherbrooke, wholesale lumber dealer, and six years ago Mr. Trudeau presented him with a half interest in the business in appreciation of his faithful service and valued work. The year following Mr. Racicot, owing to ill-health, had to discontinue business for three or four years, and it was not until last fall that he joined Mr. Boisse to operate mills and conduct a wholesale lumber business.

The firm report that trade with them has been steadily increasing and it is their intention to erect another mill during the coming season. A large portion of their trade is in Ontario and the U. S. A. They consider that they are fortunate in having their head office in Sherbrooke, which is the centre of the best hardwood district in the Province of Quebec.

Will New Brunswick Minister Step Down?

Hon. Dr. E. A. Smith, Minister of Crown Lands, is said by an eastern newspaper to be about to retire from the provincial government of New Brunswick.

Pressure of private business is being given as the reason for his impending retirement, by his colleagues in the cabinet. The journal in question says, however, that rates of stumpage for lumber cut upon the Crown lands and matters connected with the location of New Brunswick's first game preserve are the questions over which the differences have occurred, causing the first resignation that has taken place in the Foster Cabinet. One of the Government caucuses last season was the occasion when the row over the game preserve was staged, says the newspaper. "The location which had been approved by Dr. Smith for the sanctuary interfered with hunting grounds and other interests in Victoria county, and Hon. J. F. Tweedale, Minister of Agriculture, after the matter had been often discussed at cabinet meetings, took the question to the caucus as a court of last resort. The result was a sizzling row before all the government supporters, which caused a lot of talk about the lobbies. When the stumpage question came up, it is said Dr. Smith personally favored a rate of not less than $7 a thousand and it is even declared that, supported by his deputy minister, he thus recommended to the Government as Minister of Lands and Mines. The Government's decision was a $5 rate and Dr. Smith's impending retirement is said to be the direct result."

When Premier Foster was asked if Hon. Dr. Smith had resigned, he declined to either confirm or deny the report, and said he had nothing to say in the matter at this time.

Working Out Plan to Settle Disputes

At the Annual Meeting of the National Wholesale Lumber Dealers' Association, held in March, Mr. J. B. Montgomery, Pittsburgh, Pa., Chairman of the Arbitration Committee, submitted a recommendation which was unanimously adopted by the convention, authorizing the committee to approach other lumber associations with a view to working out a plan to arbitrate disputes between a member of one lumber association and a member of another association. The by-laws of most lumber associations cover the question of arbitration disputes between their own members, but there is no arbitration method covering disputes between a member of one association with a member of another association.

Mr. Montgomery and Mr. E. F. Perry, secretary of the National Wholesale Lumber Dealers' Association, have since been in correspondence with a number of lumber associations and the replies received indicate a strong desire to attempt to work out some inter-association arbitration plan on a practical basis, and it was planned to hold a conference of association representatives during September, to discuss this important subject. The Yellow Pine Wholesalers' Association has called a conference of association representatives to meet in Cincinnati, Ohio, October 7th and 8th, for the purpose of taking up a number of subjects, including arbitration, and in view of the enactment already existing in favor of a more extended application of the principle of arbitration, the proposed conference in October will afford an excellent means for a full discussion of this subject. The National Wholesale Lumber Dealers' Association is very much encouraged with the prospect of formulating some method that will avoid unnecessary litigation on lumber disputes, and it seems now that the way is open so that the various lumber associations may get together on a satisfactory plan which will accomplish the end sought for.

Press Delegates Visit Big Sawmill

Speaking of the recent visit of the Imperial Press delegates to Vancouver, B. C., a press despatch says: At Hastings Mills Lord Burnham and his colleagues were met by Mr. Eric Hamber, Mr. J. A. Hendry and Mr. A. J. Hendry. They welcomed the press party and saw that each visitor was presented with a handsome memorial of the visit in the shape of an illustrated card, containing an official welcome, a splendid reproduction of photograph of lumber stored on the docks and a brief detailed history of the mills. Then the tour of the plant commenced. The dry kilns were opened, the planing department seen, and the log pond visited. Here the great timbers were being snaked upon the iron carriers and turned over to the saws. One particularly large stock was just going up when the party arrived. It was stopped and every one mounted it to pose for still and active pictures. Then on through the whine of the great saws, the thunder of flowing timbers, the whirr of pulleys and belts.

Arriving on the other side of the plant they found the big log on which they had stood at the pond was again waiting them. But this time it had been trimmed down to the form of a gigantic squared timber sixty or seventy feet long. Again the entire crowd mounted the stick and smiled at the photographers.

Claim for $54,000 Was Dismissed

Mr. Justice Guerin of Montreal, has non-suited in the Superior Court the Canadian Last Block Company Limited, whose instance was taken up by Alexandre Desmarteau, liquidator for plaintiff company, in an action against Narcisse Lord and Pierre Trahan of St. Johns, Que., for $54,346 damages alleged to have been suffered through seizures being placed upon plaintiff's goods and salaries by defendants.

Messrs. Lord and Trahan were the principal proprietors of the St. Johns' Improved Last Block Company, and they sold their business to the plaintiff company, receiving payment in debentures. The seizures were made through alleged failure of the plaintiff company to meet the interest dues, but they could not be sustained because the plaintiffs had given the Royal Bank of Canada a prior privilege claim on their properties.

The court found the plaintiffs had reason to believe that the plaintiff company had not honored its obligations towards them, and to believe that they had a right to seize the effects on which they considered they had a privileged claim under their contract of sale.

The action was dismissed, with costs.

Mr. Grainger Returns From Conference

Members of the forestry branch welcomed Chief Forester M. A. Grainger recently in Vancouver. He arrived with the Imperial Press Conference delegates, having attended the British Empire Forestry Conference in London. He spent the day at the Vancouver office, going over affairs affecting this district.

The London conference was the initial event of its kind, at which co-ordinating machinery to conserve the timber properties of the entire Empire was set in motion, said Mr. Grainger. Eighty delegates were in attendance, representing every outpost of Tmpire. The next conference will probably be in Canada, in 1923, after two years of the outlined policies have been in operation.

Throughout Britain large areas of Douglas fir and Sitka spruce are being grown from cones supplied by British Columbia. It rained every day Mr. Grainger was in England and he is convinced that the moist climate will materially aid the experiment to create timber reserves.

Getting Foothold in Retail Lumber Arena

How Enterprising Dealer Surcharged with Public Spirit Captured Trade and Brought About Numerous Improvements on Main Business Street

By W. Arthur Lynn

Jefferson attracted me from the outset. It was when I was passing through the southwest part of the State of Indiana looking over the possibilities of the farm trade in the lumber line early in the fall of 1918, soon after Armistice was signed, that the future of this town appealed to me.

A prettier little place I had never seen among the rich and rolling farming country on the banks of the Wabash. The rural lumber requirements looked good to me and a blind man could have visioned the rapid growth of the town situated as it was in the heart of so prosperous a countryside.

I moved into Jefferson and opened my lumber yard early the following spring and only a month had elapsed when I knew my move would cause me no regret. True, building was by no means in a healthy condition in those dark days, but I managed to take a part of the business that offered as the farmers and town people were forced to do a certain amount of building and repairing to keep things going till the silver lining appeared a little brighter.

Playing the Game Aggressively.

My competitor was well established and prosperous, his grandfather owning the business before him and was the only retail lumber merchant in the town before I opened up on the opposite side of the place. A good future was before me and in that town and section lay my bread and butter if I played the game right and placed my propositions and business in a more attractive style than my competitor. I was a stranger to be sure, having only a few casual acquaintances, but I was young and sure of prosperity if I chose to promote my business along the right avenues. Everybody was prosperous and money was being made as it was never earned before , and I argued if people could afford to pay ten dollars for a few minutes ride in an aeroplane, why I decided it was up to me to show them a better way to invest their money and yet have something to show for it in time to come which they would be not only be proud of, but which would lead them to recognize the higher objects in life,, of which better homes and dwellings are among the foremost.

That summer brought me many friends and my family became as much attached to the town as I was myself. Many an evening I spent turning over new methods in my mind for the extension of the business and the most cherishing thought that passes through my mind today is the fact that it was not all without reward. As I mentioned before, Jefferson was really an attractive and budding little city. One of the most pleasing characteristics was the presence of the cosy bungalow style of domicile which was very popular in that section of the country. A large percentage of the residents of Jefferson had moved in from larger cities with the opening up of several plants and factories and with this new element came a wider view, a better taste, and a new awakening which gradually manifested itself in the older residents of the town. In describing this new life of Jefferson which of course came about in a gradual manner, would say, it showed most brilliantly in the middle classes. The grass in front of the houses was kept tidier, and on one street as I passed along one spring evening there were no less than ten houses within a single block being repainted by the dweller as if in competition to his neighbor.

Got More Favorable Impression.

It was these little surface improvements to the already pleasing residential sections which gave me my idea as I walked down our main street one Saturday evening in company with my wife. There was something about that street that puzzled me. After strolling through other parts of the town which were already taking on that up-to-dateness which is so pleasing to the first glance of the stranger, this street was different not only because it was purely a business thoroughfare, but it was not at all in keeping with the rest of the town.

At the corner my wife spied a neighbor friend and crossed the sidewalk to speak for a moment. I stood and looked down the opposite side of the street, and as the thought had just entered my mind I took this chance to exploit it. The general lines of the street were those which could be found in any of the larger cities of the country, but the store fronts looked old-fashioned and shabby against the background of the other more modern parts of the town. The stores were of that old, country store type, square, boxlike, with panels crossing the window area converting the glass into several sections. The platforms just off the sidewalk were badly worn in many cases, while wooden pillars, which were entirely out of place, often adorned the entrance, which is a typical feature of small town stores. The interiors of others could be made much more convenient both for customer and merchant in the rearrangement of counters, showcases, etc., allowing for more floor space which would facilitate better display.

I went home that evening fully convinced that the storeowners could not only improve the appearance of our main thoroughfare, but could also attract more business and increase their bank account with an up-to-date store front. I realized from the first the necessity of showing these men where it would directly benefit their interests, and would unconsciously attract the public because of its openness and bright appearance as compared to the old style front.

Good Front Brings Business.

My first step was to send away for some modern plans of store fronts showing attractive color designs for the painting and decorating and illustrating the completed structure. My next move was the taking into confidence a contractor with whom I had had several previous dealings, and of whom I could depend upon to see the actual building end through to the best of satisfaction. Our next problem was to pick the right prospect for a start, as a bad beginning has often wrecked the most promising business chances. We spent considerable time on this point, and at length agreed upon one of the larger grocers to whom we would place the proposition first, Armed with bright plans suitable for grocery stores and fully convinced ourselves of the mutual benefit to be derived from the alterations, we called upon our choice, believing that if we could land this first man who was well known as an honest and practical business man, no more than the usual trouble would be encountered with the rest. We placed our proposition with this man in a business-like manner, suggesting the benefits which could be the only possible outcome of such an improvement and giving him a good idea as to the ultimate cost, at the same time visualizing for him the completed store front, modern and attractive, increasing his window space which meant better displaying, an opportunity he could not afford to lose in the advertisement of his merchandise.

The doors, illustrated in the designs, proved to be a good drawing card, as they allowed more light into the interior of the store and were a decided improvement upon the old warped entrance which was passed the period when paint would cover the multitude of sins.

The tasteful colors, which the illustrations brought out to good advantage, afforded an excellent idea of how much more attractive the new front would be to the public eye, in comparison to the dull, prison-like appearance of the present one which was defeating the purpose of the business it was supposed to be in harmony. Of course at first thought, as we anticipated, the merchant considered the suggestion as entirely foreign to his interests, but after listening to our further explanations in a broad-minded way, he assured us he would give the proposition every consideration.

The first contract was secured a week later from the grocer. Construction was started immediately, my yard supplying the lumber, nails, paint, etc., of which I carried a side line of the latter, while friend contractor did himself particular credit by turning out a first-class job. Our first store front completed, certainly looked all we had prophesied, and to help it along we suggested a big advertisement campaign to be launched by the grocer, aided by a snappy window display. The merchant recognizing the timeliness of the suggestion, spared no pains in the preparation of his window and distribution of circulars, etc., at the same instant advertising our interests in a model way.

Business Rolled in Rapidly.

The following month we secured eight more orders for remodelling store fronts, giving voluntary suggestions such as slanting windows for the gents' furnishers, encouraging the passer-by to step off the sidewalk to obtain a closer view of the window display, and consequently bringing the public nearer the actual entrance where a complete view of the store itself could be obtained. To the Chinese restaurant, when securing their desire for the improvement, we suggested a fern plant to be placed in the window instead of the ugly flypaper to which it had previously been decorated. Little suggestions given in an entirely modest manner not only helped the sale along,

but left a feeling of confidence that we had their best interests at heart which could only do one thing for our business—boost it.

At the termination of three months' time practically every store owner on the street had made the alteration to his front, while many had the interiors completely done over. Those who could not see their way clear, acknowledged the advantage of the improvement and voiced their intention of taking the step forward in the very near future.

The growth of Jefferson after the revolutionizing of the main street has been remarkable. Capital and labor were attracted by the new and prosperous appearance of the town.

We turned our main street inside out and today it stands out in complete harmony with the rest of the town. Old boys returning home for a visit and people who have not been in Jefferson for several years all comment upon the up-to-date and modern appearance which greets them at every turn, and it is with no small degree of pride that I view our main street of today with the satisfaction that my suggestion, which was, after all, only a small part of the programme of the day, placed me on my feet in my new surroundings and advertised my business, putting me in line for the trade that is now offering with the gradual increase of building, which we one and all sincerely hope will continue to thrive.

Manouan Pulp and Paper Company

Atlas Bond and Security Corporation announce that they have recently underwritten the entire issue of $2,400,000 of bonds and debentures of Manouan Pulp & Paper, Limited, carrying a bonus of common stock.

This company, which was organized about ten years ago as a holding company, is now developing a power on the St. Maurice River just below the confluence of the Manouan and St. Maurice Rivers. They have also owned for many years extensive pulp limits adjoining Laurentide, Belgo-Canadian and St. Maurice Paper Company limits.

It is proposed to build a 100-ton ground pulp mill immediately, with the ultimate idea of adding large sulphite and news print mills later, the power now being developed being more than sufficient for that purpose, consisting as it does of about 38,000 h.p. The power which is known as Allard Falls, is one of the last remaining large power sites on the St. Maurice.

The Atlas Bond Company state that they have already placed by private offering the major portion of the issue, and expect to make a public offering of the remainder during September.

The vice-president of the company, J. S. Rigby, announces that following the recent death of Frederick Abraham, the late president of the Atlas Bond Company, arrangements have been made whereby a well-known Montreal financier will shortly join their company in an official capacity.

Service and Personal Touch Will Win

What happened? Just two things could happen. If the dealer is on to his job and keeps busy at it, he not only furnishes the plan but sells the material; but if he is one of the other kind and his prospect has read all the good reading sent him by a high salaried man kept just for that purpose, then the mail order house gets the business, says J. W. Lamm of Danville, Ill., in the "American Lumberman."

We have been in the retail business for thirty years and for the last eight years were in a small town of less than two thousand and out of this town went every month more than $50,000 to the mail order house. In that time not one house job in our territory was shipped in by the mail order house, although we naturally had them to compete with at times.

How did we do it? First by using the brain given us for that purpose. We know architecture and could draw plans, which every retail dealer should know. Right here, if you do not know how to draw and read plans, take that spare time you have, get into a good correspondence school if you are too old to go to college, and work until you know how.

In all our experience there has never been a published plan that just suited the one who wanted something like it. Always a room changed, one added on, this or that moved around or something that did not exactly meet the likes of the prospect. Right here is where architecture comes in. You can easily convince your prospects that you can and will draw them plans just as they want them, give them as many sets of blueprints as they want, and all free, gratis, for nothing. At the same time let them know that when they have your plan they will have one that their neighbor, or the entire neighborhood for that matter, cannot have. When you get to draw the plan you have the battle won.

If you cannot draw plans, get a line of good planbooks and work on them until you can draw yourself. Keep your contractors on your side and you have made another friend who will send the business to you.

The American Lumberman has been full of the following for years, but it is worth repeating. Keep in touch with your trade. After your day's work is finished, get in your little gas wagon, take your wife if you have one. If not get one or your best girl and drive out to see some of your farmer friends. While she is helping the wife clear up the dishes, playing with the kids or "kidding" the wife along as any woman knows how to do, you get busy on John. If you do not know the farm let him do most of the talking. More than likely he belongs to the same lodge you do. Talk to him about the last third degree. But do not talk shop unless he mentions it. It is not a bad idea to look around at his buildings, and if a roof needs repairs, or a new barn is required, stop and look, let the subject you are on lag a little and he will bring up the subject that is near your heart. Then you can finish it.

There are a number of ways to keep it from happening, and we believe that by knowing plans, keeping a smile on your face, studying the handshake and remembering to use it, learning to read human nature and above all things using the brain matter given you, there will be very little mail order business coming into your territory.

Active Experience in Lumber Game

H. R. Van, Quebec, P.Q.

H. R. Van of the Louise Lumber Co., Limited, wholesale lumber dealers, Quebec, was one of the most active members of the reception committee at the last annual convention of the Canadian Lumbermen's Association, held in the ancient capital, and was met by a large number of gentlemen from Ontario and the West. He is vice-president of the Louise Lumber Co. and in the vocation of lumbering has had a quarter of a century's active and varied experience, from the stump to the manufactured article.

Mr. Van started as a boy with his father, who was in the lumber business in the townships of the Lake Megantic district, and continued with him until 1907, at which time he bought out his interests in that vicinity and conducted the same under his own name until the fall of 1917, when he disposed of his holdings. He then started in the wholesale game and has since been associated with the Louise Lumber Co., which has built up a large business.

Our strongest competitor is our old friend "Cancelled," says the house organ of a western lumber firm. We have lost more business to him this year than to all our other competitors combined. Almost half of the estimates we have figured this year have been cancelled. We do not know whether this is a greater or lesser amount than in previous year as we have no comparative figures, but we do know that the proportion is entirely too great. It ranges all the way from nothing at some of our yards to as high as 80 per cent. of the total business figured at others.

It Isn't the Town—It's You

"If you want to live in the kind of a town
Like the kind of a town you like,
You needn't slip your clothes in a grip,
And start on a long, long hike.
You'll only find what you left behind,
For there's nothing that's really new,
It's a knock at yourself when you knock your town;
It isn't the town—it's you.

Real towns are not made by men afraid
Lest somebody else gets ahead,
When everyone works and nobody shirks,
You can raise a town from the dead.
And if while you make your personal stake,
Your neighbors can make one, too;
Your town will be what you want to see,
It isn't the town—it's you.

Lumber Firms Unite Their Forces

An amalgamation of the Canadian interests of the Export Lumber Company, which for forty years, has been well and favorably known to the Ottawa lumber market and the Canadian lumber trade in general, has taken place and among the Ottawa changes, in connection with the newly incorporated company, to be known as the Taft-Davis Lumber Company, the extensive piling grounds of the organization covering thirteen acres on Preston Street and south of the G. T. R. tracks have been taken over. The grounds are assessed at over $25,000.

The amalgamation of forces of the Export Lumber Co. which has its head office at Boston, Mass., and the selection of Mr. A. Mayno Davis, president of the McAuliffe Davis Lumber Co. (who occupies the same position in the new company) is a concerted step on behalf of the export interests toward the abolition of the previous offices of the company in Canada, and the bringing of the Canadian business under the one head at Ottawa.

The capitalization of the new company, which in certain circles of the lumber trade is regarded as being extremely low in comparison with the scope of the new concern, is $600,000. This capitalization, however, is explained somewhat by the fact that the principal shareholders, of which the Export Lumber Co. is chief, is a close corporation. The officers of the new company are: President A. Mayno Davis, who is also head of the McAuliffe Davis Lumber Company. Mr. W. Allen Taft, president of the Export Lumber Company, Boston, is vice-president, and Mr. Gilbert Allen, formerly of the Export Company is secretary-treasurer.

Mr. Davis came to Ottawa in 1896 and first engaged with the Export Lumber Company with which firm he remained for ten years, then forming the Chaudiere Lumber Co. which was situated on Chamberlain Ave., and after three years of operation in 1909 was absorbed in the amalagamation leading to the formation of the McAuliffe Davis Lumber Co.

Mr. W. Allen Taft, the vice-president, is a son of the late Waterman A. Taft, former president of the Export Lumber Company, who died about two years ago. Up to the time of his death Mr. Taft, Sr., was one of the best known lumber salesmen and buyers in both the American and eastern Canadian lumber markets. His son succeeded him to the position of president of the company.

Mr. Gilbert Allen, secretary-treasurer of the company, has for over the past twenty-five years been a valued member of the Canadian branch of the Export Lumber Company. Mr. George I. Dewar, a well known Ottawa citizen, was formerly the Canadian manager of the Export Lumber Company.

The Export Lumber Company did a business of around fifty million feet per year, which was largely distributed between the Canadian trade and the forwarding of the remainder to the headquarters of the company at Boston for sale on the American market.

The chief business of the new company will be that of wholesalers, and will be principally confined to buying and sorting. The company, which has its head offices in the Jackson Booth Building, intends to carry on both an export and domestic trade and will principally pay attention to white pine stocks. It is announced that it intends to keep on hand around 20,000,000 ft. of dry and semi-dry stock of various grades. The new company operates under a Dominion charter.

The interests of the McAuliffe Davis Company which are largely of a retail nature, are, the "Canada Lumberman" is given to understand, not going to be affected. Mr. Davis will remain as the president of the new companies.

General Survey of Lumber Field

The Labor Gazette, Ottawa, in its last issue presents the following interesting review of the lumber industry in Canada from Coast to Coast:

Charlottetown reported quiet conditions in the lumbering industry during July. At St. John and Fredericton the saw and shingle mills run steadily. Two lumber camps at Bathurst were opened up during the month, and full operations in eight or nine camps were to start as soon as men could be secured. In Quebec district the saw mills worked to capacity on the season's cut, and at Sherbrooke the saw and shingle mills were also very busy. The saw and shingle mills at Ottawa and Hull had a busy month. At Pembroke the mills ran steadily, but shipping was hampered by shortage of cars; men were in demand early in the month for shipping pulpwood; the low water holding up one or two drives may curtail operations later in the season. Saw and shingle mills at Peterborough continued very busy. Timmins reported some demand for sawyers, setters and trimmers, all the mills being busy. At Owen Sound, saw mill workers had an active month. At Sault Ste. Marie men were in demand for the pulp and pine woods, and also to cut cordwoods; men were required for the sawmills at Port Arthur. Sawmill workers were in demand at Prince Albert. Edmonton reported a shortage of mill workers and bushmen. At Fernie all the mills worked fairly steadily in spite of unsettled market conditions; occasional shortage of labor was felt, and there was some difficulty in transporting logs to the mills; about 700 feet of flume used for this purpose, was destroyed at Boulder Creek in a bush fire, which also burned 2,000 newly cut logs. Nelson and Trail reported the lumbering industry fairly active, some mills having sufficient men and others running short handed; a new sawmill on Porcupine Creek was working to capacity. Experienced millmen and bushmen were in demand at Cranbrook, Kamloops and Chase. At Vancouver the coast lumber and shingle mills and camps were reported still fairly busy, though conditions were somewhat unsettled; small tie camps scattered through the country were generally busy. New Westminster reported activity in the saw and shingle mills, but some large mills were temporarily closed for repairs or stocktaking. Loggers and bushmen were in demand at Prince Rupert. Victoria reported activity in the lumbering industry, excepting shingle mills. Nanaimo also reported lumbering rather less active on Vancouver Island; the logging camp and sawmills at Port Alberni closed down early in the month, but re-opened later.

Lightning Causes Many Forest Fires

Of a total of 102 fires handled so far this season in Washington, forty were caused by lightning. Losses of timber and logs aggregated about $12,000 and logging equipment loss has been slightly more than this, says "The Forest Patrolman" of Portland. In the territory covered by the Potlatch Timber Protective Association, Iaho, out of 23 fires the last half of July, 20 were caught by lightning, and during the same period 30 out of 31 fires reported by the Clearwater Association, Idaho, were lightning fires. There have been no serious fires so far this season in Oregon.

The average annual loss in the United States from forest fires is about $28,000,000.

Oregon, with 1/5 of the timber in the United States, and the third state in lumber production, expends $27,000 to maintain a State Forester and his assistants and carry on protection in the field; Washington, the leading state in lumber production, spends only $40.000, while Maine, most of whose forests have been cut over several times, expends more than $100,000 yearly for forest protection, and Minnesota, about $125,000.

Acquires New Tract of Timber

The Emporium Forestry Company of Utica, N.Y., which owns a large tract of about 90,000 acres of timber between Cranberry Lake and Tupper Lake, which it has been lumbering for the past several years, has just acquired a tract of 8,000 acres from the International Paper Company in the region south of the Brandy Brook country.

The tract has already been lumbered to some extent for the pulpwood by the International, but a large amount of mercantile timber, including hardwood, is still standing and this will be taken off by the new owners.

The tract was in the region which for some time was under lease as a game preserve by the Indian Mountain Club before it went out of existence.

The Emporium Forestry Company, which owns and operates a large saw mill at Cranberry Lake, produces from 75,000 to 100,000 feet of lumber daily and employs a large force of men.

Matches Not Fit Food for Rats

The theory of the rat and the match as a cause of fire has been presented to Fire Commissioner Latulippe, in a communication from Chicago, where some extraordinary experiments have been made, with the view of deciding whether the origin of fire can truthfully be traced to this cause. The substance of the report on these investigations, which were made by the engineers of the Underwriters' Laboratories, working in conjunction with the match manufacturers, is that the rat and match theory is a myth, and that rats and mice would rather starve to death than eat the modern match heads.

Looks for Still Higher Prices

"The price of paper will be higher than ever next year," says E. W. Backus, of Minneapolis, the American millionaire, who is interested in many pulp and paper companies with Canadian holdings. "The reserve stock of wood is gone, and that will mean taking on more men. The condition of the labor market is uncertain, and men want bigger wages than ever. The coal situation is a serious one, and with the increased prices of haulage the price of paper must necessarily go up."

Personal Paragraphs of Interest

H. T. Wright, shingle manufacturer, of Nanaimo, B.C., was in Toronto recently on a business trip.

Hugh A. Rose, of Rose, McLaurin, Limited, Toronto, left recently on an extended business trip to the coast.

O. E. Fortune of Gill & Fortune, lumber dealers, Trenton, and wife, spent a few days in Toronto recently on a visit.

L. C. Stafford, assistant manager of the Chicago office of the Vancouver Lumber Co., Vancouver, was a recent visitor to Toronto on business.

John B. Reid, of Toronto, president of the Ontario Retail Lumber Dealers' Association, and Mrs. Reid, are spending a few weeks at Atlantic City.

George A. Gall of the Piercy Lumber Co., Vancouver, B.C., spent a few days recently in Toronto and Montreal, calling upon the members of the trade.

Maurice Welsh, of Campbell, Welsh & Paynes, and family, have returned to Toronto after an enjoyable holiday at their summer home at Bobcaygeon.

R. H. Spencer of Gill & Fortune, retail lumber dealers, Trenton, has returned from an extended visit to Calgary, Vancouver and other points in the west.

C. W. Wilkinson, of the Union Lumber Company, Toronto, has gone on an extended business and pleasure trip to the Old Country. He is accompanied by Mrs. Wilkinson.

Hon. E. H. Armstrong, Commissioner of Works and Mines in the Nova Scotia Government, defeated Mr. Z. F. Bower, lumberman, in a by-election for Shelburne County. Mr. Bower was an independent candidate.

P. D. Gordon, of Mason, Gordon & Co., has returned to Montreal, after a visit to the Pacifice Coast. He reports that the domestic demand for B. C. forest products is dull, but that a large business is being done in exports.

S. H. Lindsay, of Collingwood, Ont., has resigned the treasureship of the Collingwood Shipbuilding Co., and intends removing to Toronto. He still retains the position of secretary and will have his headquarters in the latter city.

Dan McLachlin, of McLachlin Bros., Arnprior, Ont., who is president of the Canadian Lumbermen's Association, has been elected a director of the new company which has taken over the plant of the Dryden Pulp and Paper Company at Dryden, Ont.

With the death of Joseph Williams, of Sunnyside Avenue, Toronto, Ontario loses one of its pioneers. Mr. Williams, who was seventy-six years old when he died, was a grandson of Benejah Williams, the first settler of Glen Williams, and a son of Charles Williams. His father founded the lumber, flour and woollen mills of the flourishing community. The family were United Empire Loyalists.

D. M. Allan, late of Victoria, B. C., has been appointed representative in Ontario for the Canadian Puget Sound Lumber & Timber Co., Victoria, B. C., and has opened an office in Stratford, Ont., of which city he is a former resident. Mr. Allan, who served three years overseas, has been calling upon the trade lately in Ontario in the interest of the new firm. He has had a thorough experience in both the mill and yard and has already created a favorable impression.

W. B. Tomlinson, of Tomlinson & Mitchell, wholesale lumber dealers, of Winnipeg, spent a few days in Toronto recently with A. E. Masuret, Ontario representative of the firm. Mr. Tomlinson reports that business is rather quiet in the west and that there is a great scarcity of cars for shipments of lumber, the bulk of rolling stock being taken for the conveyance of coal and grain. He looks forward to a fairly active business this fall in the lumber line, although there is no doubt that the increased freight rates will tend to hold trade back for some time.

Canada's Position in Pulp Arena

The total capital investment of 94 Canadian paper and pulp mills for the calendar year 1918, just published by the Dominion Bureau of Statistics and quoted by the Bureau of Foreign and Domestic Commerce, is $241,344,704; of which British Columbia's share is $42,705,988; Ontario's, $88,576,807; Quebec's, $101,456,296; New Brunswick's, $7,852,225, and Nova Scotia, $753,388. Of these 94 mills, 37 are pulp, 31 paper and 26 pulp and paper.

At a recent convention of forestry experts and paper manufacturers held in New Hampshire, a conference between representatives of the United States and Canada to settle the controversy over pulpwood from the Crown lands of the Eastern Canadian provinces was urged by Col. Henry S. Graves, former chief of the U. S. Forest Service, and approved by the president of the American Paper and Pulp Association.

Ellwood Wilson, chief forester for the Laurentide Co., Grand Mere, Que., defended the Canadian policy, asserting that the situation had been misrepresented for the purpose of forcing Canada into withdrawing or modifying her pulpwood embargo. He said that the State of New York had forbidden cutting on state timber lands and argued that if this was permissible in the United States, the Canadian provinces had the right to regulate the cutting and manufacture of wood from the crown lands.

The secretary of the Canadian Pulp and Paper Association said that the shortage of printing paper in the United States was due not to Canadian timber regulations but to world-wide conditions aggravated by the excessive use of paper by both American and Canadian publishers.

Col. Graves urges the development of the existing available pulpwood in the western United States, which he says would make this country independent in supplies for newsprint material.

Leading Exponent of Hardwoods

George G. Goodfellow, of Montreal, wholesale lumberman, has made remarkable headway in the lumber trade, and in a very few years he has extended his business in many directions. He has a large trade in hardwoods and also in B. C. products, keeping large stocks of lumber in two Montreal yards. At the last annual meeting of the National Hardwood Lumber Association, in Chicago, Mr. Goodfellow was elected a director until 1923, being the only Canadian representative elected at that meeting.

George C. Goodfellow, Montreal

New Barkers at Iroquois Falls

The Abitibi Power & Paper Co., Ltd., is installing four drum barkers, which will double the capacity of the drum barking plant at Iroquois Falls, Ont. This is but one step in the direction of improving the efficiency of the plant and increasing the output. Like the other newsprint mills, this company has contracted for its whole output for the balance of the year, and if the present market continues, it seems likely to secure a price somewhere in the neighborhood of $130 a ton for newsprint for the first half of next year as compared with $100 a ton for the last half of the present year, and $90 a ton for the first six months. The production of the company is being steadily increased.

Not Party to Canadian Merger

Philip T. Dodge, of New York, president of the International Paper Company, authorized a statement denying reports that his company was a party to a "giant merger of paper and pulp interests in Canada." In his statement, Mr. Dodge said further:

"The International Paper Company is not proposing to part with its mills, their control or the sale of its products.

"In addition to its various newsprint mills in the United States, it is now pushing to completion at Three Rivers, Canada, a mill with a capacity of 240 tons per day. It is expected that this mill will be in operation some time during the summer or fall of 1921."

Timber Berths Bring Good Prices

There was a representative atendance at the sale of New Brunswick timber berths at the crown land office in Fredericton recently. One hundred and nine berths were put up, but for some twenty-five there were no bids. In the majority of cases the berths were sold at upset price, $7 in some cases and more on others. For some berths there was lively competition. Forty-one dollars was the highest buy. It was made by H. M. Young, of Fredericton, for three square miles.

The result of the sale follows:

George W. Upham, Woodstock—No. 2, ten square miles, east of McGivney, $9.50; No. 10, six and a half square miles, east of Covered Bridge, $7.50; No. 7, seven square miles at head of Young's Brook, $7; No. 3, ten square miles, seven miles southeast of McGivney, $7; No. 17, two square miles near Cross Creek, $7.

H. M. Young, Fredericton—No. 5, four square miles on Cain's River, $7; No. 6, five and a half square miles on Cain's River, $7; No. 9, six square miles on Cain's River, $7; No. 12, four square miles on McKenzie Creek, $7; No. 18, two square miles head of Six Mile Brook, Cain's River, $7; No. 19, two square miles, Six Mile Brook, $7; No. 27, two and a half square miles, White Rapids, $7; No. 22, two and a half square miles, south of Dungarvon River, $7.25; No. 23, three square miles, east branch Sabbies River, $41; No. 101, three square miles, Cain's River, near Doaktown road, $15.75.

A. C. Chapman, Moncton—No. 32, four and a half square miles, west of South Forks of Coal Branch, $7; No. 33, two and a half square miles, South Forks, Coal Branch, $7; No. 34, two square miles, head of Coal Branch, $7; No. 36, two and a half square miles, head of Coal Branch, $7.

W. S. Anderson, Burnt Church—No. 4, six and a half square miles, head of Young's Brook, $7.75; No. 13, ten square miles, head north branch Cain's River, $7; No. 15, five square miles, east of McGivney, $7; No. 14, four square miles east of McGivney Junction, $7.

Tenton McCormack, Blackville—No. 20, three square miles, south branch Six Mile Brook, Cain't River, $13.75.

E. A. Blackmoor, Ellington—No. 24, four square miles, south of Crocker's Lake, $7; No. 25, two and a half square miles, northwest of Crocker's Lake, $7.

J. M. Burns, Rexton—No. 29, five square miles, North Forks River, Kent county, $7; No. 30, three square miles, St. Nicholas River, $7.

E. D. Williams, Ford's Mills—No. 31, eight and a half square miles, parishes of St. Marys and Welford, Kent county, $7; No. 37, two and a half square miles, North Forks, Coal Branch, $7; No. 40, two square miles, parish of St. Marys, Kent county, $7; No. 35, eight and a half square miles, Ottis Brook, $7.

B. L. Keswick, Harcourt—No. 38, three square miles, head of Salmon River, $7.

Ernest Vail, Brockway—No. 59, two square miles, western side of Magaguadavic River, $8.

Fraser Companies, Limited, Edmundston—No. 60, six and a half square miles, east of Big Magaguadavic Lake, $8; No. 83, two square miles, south of Southwest Russiagornis River, $9.50; No. 84, two and a half square miles south branch of Hussiagornis River, $7; No. 86, two square miles, Rockwell stream, Oromocto River, $7; No. 87, two and a half square miles, Big Shogomac Lake, $7; No. 97, two square miles, west of Madawaska River, $10.50; No. 63, two square miles, Mud Lake, $8; No. 64, two square miles, Blaney Ridge, $8.

Charles Anderson, McAdam—No. 61, two and a half square miles, Lower Trout Brook, Magaguadavic, $14.50.

L. B. Smith, St. John—No. 62, eight and a half square miles, parish of Dunbarton, Charlotte county, $8; No. 68, two and a half square miles, Digdeguash River, $8.

Bonny River Lumber Co.—No. 65, two square miles, east of Teyon Settlement, Digdeguash River, $8.

Grandville Chase Company—No. 69, eight and a half square miles, Canous River, $8; No. 76, three and a half square miles, St. Croix River, $12,25.

H. F. Dickson, Little Ridgeton—No. 70, four square miles, Canous River, $10.25.

Patrick McMahon, St. Stephen—No. 72, six square miles, Canous River, $8.

Eastern Pulp Company—No. 73, three and a half square miles, St. James, Charlotte county, $8.

Fraser Waugh, Russiagornis—No. 81, two square miles, Three Tree Creek, Sunbury county, $7.

George Mott, Tracey Station—No. 85, five square miles, Porcupine Brook, north branch of Oromocto River, $7.

S. E. Darling, Canterbury—No. 88, two square miles, Eel River, York and Carleton counties, $7.

Horatio Grant, Southampton—No. 89, five and a half square miles, northwest branch of Nackiwick, $7; No. 91, two square miles Little Northwest Nackiwick, $10; No. 92, two square miles, parish of Southampton, $7; No. 94, three and a half square miles, Connell Settlement, $12.50.

H. W. Schofield Co.—No. 93, two square miles, parish of Southampton, $15.

W. C. Albert, Edmundston—No. 96, two square miles, Enoch Baker Lake, $7; No. 105, three square miles, Nadeau Lake, Madawaska county, $7; No. 106, two and a half square miles, Nadeau Lake, Marawaska county, $7; No. 107, three and a half square miles, Nadeau Lake, Madawaska county, $7; No. 107, three and a half square miles, Nadeau Lake, $7; No. 108, two and a half square miles, Nadeau Lake, Madawaska county, $7.

Bamford Brothers—No. 98, three square miles, north of Cains River, $7; No. 99, six square miles, Cains River, $7; No. 100, four and a half square miles, south of Cains River, $7.

United Lumber Company—No. 12, $7.

Charles G. Baird, Chipman—No. 103 and No. 104, $7.

James Taylor, St. John—No. 109, New River, Charlotte county, $7.

Aerial Survey of Timber Wealth

Irvin Proctor of Toronto, president of the Canadian Aero Film Co., Limited, has returned from an extended aerial journey through the northern part of the province. The trip by airplane was made at the request of the Ontario Government in order to get photographs of various parts of the province for forestry and agricultural purposes. The photographs are being displayed at the Canadian National Exhibition. In the journey northward Mr. Proctor, who was accompanied by six men, travelled over Algonquin Park north to the Hudson's Bay and speaks glowingly of the splendid timber which Ontario possesses, particularly in the matter of spruce pulpwood.

Woodworking Plant Making Toys

The Burr Mfg. Co., Orillia, Ont., are working up a nice toy business. This industry was commenced a short while ago on a small scale and is developing fast and gives promises of growing to considerable proportions. The idea behind this new industry is dependable toys for children, that is, toys that will stand up under rough usage. The line consists of rocking horses, see-saws, kindergarten tables and other similar toys, and in addition staple articles like the wooden drums for electric washing machines, and various forms of woodenware are produced. The orders already booked will keep the plant going until next spring. Mr. Burr states that the present quarters are much too small and that he is contemplating moving his plant to another town.

Export Mill on Chilliwack Bench

Situate on Chilliwack Bench, B. C., at an elevation of some 700 feet above the Valley is located one of the most active and up-to-date industrial plants to be found in the district. This, is the National Shingle Mill, operated by Mr. N. G. Blanchfield. As the mill does not market its product locally comparatively little is known of its operations in the district, but by reaching out for and shipping its product to the best markets in America, it is advertising the Chilliwack Valley in Pennsylvania, Southern California and many other distant points in the States where only the finest quality and grade of shingle can demand the market and price.

Erecting his mill only a year ago this month, Mr. Blanchfield has today a model plant employing some 30 odd hand and running to capacity night and day. Situate in the centre of some of the very finest standing cedar obtainable and with some five or six years cut in sight and easily accessible, the mill has been established on a permanent basis. A complete system of skid roads has been constructed to all parts of the timber and, adjoining the mill, a large yarding pond has been created by damming a stream into which the bolts are automatically dumped upon arrival, saving handling and speeding up the work.

The mill itself has three machines and adjoining is a double section dry kiln with a one million capacity and storage and shipping sheds adjoining. The various mill buildings are grouped around with a view to convenience and comfort for the men and safety in case of fire. Electric light, generated in the mill, is carried to every bulding.

Joint Rates Have Gone Into Effect

The order of the Railway Commission authorizing increases in the joint rates on traffic across the international boundary, has gone into effect. This order was made on the application of the American Railway Association, which represented to the Railway Commission that increases had been authorized by the Inter-state Commerce Commission on the United States roads, and that the rates authorized by that body should be made applicable to international joint rates. The order applies to all rates and charges which were increased under the order of the Inter-state Commerce Commission.

Live Wire in the Lumber Arena

U. E. Germain, Bromptonville, Que.

U. E. Germain, managing director of the Brompton Lumber & Mfg. Co., is an aggressive member of the lumber industry of the Province of Quebec. The Brompton Co., although not a year old, has now one of the best-equipped plants of its kind in eastern Canada and employs in its woodworking department at Bromptonville 150 men.

Mr. Germain was educated at Levis College and also took a Forestry course at Harvard and an architectural course in Montreal. He started in the lumber game in 1904 with the Lotbiniere Lumber Co., of which E. W. Tobin is president, as a junior clerk and was transferred to the Duchene mill later on, where he did almost all the light work about the mill from piling shingles to scaling lumber off the trimmers. After filling other important positions with this company, he was transferred to the office of the president at Bromptonville as his private secretary. For some years he was looking after the buying and jobbing end of the business.

In 1907-8 Mr. Germain was cruising with a survey party along the St. Maurice River and Hudson Bay and later on took charge of the making and delivery of a railroad tie contract for the G. T. P. Ten years ago he was called back to headquarters at Bromptonville and joining the staff of the Tobin Mfg. Co. ably discharged the duties of assistant manager. In 1912 he left to inaugurate a business of his own in Montreal, where he was until last fall. He represented Timms, Phillips & Co. for many years and is known as the first lumber salesman to introduce B. C. fir doors, mouldings and finish in Quebec. Mr. Germain's Montreal business is still in full swing under the supervision of Mr. J. Villeneuve.

The subject of this reference devotes all his time to the Brompton Lumber & Mfg. Co., and in his leisure periods—which are few—he is very fond of fishing and hunting, being an angler whom few can surpass. He has captured several prizes for large fish caught at different times. Mr. Germain is a breeder and fancier of hunting dogs and a good wing and trap shot.

Forest Fire Problem in New Brunswick

Writing to a leading paper in the East on the New Brunswick forest fire problem and the difficulty of enforcing laws and regulations, a "Lumberman" says:

The forest fire problem in New Brunswick will always be a most serious and difficult one to deal with. With more than one-half the country in forest or wild lands, traversed by 1,900 miles of railways, with hundreds of portable or small stationary saw mills, with sporting parties traversing game regions, with settlers burning slash without proper care, and with occasional dry seasons, when the dry limbs and fallen timber are as inflamable as tinder and spread fire when ignited with incredible rapidity—these causes combined make the government administration of Crown lands continuously complex and embarrassing. When to these be added the never-relaxing efforts of the combine of lumber operators to force by political influence concessions and secure all they can for the least compensation, it must be conceded the minister who honestly protects the public interests has no sinecure.

The present enactments are the result of long experience and are probably the most perfect the province has ever possessed. Outside authorities claim they are the most up-to-date and efficient of any in any state or province in America. Whether or not that be the case, they are administered with a good deal of energy and with a faithfulness that defies the lumber rings. They were subjected to a severe test during the early part of this season. There was practically no rain-fall from May 15th to June 10th, and the weather was very hot.

The rainfall in May in New Brunswick was less than one-third the average of the past fifteen years. The debris on the ground became dry as tinder, and fires once started spread with great rapidity, and were difficult to control. From enquiries at the Crown Land Office, the writer learns that over five hundred fires occurred; ten very serious fires were caused by carelessness of river drivers, thirteen by smokers, twenty-six by neglectful fishermen, fifty-one by uncontrolled slash fires, and over three hundred from railroads, and the balance from various other preventible causes. The most serious fire was the one which burned the village of St. Quentin, which resulted through the carelessness of one settler who neglected his slash fire. The residents of this settlement lost about $400,000 in this fire. The period was one of extreme fire hazard and the department had crews of men on more than one hundred and fifty fires at one time, and a great deal of damage was avoided by prompt action and by splendid co-operation of the licenses and lumbermen throughout New Brunswick with the Forest Service.

There are over three hundred locomotives operating in the Province of New Brunswick. These locomotives are owned by six different railroads and are repaired at thirty-four different round-houses. All these locomotives must have proper wire nettings in the front end and have tight-closing ash pans, but the nettings have to be frequently renewed, as they are destroyed by the acid in the smoke. The Forest Service, by authority given the inspectors by the Railway Commission, makes periodical inspection to see that the locomotives are kept up to the standard required in this respect. During May one hundred and ten inspections were made and sixty-eight locomotives found with defects, which were promptly remedied when brought to the railway officials' attention.

The railroads, the Deputy Minister of Lands states, never failed to co-operate especially in regard to maintaining fire patrols and extinguishing fires set by them. Over sixty railway patrolmen were maintained following train on either hand speeders or power speeders, or on foot.

During the early part of May over one hundred portable mills were investigated by the forest rangers and thirty-two were found to be operating without taking the necessary precautions required by the fire law. These mills were required to do so, and in five instances the surrounding conditions were so dangerous that these mills were forbidden to operate during the fire season. In most cases the owners took the proper precautions when the danger was pointed out to them.

The licensees of Crown lands, the Minister, Mr. Smith, states, lent splendid aid, they having volunteered the services of about one hundred of their woods superintendents and the wardens and many others as foremen on the large gangs of fire-fighting crews employed.

The staff of nearly five hundred road supervisors employed by Public Works throughout the province again rendered invaluable assistance in acting as fire wardens and foremen on fires.

About one hundred and fifty voluntary fire wardens were appointed and rendered splendid assistance, which was especially appreciated during the very dry period of extreme danger.

The writer learned that the regular staff of the Department, during the fire period, consists of about fifty forest rangers and inspectors and fifty temporary fire wardens, besides lookout men and special patrolmen, making in all about eight hundred men actively interested in fire protection. Admitting that great losses occurred this season, one can speculate as to how much greater would have been the loss if the measures adopted by the government had not been carried out with foresight and energy. The Province of Quebec suffered very severely during the dry spell, and an enormous amount of property was destroyed, notwithstanding all the efforts of the Crown land organization of that province.

Says Lumber Trade is Promising

A recent despatch from Vancouver says: Although the demand upon the lumber industry is not very brisk at present, resulting from the very evident inclination of prospective builders in all parts of the world to hold back until prices and costs come down again, with stocks in practically every part very low and shortage of houses and need of all kinds of buildings becoming very pronounced, the future of the industry is particularly promising, in the opinion of Mr. H. R. MacMillan, of MacMillan & Co., who has just returned from a trip that circled the globe.

Mr. MacMillan left Vancouver and visited Australia and New Zealand, afterwards going to India, where he succeeded in securing an order for British Columbia creosoted ties, to be sent to India somewhat as an experiment. From there he visited Egypt, France and Belgium and afterwards went to England.

"When the demand does open up there will be enormous business offerings," he said. "From the present outlook this demand will make itself evident early next year, for the requirements in many of the large centres for all kinds of large buildings cannot be put off much longer than that. As far as the market opportunities are concerned, they are in almost every country I visited but the same tendency at present to hold back also exists in every country, more particularly so in Great Britain, where all kinds of lumber and other products of the mills are very scarce indeed.

"Once we in this province start out to meet the demand that is coming I believe we will have to work hard to fill the requirements that will pour in from everywhere. This demand is not being felt yet but when it does come it will be very pronounced."

Camp Supplies Still Ascend in Prices

Cost of Logging Keeps Climbing, Wages Go Higher and Men are Restless and Far from Being Efficient

It is always interesting to study the rise and fall of prices, particularly in the supply markets. The variations since the war have been rapid and frequent. In some cases figures have shot up to unprecedented heights and then receded, only to make an upward climb again. In certain other lines values are more stabilized. Just why sugar, potatoes and other allied lines should jump to unheard of altitudes, has been accounted for on many different bases. To enter into an explanation of the contributing causes would be too long a story.

The lumbermen, who have to equip four or five or even more camps each season know how much it costs to feed men today as compared with the moderate outlay before the war. Supplies are not only scarce in many lines but are extremely high. In a few commodities there has been a decrease during the past year, but the number of such items is relatively small.

In each "Camp Number" it has been usual for the "Canada Lumberman" to publish some comparative figures of the cost of leading commodities used in the bush from year to year. A glance over the subjoined table will show that on many articles of food the advance has been 100% and in some cases runs as high as 200% and 300%, since the outbreak of the war in August, 1914. The quotations supplied are those taken from the records of a well-known camp supply firm in Toronto and are approximately what prevail at other eastern centres. Of course, there will be a variation on some items, but a fair average has been taken. With the cost of supplies so high and the wages in the woods at the top-most notch,—and men not nearly as efficient or contented as they were before the war—it is little wonder that lumber has aviated in price.

There are other considerations in the way of the extremely heavy advances in hardware, blankets, graniteware and allied lines. Much more might be said on this question, but the story is one that is realized only too painfully by the operator whether he conducts logging on a large or small scale.

An eastern manager summed up the situation succinctly when he remarked recently to the "Canada Lumberman": "I have long since ceased to be surprised at any advances. I now take them as a matter of course. Every time we buy a few pounds of this or that we are told that it costs so much more and we pay it without complaint or cavil. How long this state of affairs will continue, no one can tell. In these days predictions are practically worth nothing. All prophecies have been upset by the cold logic of events and the force of circumstances. The only thing the lumberman can do is to pay as he goes along and keep smiling. There is no use denouncing things in general, as one is apt to create dissension and discouragement on every side."

Indications are that wages will be higher in the camps this season than they were last year. The prevailing figure in Ontario and Quebec for men of the ordinary type was $60.00 to $65.00 a month and board while a few top-notchers received $70.00. This schedule held all the season. This year the majority of firms are paying $70.00 and $75.00 for woods' labor, and in a few cases $80.00 is handed out to efficient men.

Hay is higher than at this time last year, but some of the lumbermen expect that the price will fall. A recent quotation furnished by a Toronto supply firm is $36.00 per ton, f.o.b. Sudbury, for new hay, while last year at this time the rate was $30.00, but it afterwards went up somewhat. Western oats, bulk, f.o.b. Sudbury, are now $1.00 per bushel, bulk, bags, $1.10; Ontario oats, bulk, 95c; bag, $1.05. At this time last year western oats, bulk, f.o.b. Sudbury, were 96c a bushel and bags $1.06; Ontario oats 95c, bags $1.05. The prices, therefore, are practically the same as a year ago. No new oats are on the market as yet.

Here is a comparative list of the cost of camp supplies in August, 1920, August, 1919, and August, 1914, the latter figures prevailing at the outbreak of the war.

		August 1914	August 1919	August 1920
Barrelled Pork Reg. Mess		26.00	55.00	42.00
Short Cut Back		28.50	64.00	56.00
Clear Fat Back	85/100	24.00	65.00	47.00
	70/85	25.00	67.00	48.00
	50/70	26.00	69.00	49.00
	40/50	26.50	69.00	50.00
	30/40	26 50	70.00	51.00
Bean Pork		24 00	49.00	43.00
S. P. Rolls		26.00	70.00	66.00
Barrelled Beef		28.00	36.00	37.00
		28 00	32.00	32.00
		18.00	30.00	26.00

Apples, (Evaporated)		9-10	.22	.21
Rice (Rangoon)		3-4	.13	.14
Corn Syrup (barrels)		.3½	.8¼	.10

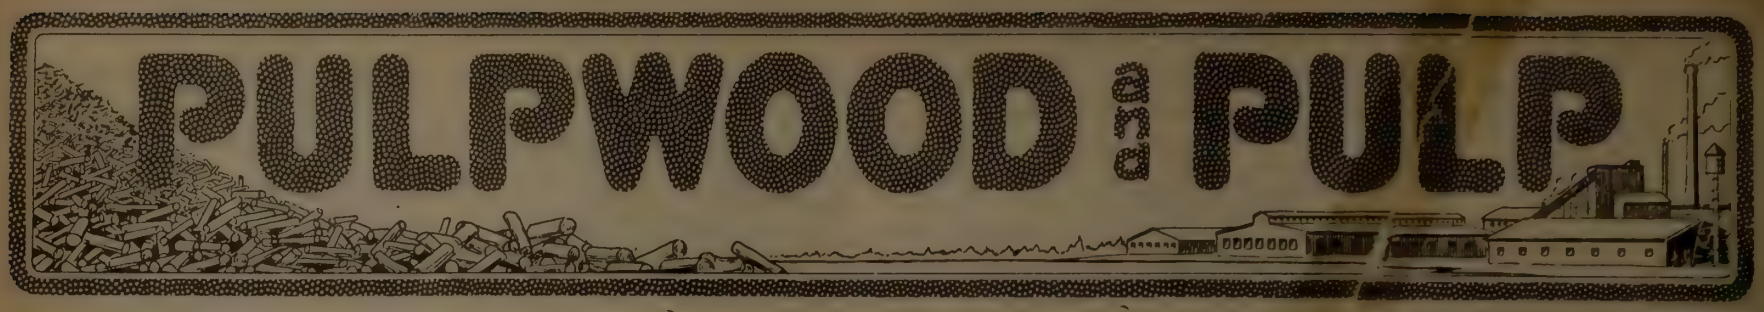
Home Owning Versus Divorces

The contention that home owning makes for good citizenship and higher living ideals is corroborated by a recent study of divorce cases in Chicago, where out of 3577 suits for divorce filed in a recent year only seventy couples owned their homes. In 2,171 cases there were no children.

Records show that in Chicago in 1919 there were 37,583 marriages and between 5,000 and 6,000 divorces, an increase in divorces of 20 per cent. since 1911. The growth of the apartment habit and extravagance are given as two prominent causes for this increase.

The Supreme Value of Time

The International Time Recording Co., Ltd., 57, City Road, Finsbury, London, E.I., Eng., have just issued an informative and profusely illustrated brochure, upon the value of time and time recording.. The old days of long hours and low wages, says the booklet, are gone, probably for ever, and the new era of shorter hours and higher wages must lead in the natural course of events to greater efficiency. And most certainly it means, if employers of labor are to compete in home and foreign markets, they cannot afford to pay for time not received; on the contrary, it is of paramount importance that they check to the minute the times of arrival and departure of their employees.. Never before in history did Time mean so much all the world over as it does today, when nations are striving to balance the economies of the world by production.. The thought of every employer today is how to increase production in spite of the reduced working hours; how to keep costs down with wages ever increasing. The solution to each of these problems is the same, and that is Time—full time for each worker and payment only for time worked. If the hours be 47 per week, let them be 47, and nothing short of 47, and full time for the factory, works, or establishment, of whatever description; if 4,700 hours are the limit of the establishment, let 4,700 be worked, and so keep overhead charges at the lowest. The only way to ensure punctuality is to record automatically the time of employees —check their ingoings and outgoings, so that there is no question of paying for time not received, no question of allowing irregular time-keeping to play havoc with production and cost of production. It makes no difference how employees may be paid—by piecework, on the bonus system, or simply by the hour—the basis of payment first and last is Time.. A man or woman can only do a certain amount of work in a given time; some can do more and some less, and payment by piecework or on the bonus system is a means of encouraging a worker to do the best possible. Such methods are splendid stimulants to production if, and only when, based on Time. It will not profit a manufacturer to help production to fix a piecework rate unless the workers put in full time, and in practice such systems, if worked without count of time, are as liable to reduce the output as to increase it.



Mr. Backus Wants Big Limit

"We came to see the Government about the entire general development of the Kenora district," said Edward Wellington Backus, of the Fort Frances Pulp & Paper Co., Fort Frances, Ont., who was at the Ontario Parliament Buildings recently. "This embraces the municipal power plant and the additional forest products area to justify developments."

Mr. Backus is at the head of large lumber, pulp, paper, power and development companies in the Rainy River section.

"What about the English River timber limit that you want to secure?" Mr. Backus was asked, the question referring to the application for limits of about 2,500 square miles.

"When the Lake of the Woods limit was offered by the Government, we tendered in 1913. We were going to put up a 100-ton pulp mill, and but for the delays due to the then Government, that mill would have been built. The Government told us there were at least 50 years' supply of pulp wood on it, but when our cruisers went through, we found of the 16,000 sq. miles there were less than 500 sq. miles of timber, and only 600,000 to 700,000 cords of pulp on it. Now they want us to put up a 300-ton mill, and the pulp on it will only run it for four years at the most. We are now asking that the English River limit be added to it, and we think that is only fair."

"How much pulp is on that limit?"

"On part of it long stretches have been burned over, but there is enough to last us 30 or 40 years."

"Why do you think you should get that instead of having it put up for tender?"

"It was put up for tender for three months once, and no bids were made for it."

New Pulp Mill at East Angus

The Brompton Pulp & Paper Co. are erecting a new groundwood mill at East Angus, Que., and are installing three Voith grinders. The equipment will be motor-driven throughout and modern in every respect, and it is expected the new plant will be in operation by the middle of February. It will increase the total production of mechanical pulp by 70 tons per day, making the entire output of the company 400 tons daily. The Brompton Pulp & Paper Co. also turn out 120 tons of news a day, 70 tons of boxboard, 90 tons of sulphate pulp and 60 tons of kraft pulp. They report that the markets are being well maintained both in pulpwood and paper and do not expect any material decline in price for raw material for some time to come.

Dryden Pulp Co. Changes Hands

The Dryden Pulp & Paper Co., whose plant is located at Dryden, Ont., has changed hands. It is understood that the new owners will carry out an extensive policy of expansion. The plant has been established a number of years and has a daily capacity of 60 tons air-dry kraft pulp, 15 tons kraft sheathing paper, and 15 tons kraft wrapping paper.

J. B. Beveridge has been vice-president and general manager of the company ever since its conception, and F. N. Beveridge is the general superintendent. It is understood that securities will be placed upon the market by the Montreal interests, who have acquired the plant from the English owners, to the extent of $5,000,000. It is also learned that the English interests have not been ready to provide the necessary capital to develop the plant as it should be during the present activity in the pulp and paper arena, one cause for the delay being the exchange situation. The new Canadian interests will supply this capital, and it was on this assurance that the property changed hands at approximately its pre-war value. The English interests will retain their holding of the $1,500,000 6 per cent. bonds now outstanding.

The Dryden Company holds 1,157 square miles of timber limits adjacent to Lake Wabigoon and Eagle Lake, in the Kenora district of Ontario, between Winnipeg and Port Arthur, containing a large stand of accessible pulpwood. The company's history dates back to before the war, when it was originally formed as a lumber and power concern. It went into liquidation in 1913, at the time when the lumber business went into depression. Additional capital was secured and the company's sulphate mill which was under construction previous to liquidation, was completed.

Under the reorganization the company's capitalization was scaled down to a low figure. The pulp and paper plant was gradually developed out of earnings, and additional timber holdings and power sites secured. The additional powers have been partially developed and the mills, which are laid out for a much larger capacity, have been brought up to present production.

The company's timber limits are adjacent to two lakes of approximately 100 square miles each, which enables them to secure their pulp wood, it is said, at a very low per cord cost of the pulp wood delivered at the mill.

The Dryden output of sulphate pulp goes largely to the paper mills in the Fox River Valley region in Wisconsin and in Minnesota, which, in past years have been running very short of pulp supply. The building paper goes into the chief Western Canadian market, which is the chief market in this country for that product. Kraft paper is sold in Western Canada and throughout the world under the Dryden trade mark. The new company will add 40 tons of ground wood and 50 tons of board to the present output.

Among the directors of the reorganized Dryden enterprise will be included, it is understood: W. A. Black, vice-president and managing director of Ogilvie Flour Mills, and a member of the Abitibi Pulp and Paper Board; J. B. Beveridge, who has for some time been associated in the chief executive capacity of the company; J. N. Greenshields, K.C.; J. H. A. Acer, director of the Laurentide Power Company; Senator Lorne C. Webster and Dan McLachlin, President McLachlin Brothers, Ltd., of Arnprior, Ontario.

Will Develop Important Limits

Negotiations recently concluded in Toronto will result in the formation of the Western Canada Pulp and Paper Company, Limited, to develop important limits in British Columbia.

The new company has acquired a valuable asset in the water power on Rainy River and its holding include a pulp mill with a minimum capacity of 12,000 tons per annum, sawmills, freehold lands, provincial timber license areas, water powers and townsite properties.

The timber limits owned and acquired are estimated to contain over 1,500,000 cords of pulpwood, which should be sufficient to supply the mills for 60 years, operating at a capacity of 40 tons per day.

It is understood that the entire financing of the new company will be carried out in Canada.

The capitalization will include $1,200,000 of 6 p.c. mortgage debenture stock, due February 1st, 1950, and $1,000,000 7 p.m. first mortgage serial gold bonds and 25,000 shares of common stock of no par value.

New Rossing Plant in the North

The Continental Paper & Bag Co. are erecting at Agate, Ont., in the district of Algoma, under the name of the Continental Wood Products Co., Limited, a tumbling plant to look after 25,000 cords of 4 ft. pulpwood per year and a sawmill that will cut approximately 4,000,000 ft. of lumber during the season. The company expect to have the tumbling plant in operation by October 1st, and when completed it will be one of the most up-to-date of its kind in Canada, if not in America. T. G. McLaurin, 211 McGill St., Montreal, is the

Will Put Up Pulp Plant at Masset

Mr. F. L. Buckley of the Masset Timber Co. (1919) who returned from Masset, B. C., lately, states that water measurements are being taken and all plans laid at Masset by his company in preparation for the establishment of a modern pulp plant. English capitalists are behind the venture, Mr. Buckley stated, and without doubt actual building operations on the plant would start next year. He describes the limits at Masset as containing the best pulp wood in the province.

At present 450 men are employed by the company getting out logs, which are marketed with the Prince Rupert Lumber Mills and with the pulp mills in the province. The output is 9,000,000 to 10,000,000 feet per month. The mill at Masset has been closed and, according to Mr. Buckley, is not likely to be re-opened this year.

New Company Will Build Pulp Mill

The Manouan Pulp & Paper Co., Limited, Montreal, have secured control over areas immediately adjoining the Laurentide Co., the Belgo-Canadian Pulp & Paper Co., and the Brown Corporation. These limits are splendidly situated and constitute and make the company among the largest holders of pulpwood lands in the Province of Quebec. The island chutes on the St. Maurice River will be developed by the company, and it is expected the ultimate production will be 38,000 h.p. This point also offers nearly 2,000 acres for a mill site. The company will erect a 100-ton ground work mill and have this in operation by August, 1921.

The new company will have an authorized capital of $5,000,000, and an authorized bond issue of $2,500,000. Of the authorized capital $900,000 of 7% convertible debentures will be issued in the near future. Of the common stock 40,000 shares of a par value of $100,000 will now be issued and the bond issue will be 2,000,000 7% first mortgage gold bonds. A sinking fund sufficient to retire the debentures by maturity will be provided.

The prospective financial position of the company, after its financing has been arranged, would show as follows:

1,380,000 cords spruce and balsam pulpwood at $2.25	$3,105,000
17,000,000 ft. B. M. of pine, at $10	170,000
70,000 cords other pulpwood, at $1	70,000
Power and mill site (38,000 H.P.)	350,000
Mill, power dam and other developments	1,300,000
Cash working capital	316,000
	$5,311,000

A further source of revenue not included in the above, is the sale of surplus power, which can be disposed of as soon as it is installed. After the deduction of $2,000,00 of bonds and $900,000 of debentures, to be presently issued, this would leave a surplus at the above values of over $60 per share on the common stock issue.

Exports of Pulp and Paper Doubled

Exports of Canadian pulp and paper for July, 1920, according to figures compiled by the Dominion Bureau of Statistics, were valued at $16,014,747, as compared with $7,730,162 for the corresponding month a year ago, a gain of $8,284,585 or more than 100 per cent. They were made up as follows:

	1919	1920	Gain
Paper	$4,639,225	$6,877,014	$2,237,789
Chemical pulp	2,654,333	6,608,740	3,954,407
Mech. pulp	436,604	2,528,993	2,092,389
	$7,730,162	$16,014,747	$6,284,585

Paper exports during July included 9,789 cwts, of book paper, valued at $110,596, and 1,219,439 cwts. of newsprint, valued at $5,-727,193. Their destination was:

United Kingdom	$ 425,949
United States	5,535,386
Other countries	915,679

For the first four months of the fiscal year, pulp and paper reached a value of $52,494,052, in 1920, as compared with $27,067,236, in 1919, a gain of $25,426,816. They were greater by $5,972,160 than the total value of such exports in the year 1916-17, up till that time a record.

Details for the four months' period:

	1918	1919	1920
Paper	$14,487,110	$17,532,409	$26,423,454
Chemical pulp	10,518,919	7,903,626	20,118,759
Mech. pulp	1,701,773	1,631,201	5,951,839
Total	$26,707,802	$27,067,236	$52,494,052

For the four months' period of 1920 the paper exports included 24,751 swts. of book paper, valued at $259,886, and 4,906,188 cwts. of newsprint paper, valued at $21,916,549. Their destination was:

United Kingdom	$1,548,102
United States	20,998,774
Other countries	3,876,578

Exports of manufactured pulpwood show an increase in both volume and value both for the month of July and for the four months' period. They were:

July	1919	1920
Cords	122,069	144,741
Value	$1,234,527	$1,545,906

For four months:

	1918	1919	1920
Cords	645,723	328,386	368,851
Value	$6,232,254	$3,260,241	$4,061,376

Remarkable Comeback in Earnings

Spanish River Pulp & Paper Mills furnishes a good illustration of of the thriving condition of the industry in Canada by its annual report for the year ending June 30 last. This company, which was on the verge of a receivership six years ago, when it was reorganized on behalf of the bondholders, has made a remarkable recovery by reason of favorable conditions and management, resulting now in much the best showing of its history. More especially its standing has improved within the past two years, until now the arrears of dividends on preferred stock, amounting to 42 per cent., have been met in one year by an issue of new stock, other debts have been arranged, and the next expected proceeding is action on the common stock.

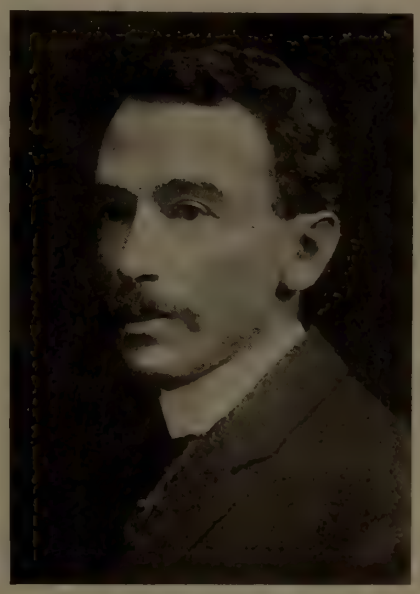
For months the stock market has been agitated over the expected distribution by Spanish and it is likely that the occasion of the annual meeting late this month will be marked by some news of future policy in this connection. The company dates back to 1911, and in the first year the dividend on preferred was 3½ per cent.; in 1912 payment of 8¾ was made, and in 1913, 3½, after which nothing was paid until the wiping out of arrears this year. No dividends have even been paid on common, of which $8,000,000 is outstanding. During the past three years the net income and working capital of the company have been as follows:—

	Net income.	Working cap.
1918	577,575	3,904,409
1919	1,456,921	5,793,884
1920	2,552,069	6.611,068

Quebec's Policy in Pulpwood Matters

Hon. Honore Mercier, Minister of Lands and Forests, in the Province of Quebec, in discussing the opinion expressed by the conference of paper manufacturers and forestry experts just held in New London, N. H., at which some criticism was expressed regarding the policy of Canada in governing the export of pulpwood, said in an interview here:—

"Everybody interested in the welfare of the Province understands the necessity for the Canadian restrictions upon the exportation of pulpwood cut on the public lands. These measures are amply justified and becoming more and more appreciated. I do not think it useful now to enter into a discussion of all that has been said against our policy here in Quebec, concerning pulpwood. But we have had to adopt measures for the conservation of our natural resources and to provide for the future.



Hon. L. A. Taschereau, the new Premier of Quebec

"Following the programme traced by the Hon. Mr. Taschereau, we have decided to send four forestry engineers over to Europe and to Norway and Sweden particularly to study and acquire whatever experience they can from those great forestry and lumbering centres. They will come back with information of the reforestation problems, where climatic conditions are about the same as here. Afterward, we will place them in the department here so that their researches may be of use to us.

"Three aeroplanes will be placed at work at once on our woods for patrolling and exploring work. Hitherto, exploring has been a tremendous expense and a slow process."

Veteran Manufacturer of Lumber

J. H. Dansereau, Montreal

Mr. Joseph Hercule Dansereau is one of the oldest lumber manufacturers in P. Q. He commenced his business career in the lumber trade in 1885 when he operated a sawmill at Vercheres, P. Q. In 1895, Mr. Dansereau built a floating mill, and for two years was located at Calumet, manufacturing lumber from logs purchased on the Red River. From there he transferred his operations to Liuseville, P. Q., where he was engaged for five years in manufacturing lumber in the same mill, the logs coming from the Riviere du Loup district.

Later Mr. Dansereau went to Three Rivers, where he built a sawmill at the mouth of the St. Maurice, the mill having a capacity of 12 million feet per annum. This mill is in operation today Mr. Dansereau also purchased limits upon the St. Maurice. In addition to these, he acquired large limits upon the Jacques Cartier River and built a sawmill with a capacity of 20 million feet per annum at Pont Rouge, County of Portneuf. Last year he disposed of this property to the Donnacona Paper Co., Ltd.

Industrial Alchohol From Wood Waste

The removal by the Government of most of the restrictions on the manufacture of denatured alcohol ought to lead to a great development of chemical and other industries dependent upon it. The Society of Chemical Industry claims that with duty-free alcohol Canada may undertake the manufacture of over 150 chemical compounds in common use here, and that completely denatured alcohol offers a cheap fuel for motors and automobiles.

Owing to Government restrictions which increased the cost the use of alcohol for industrial purposes in Canada hitherto has been limited. Last year the Inland Revenue Department manufactured 643,700 gallons, but Germany in 1917 used 120,000,000 gallons, and the United States in 1918 used over 90,000,000 gallons. The manufacturers of those countries had an enormous advantage, because industrial or denatured alcohol there was freed from thee restrictions which embarrassed Canadians.

So long as there is a world shortage of food the manufacture of alcohol from corn or potatoes will prove expensive to other countries, but Canada has the advantage of being able to use her forests for this purpose. It has been estimated that the sulphite liquor running to waste from the pulp mills on the St. Maurice River would produce annually about 64,000 gallons of alcohol, and that the pulp mills of the whole country would yield about 5,000,000 gallons annually. Moreover, it can be produced from wood waste of sawmills, such as slabs, strips and sawdust, and it is estimated that in British Columbia alone these sources would yield about 50,000,000 gallons a year. Canada is exceptionally favored with the raw material for this chemical product, and ought to be able to manufacture it at a price to compete with the greatest industrial nations of the world.

Retail Dealers May Form Club

There is some talk of forming a retail lumbermen's fishing club and establishing their headquarters on the French River near the Chaudiere Falls. This proposal has been brought about as a result of the visit of the Ontario retailers to that part of the country on their annual outing, and the splendid success with which they met in the angling line. Several ardent disciples of Izaac Walton have mooted the matter, which is now being discussed and may take definite shape before many weeks elapse. There are numerous eligible sites for a club house and headquarters for such an organization, and no more attractive spot could be found.

New Brunswick Yards Are Filled

All reports from the North Shore of New Brunswick and especially from the towns on the Miramichi indicate that the employment problem will be an acute one there this winter. Lumbering is the main industry of that section and offers the only employment to the bulk of the population,

The mill yards all along the river are piled high with lumber, and very little has been shipped this year. Ever since the latter years of the war, this congestion has been developing so that now the big lumber companies are faced with the double problem of getting rid of the surplus on their wharves and of finding piling space for their daily cut. One of the big companies have had only one boat consigned to them so far this year, and it took away 700,000 feet, and that means only three or four days' cut. All the companies are having the same experience, and the result is that the mills have to shut down very shortly.

A further result of the present situation will be that this winter's cut will only be a fraction of that of former years. Two of the largest lumber companies are wintering thousands of the logs cut last year, and one company operating three mills will have only four camps working, and their cut will amount to about ten million feet.

Three Generations in Lumbering Line

The name of Blair is synonymous with the lumber trade of the Province of Quebec. As far as 1831, Robert Blair came to Canada from North Berwick, Scotland, and became the pioneer of the lumber industry in the now famous Saguenay River district, his interest being in connection with what is now known as the firm of Price Brothers & Co., Limited, and other large pulp concerns. Sir William Price when a young man lived in the Blair home, and learned some of his lumber business in the Saguenay locality.

Some years later, (the Blair family having severed their connections on the Saguenay River) the younger members commenced operations on the St. Maurice River, and with old established family relations these operations lasted for about twenty-five years. A few years ago all the business connections there were discontinued so far as the Blairs were concerned. The limits now owned by the Wayagamack Pulp & Paper Co., of Three Rivers, P. Q., were the operating grounds of the firm of Blair Brothers, of Montreal—a name comparatively new to the present generation of lumber dealers, but very familiar to the older members of the trade. Some twenty years ago the firm—now consisting of Messrs. W. B., R. P., H. C., and O. T. Blair—operated under the name of Blair Brothers. The style was changed to Blair & Rolland, Limited, but this has now been again altered to the original form of Blair Brothers.

It is almost unique to find three generations of one family remaining in the same line of business, with the additional feature of the brothers being members of the same company.

Must Fence in Lumber Yards

The problem of lumber piles within the city limits was again to the fore in Ottawa in connection with fencing off the lumber yards of Shepard & Morse in the west end. Some time ago, following the disastrous fire in these yards, Commissioner of Works A. E. Macallum, requested the company to erect fences around the lumber piles. On the company's failure to comply with the request, a charge of non-compliance with the city by-laws was laid against it by the city engineer's department. On the date set for the hearing of the charge the case was adjourned.

Mr. P. C. Walker, of Shepard & Morse, informed the Board of Control that strict compliance with the by-law would put the company out of business as far as the piling of lumber was concerned. The company could not operate if compelled to erect fences in the piling ground area, which is traversed by different streets. Mr. Walker incidentally told the board that if the company was compelled to erect fences along all the streets crossing the piling ground area, it would secure yards elsewhere. The board informed Mr. Walker that the by-law must be observed. Mr. Walker finally assured the board that the company would erect fences.

Ask Him Why He Does Not Proceed

A man is quite interested in building before he takes the trouble to have an estimate figured and in the great majority of cases he is a "live" prospect. This being the case, are we not falling down on our salesmanship when we are unable to close with nearly half of our customers? We would like to know the exact reason why we failed to sell every estimate that was cancelled. This information would enable us to find the weak spot in our selling methods. We have sent out a letter to a number of our yards asking for full information on these estimates that were cancelled. If you received these, we hope you will take great care to answer them as fully as possible. If you are in doubt about any of them, ask the man for whom you figured the estimate, just why he did not go ahead with the building, and report the facts to us.

Having a definite "time of payment" is one arrangement that the yard manager often fails to arrange. He wouldn't forget his dinner, yet the former is by far the more important. Tend to both of them.

New Timber Tariff for Quebec

The Province of Quebec's new tariff for the cutting of timber on Crown lands, which was recently approved by an order-in-council has been made public:

1. On all square lumber or flats:
(a) White pine, oak, carya and walnut, 15 cents per cubic foot.
(b) Red pine, elm, ash, cedar, whitewood or linden, wild cherry, maple and tamarac, 12 cents per cubic foot.
(c) Fir and North American fir, grey pine or cypress, spruce, birch, aspen and poplar, 10 cents per cubic foot.
2. Sawed logs or bark and large timbers and rough, heavy timber:
(a) White pine, oak, carya and walnut, $5 per 1,000 feet.
(b) Red pine, elm, ash, whitewood or linden, wild cherry, maple and tamarac, $3.50 per 1,000 feet.
(c) Fir, North American fir, grey pine or cypress, spruce, birch, aspen, poplar or cedar, $2.70 per 1,000 feet.
3. Poles of more than 18 feet and not exceeding 10 inches in diameter at the thin end:
(a) 30 feet or less in length, 75 cents each.
(b) 30 to 40 feet, $1.50 each.
(c) 40 to 50 feet, $3 each.
4. Railway ties of not more than nine feet, 15 cents each.
5. Other articles of value, 15 per cent. ad valorem.

Mannchester Firm Opens Offices in Midland

Mr. G. Mason, of Manchester, England, accompanied by E. H. Cookson, his secretary, was in Montreal recently en route to Midland, Ont., in connection with a big deal put through by his company in March last, involving the purchase of 25 million feet of lumber from the Manley Chew saw mill, representing an investment of over one million dollars.

Mr. Mason intimated that the purpose of his present trip is to make forwarding arrangements to have the lumber, as it is put through the mill, forwarded to the company's distributing yards in Manchester, where they have large storing ground and shed space, adjacent to the ship canal, and possessing railway communication. During the past four years, through the war period, the company was debarred from purchasing timber in Canada, owing to an embargo of the British Government which sought to conserve tonnage. With a very large demand for timber supplies which is prevalent throughout Great Britain, for engineering and shipbuilding purposes, Mr. Mason was led to make the deal he is now marshalling, and as he put it, in conversation lately, his company is open to purchase all the white pine timber they can get in Quebec and Ontario and elsewhere in the Dominion of Canada.

The timber, as it is cut for the company's purposes, is fashioned into boards and deals and is sold in that way. The Midland mill has a capacity of about 50 million feet a year, and it is estimated that the timber supply that is tributary to it is good for about fifty years. Mr. Mason agreed that some adequate system of forest husbandry and re-forestation, was well worthy of scientific investigation in these provinces, and commented upon the move being made, in this connection by the Quebec provincial government, as being in line with statesmanship.

At Midland, the company, which is known as G. Mason and Co., Ltd., has established offices, with Major G. L. Main, of Galt, in charge, for the purpose of looking after their present investment, and to negotiate any further purchases of timber which they may be able to make in this part of the country. Mr. Main, who served in the air force in England during the war, has had a very considerable experience in Canadian lumber.

Speaking generally of Manchester, Mr.Mason said that it was the largest cotton spinning centre in the world, there being hundreds of mills in Lancashire. He says that, if labor troubles were eliminated, there is much work throughout Great Britain and that the country might witness an era of real prosperity.

New Western Door Company Formed

Canadian Western Door Co., Limited, Mission City, B.C., has been recently organized with a capital of $25,000, to manufacture sash and doors. The company will establish a large sash and door factory in Mission City, with a capacity of about 1,000 doors per day. The factory building will be 70 x 400'. Two dry kilns will be constructed with a drying capacity of 36,000' a day. The plant, when completed, is expected to cost in the neighborhood of $135,000, and employment will be given to about 75 hands, the monthly pay-roll amounting to $10,000. The site consists of 5½ acres and adjoins the C. P. R. on one side and the Fraser River on the other, thus giving both rail and water transportation. The officers of this company are: C C. Pierce, president; R. L. Gallinger, vice-president and manager, and R. B. Pirie, secretary-treasurer. Mr. Gallinger is thoroughly conversant with the sash and door business, having had about twenty years experience at the business. Mr. Pierce is vice-president and manager of the Home Savings & Loan Association of Seattle, while Mr. Pirie is a chartered accountant of wide experience. The company has been assured by several leading export companies of Vancouver of sufficient business to take care of their entire output.

Britain Getting More Western Timber

Britain is getting considerably more lumber from British Columbia, according to Sir Douglas Cameron, who recently spent a few days in Winnipeg. Larger shipments of Pacific Coast lumber are also being made to Japan and to Australia.

In earlier years, and especially in the war period, vessels were not always available for this export trade. This condition has now been improved and much lumber is going forward to these and other foreign countries.

Regarding the price of lumber, Sir Douglas said that it was about as it was a year ago. At one point during the year he said buyers from the United States were offering any price for lumber, but this condition did not last long, and the amount which was sold at these inflated quotations was not large. Two months ago a slump occurred but this condition had also passed.

With reference to the supply of lumber on the Canadian coast, Sir Douglas said that it was less than it was in January, and that it was not increasing. His own company has recently increased its logging facilities on limits on the lower mainland by building a railway and additional cutting will be done this fall and winter.

Wooden Steamer is Complete Wreck

The Mary Anne McGregor ran onto the Mississauga Reef coming into Blind River harbor lately and is a complete wreck. The entire bottom of the boat was ripped,, and a fire which resulted completely enveloped her upper works and interior. Captain Geo. Forrest and the crew of sixteen took to their own boats and landed at Meldrum Bay lighthouse, whence a tugboat brought them to Blind River. Forrest could assign no reason for the fire breaking out.

The McGregor was bound down from Duluth with a cargo of salt, and was coming into Blind River with her tow, the Thomas Gawn, for a cargo of lumber. The Gawn's line was parted when the McGregor ran on the reef.

The Mary Anne McGregor was a wooden boat of 1,000 tons capacity, 179 feet keel, 32 feet 6 inches beam, built in 1889, and owned by the Potter-Teare Transit Co. of Cleveland, Ohio.

Good Record of Laurentide Company

Much interest is being centred in the forthcoming annual meeting of the Laurentide Co., Grand Mere, when the annual statement for the past year ended June 30th, will be presented. It is understood that there will be a fair increase shown in the earnings and that shareholders should not look for any such profits as the company is making at the present time and will probably make for the next year. The price under which the mill was operated in newsprint for the twelve months included $80.00 a ton for the latter part of 1919 and $90.00 a ton for the export for the first half of 1920, with only $80.00 a ton for Canadian paper. This compares with the present price of $110.00 a ton for the quarter ending September 30th, 1920, and $130.00 a ton for the last quarter of the present year or $50.00 and $40.00 respectively more than was obtained during the portion of the year that will be included in the report. A good deal of buying of the stock for investment purposes is reported and there have been several rumors afloat, one to the effect that English capital was likely to acquire a large interest in the business. This should not be regarded as at all probable owing to the unfavorable exchange rate. While there is talk of an increased dividend being declared, it was pointed out that this is hardly likely this year owing to the company having to provide for heavy expenditures for its new paper machines. A high dividend is by no means assured this year.

Need Railways to Get Out Pulpwood

Pulp resources in northeastern Manitoba will remain undeveloped until means of transportation are established, F. H. Herchmer, inspector of Dominion forest reserves, said on his return from a forest inspection trip in the district northeast of Norway House. He reports a good quality of spruce is found which would make excellent pulp, but there is no outlet for the finished product, the rivers being unnavigable except by canoe.

Never argue with a customer. Discuss with him, if necessary, but never argue. You just rile him up by arguing. You never convince him, and you may lose his trade.

A Progressive Eastern Lumberman

C. B. Graddon, Montreal

Charles B. Graddon, president of the Graddon Lumber Co., Limited, Montreal, has been in business for himself for the past fourteen years and is well known to the industry. He was born in Quebec in May, 1858, and is a son of the late Charles Stuart Graddon. He was educated at the Quebec High School and secured his first acquaintance with the lumber business by entering the employ of W. & J. Sharples and later with Henry Fry & Co. of Quebec. From 1881 to 1883 he was engaged with a party in laying out townships in western Canada and then returned east. In 1884 he represented Bryant, Powis & Bryant and later McArthur Bros. He next went with E. H. Lemay, Montreal, with whom he remained eleven years, after which he organized the Graddon Lumber Co., Limited, 11 St. Sacrament Street.

Mr. Graddon resides at 6337 St. Claire Avenue, Ahuntsic, is a member of the Montreal Board of Trade, and his chief recreations are hunting and fishing. His son, Chas. P. Graddon, is vice-president of the company.

Who Will Get the Money

We were trying to figure up our sales the other day and on the theory that a sale is not made until the money is collected, we find that our sales for the year are pretty small, but we look for wonderful improvement in this respect the next three months, says an Eastern States lumber organization.

If you had to face the banker for a loan every few days, you would realize just how tight the money market is, and see the necessity for extraordinary collection efforts this fall. It is absolutely imperative that we get the money due us and get it early. The Federal Reserve Bank sent a letter to its member banks the first of August telling them not to make any more loans and to collect the money due them when the present loan matured.

The men who owe you money probably are indebted to the banks as well as to ourselves, and the banks are going after their money as hard as they can, and it is up to every one of us to see that the banks do not get all the money and leave us out in the cold. We must reduce our indebtedness. Our creditors are going to insist upon it and we must comply. We have never had to borrow as much money as we did this year, as it takes twice as much to operate a yard as it did four or five years ago, and not since 1907 has money been so hard to get or the interest rates so high.

Make your plans right now so you will be ready to begin an aggressive collection campaign about the middle of September and keep it up until every dollar outstanding has been collected. Go through your ledger and bills receivable book and make a notation after each man's name showing how his crop is, when he will thresh, whether he will be able to settle in full and if he has other means of paying besides his crop.

With this information in your possession, you will be able to handle every account in an intelligent manner and you will be sure that you are getting your full share of the money coming to you. You can't expect to keep this information correctly if you depend upon your memory for it, especially if you have one hundred or more notes and accounts due you. Whenever you get an opportunity to talk to your debtors, ask them about their crops and also about their neighbors' crops, make a note of this information on your ledger or in your bills receivable books as soon as you get an opportunity. We may ask you for this information a little later in the fall.

New Quarters for St. Louis Lumbermen

The Lumbermen's Exchange of St. Louis will remove in a few days to quarters in the Statler Hotel. The suite will be on the first floor, above the mezzanine floor.

Arrangements have also been made for all the privileges of the hotel to be extended to members and guests. Henceforth, the Statler Hotel will be a real community lumber centre and the fullest cooperation of all lumbermen is solicited in order that a great revival of interest in lumber matters, and in the Lumbermen's Exchange of St. Louis, may be the outgrowth of this plan of activity.

Members and visiting lumbermen from outside St. Louis, and all lumbermen in St. Louis, whether members of the Exchange or not, are cordially invited to avail themselves of this service.

Arrangements have been made for tables in the main dining room and also in the cafeteria as may be needed for groups that may desire such service at popular rates. Monthly meetings of the Exchange as a body will also be held with the finest speakers available. The social features of the old Lumbermen's Club will be revived.

Delightful Function Held at Kent House

The head office staff of Price Bros., Limited, Quebec, were recently entertained at Kent House, Montmorency Falls, by C. E. Kennedy, a widely-known lumberman of New York city. Mr. Kennedy proved to be an ideal host. The gathering was a highly enjoyable one and Mr Kennedy's chief regret was that it was not winter, in order that he might invite the various organizations, because anything that he undertakes is always carried out unusually well. He would have been much happier had all the "Price boys" been there instead of only the members of the Quebec office staff.

Kent House has been the scene of many delightful social functions and among them was the one last February tendered the delegates of the Canadian Lumbermen's Association and their wives by the lumbermen of Quebec city. The location of this quaint and historic hotel is an admirable one and the recent fete, under Mr. Kennedy's directions, was but another of the many brilliant social affairs for which this picturesque place of entertainment has proved a splendid setting.

Included in the party, which numbered between sixty or seventy, were Mr. and Mrs. Arthur Price, Mr. Fred Price, Mr. J. Leonard Apedaile, general manager of Price Bros., Ltd., Mr Alex. Morrison, Mr. Blair, Lieut.-Col. Ray, the latter acting as master of ceremonies, and Mr. C. E. Martin, of the firm of C. E. Kennedy.

A special car was provided for the guests, who included both ladies and gentlemen. On the arrival of the party they were immediately directed to the ball room, where dancing was indulged in, and between each dance a further musical entertainment was provided. Amongst those taking part being Miss Clara Amy, who rendered several pleasing vocal solos; Mr. Geo. Staton, accompanied by Mr. H. Gordon Perry, sang some well-known songs, and the host, Mr. Kennedy, proved a real artist in soft shoe dancing, as well as an elocutionist of the first class.

At the dance intermission the company adjourned to the supper room, where a delightful repast was served, under the supervision of the manager, Mr. Bertani, which was much enjoyed.

Before returning to the dance room, Mr. J. Leonard Apedaile, in the course of an appropriate, though short spech, proposed the health of Mr. Kennedy, and in so doing, referred to the part that that gentleman had proved himself a worthy son of the sod from which he had sprung, by the hospitality he had extended to the staff of Price Bros., Ltd. The toast was duly honored, and in reply Mr. Kennedy remarked that it afforded him great pleasure to see so many of the staff present and particularly so many ladies, and he would always look back on the event with pleasant recollections.

Pearce Company Saved Their Mill

As announced in the last edition of the "Canada Lumberman," fire last month destroyed the planing mill, dry kilns, lumber sheds, office and entire contents of the Pearce Co., Limited, of Marmora, Ont. The loss is between $20,000 and $25,000 above the insurance. F S. Pearce, manager of the company, states that by dint of hard work they managed to save the flour mill, lumber shed, stables and houses in the vicinity of the flames. Fortunately no damage was done to the lumber yards or the sawmill which is sawing steadily and will be kept running until cold weather sets in. The matter of installing new planing mill equipment will be decided upon by the company in the near future.

The Pearce Company report that they have had considerable difficulty this year in connection with the low water on the drives and also in obtaining an adequate supply of labor. They believe that if selling quotations are based on production costs, there is not much prospect of lower prices for lumber this season.

Peat, long used in Great Britain and Ireland as a substitute for coal, now gives considerable promise of taking the place of wood pulp for the manufacture of paper. Experiments recently conducted in Manchester, England, demonstrated the possibility of making a usable grade of newsprint from bleached peat, pulp, and the inventor displayed samples of other papers of various tints suitable for wall papers, wallboard, wrapping paper, etc. For better grades of stock, it is proposed to mix the peat pulp with wood pulp, thereby reducing the consumption of the latter. The coarse roots removed from the peat have a by-product value for brush making.—Popular Mechanics.

Review of Current Trade Conditions

Ontario and the East

The chief topic of conversation in lumber circles has been the jump in freight rates which has been authorized by the Board of Railway Commissioners of Canada. This theme has taken precedence over all others and many expressions of opinion are heard regarding the wisdom and justice of such a move. The conservative, middle-course lumberman, who quietly views things, looks seriously as he remarks "When is all this going to end? Are railway employees to be given an advance every time they ask for one, and are operating companies going to be allowed to pass on all extra levies to the consuming public, add constantly to the cost of living, and incidentally disrupt the general business of the country?"

Business in the lumber line is quiet at the present time in practically every kind of wood. Buyers are holding aloof, mills are viewing the future with some degree of uncertainty, operating concerns intend to cut down the number of their camps, and there is a sort of mark time feeling existing in all ranks, from the logger right through to the retailer. It was expected with the gratifying yield in the agricultural districts, in both eastern and western Canada that a good deal of fall building would be done and that the dull period of the last two months would be superceded by one of considerable activity and expansion. Now an increase of 40 per cent. in freight rates has gone into effect in the east and 35 per cent. in the west, with the result that if there was a tendency on the part of the lumber industry to revive, a move in this direction has been retarded by the new exactions on the part of the transportation companies.

Many concerns in the east, and more particularly those in the west, are complaining of shortage of cars and inability to make shipments. It is predicted that after September 13th there will be more cars available as when a sharp advance in carrying charges goes into force, as soon as the date of the increase arrives, cars seem to appear from many unexpected quarters. Until the new rates are applicable, there is always a dearth of rolling stock.

The sky-rocket rates will add considerably to the cost of western stock delivered at Ontario points. Heretofore the rate from Vancouver to Toronto has been 77c per 100 lbs., and under the new schedule the charge will be 1.05.05 or an elevation of 28c. The extra imposition means in round numbers that all purchasers of Coast stock will have to pay 50c per M. for carrying charges on shingles, $10.00 on timbers, $7.00 per M on boards, shiplap and dimension, and $5.00 to $6.00 per M on ceiling, flooring and interior trim. Under the old tariff, the carrying charge on forest products from Vancouver to Port Arthur was 55 cents. This has been augmented by 35 per cent., which makes the new figure over 74c. The old charge from Port Arthur to Toronto was 22c and the advance 40 per cent. means nearly 31c per 100 lbs. The combined levy is, therefore, $1.05.05 as against 77c. It is true that many protests are being entered against the mandate of the Railway Board but whether these will have any perceptible effect, remains to be seen.

The judgment of the Commission is not yet fully realized, and it is stated that the increase granted is only effective to December 31st, after which in eastern Canada the increase will be reduced from 40 per cent. to 35 per cent. and in western Canada from 35 per cent. to 30 per cent. A reduction of 5 per cent., however, will make but little difference in the ultimate cost of lumber.

Now the question arises,—who is going to assume the fresh burden? The wholesaler says he cannot afford to do so at the present prices of lumber, and in connection with western stuff where the new toll will be felt the heaviest, lumber manufacturers assert that owing to the high cost of logs, labor and general operating expenses, they cannot take any less money for their output, keep their plants in operation and at the same time make ends meet. Naturally the new rates fall heaviest upon large products, such as cars of lumber, and it looks as if building operations, which have been temporarily halted in several centres, will not gain any momentum this fall. Lumber operators are putting in camps but in view of the general situation, there is a tendency toward cutting down the number of men in the bush.

Wholesale firms report business as quiet, and many travellers find it difficult to interest customers in stocks. There is a disposition to play the part of a looker-on, as far as the retail trade is concerned, in the belief that lumber values have about reached their peak. Any buying that is under way is for immediate requirements. Probably after the harvest, there will be some stir in various centres as housing accommodation was never so limited as at the present juncture, and the scarcity of dwellings is being accentuated on all sides with the return of families from summer resorts and the country to reside in the towns and cities for the winter.

White pine is fairly active and is holding its own, but hemlock is weaker and quotations have softened somewhat. Spruce is fairly firm. White pine lath are scarce and in good demand, but hemlock lath are plentiful and difficult to dispose of. There are very few cars of shingles in transit and prices are quite uniform. A steady business is being done in the shingle line.

The whole lumber situation at the present period may be described as being in a transitory condition. This not only applies to Ontario but all parts of the Dominion, and while there is no note of pessimism or alarm, there is a tendency on the part of mills,, wholesalers and retailers to wonder what will happen next, and not to enter upon any large expenditures or incur greater obligations than seem advisable during the present period. Industries in all other lines are reducing the extent of their output and seeking to keep stocks as low as possible. The lumber arena is no exception to this rule. Shipments in the east across seas have been slow and the demand from over the border has fallen off considerably. Owing to these deterrent factors and the abnormal jump in freight rates, there is every indication that the quietness which has prevailed for the past two months will not be materially altered during September, at any rate.

United States

General conditions in the lumber line remain practically unchanged with the exception that prices have softened in a good many instances. The recent increase in freight rates has also been a disturbing factor and has tended to restrict business. Hardwoods continue in slack demand with wide ranges in prices and a tendency towards further decline. The industry on the whole is feeling the adverse effects of the recent jump in the cost of transportation. Even in the south, which it was expected would profit greatly by the much higher delivery costs of western lumber, the number of new orders received by the southern pine mills was way below the figures of the weeks before the new rates became effective. The west coast manufacturers are feeling the advance still more keenly. They are booking only a fraction of the normal amount of new business, and there is no way of knowing when there will be a turn for the better. Mill men are convinced that there must come a readjustment of rates which will put the western mills back on the relative basis which existed before the freight rate advance, or nearly so. Just now their business affairs are in chaos. They seem to be debating whether they shall endeavor to retain their old markets by absorbing the increased freight, or pass the whole of it along to the buyers. The former course involves a sacrifice of profits. If the demand should develop to such proportions as to enable them to maintain recent prices they might be able to absorb a part of the freight increase; but the market tendency has been downward for some time, and if anything like normal times return, they will be up against a wall which they cannot penetrate beyond limits which will not admit of an output for all their products. And, with demand at the present low ebb and the prospects none too good for a revival of business this fall, there is no chance for them to pass the increased delivery cost along.

Following a pronounced lull that accompanied the effective date of increased freight rates, demand for yellow pine has recovered somewhat, but the market remains quiet with the volume of business only fair. The barometer reflects the sharp falling off in orders incident to the freight advance the booking of new orders being smaller than in any weekly period this year. Shipments also declined, as compared with recent weeks. On the whole, though, a good basis for stability in the market is evident in the heavy file of unshipped orders, the car shortage remaining as a check on any tendency to flood the market.

Generally, manufacturers and wholesalers have added the freight advance to their prices and it is probable that 80 to 90 per cent. of the new business booked for mill shipment includes the freight advances.

The hemlock market is slow, though broadly speaking prices hold firm. There are exceptions to the general statement, but they are

Second Hand Machinery & Equipment Wanted & For Sale

Quick Action Section

Special Lots Of Lumber—Positions Wanted & Vacant

Lumber Wanted

Hemlock Bark Wanted in Large Quantities

Quote price and state amount you can supply. Address Box 356, Canada Lumberman, Toronto, Ontario. 17-18

Wanted

A few cars of Birch No. 1 Common and Better, 4/4 to 16/4. Name us your best price delivered here, on grades.

WARREN ROSS LUMBER CO.,
18tf Jamestown, N.Y.

Wanted

We need immense quantity piling, Oak, Tamarack, Fir, Spruce and Long Leaf Yellow Pine, usual quality 12 in. to 14 in. at butt, 6 in. to 10 in. at top; 62 to 70 ft. long, averaging 65. Advise quickly what can furnish, when can ship and price delivered Buffalo, N. Y. All bills discounted. Address Drawer 507, Cumberland, Md. 17-18

PULPWOOD

We are open to purchase peeled Spruce and Balsam Pulpwood in carload lots. Quotations furnished on request. Also Deal ends.

The Jost Company, Limited,
285 Beaver Hall Hill,
1-t.f. Montreal, P.Q.

Wanted

We want to buy 2 x 2 20" Clear Birch squares. If you can cut Maple and Birch furniture dimension stock we should like to communicate with you.

MARK CUMMINGS LUMBER Co.
388 Ellicott Square,
17-18 Buffalo, N. Y.

WANTED

White Pine Spruce

ALL GRADES.

Also LATH of all grades

JOHN F. BURKE,
2-t.f. Aeolian Bldg., New York City.

White Pine Wanted

One car or more each of:

1 x 10" x 16'
1¼" x 10" x 12 to 16'
2" x 12" x 16'
1¼" x 8" x 12 to 16'
1¼" x 12" x 12 to 16'
1" x 12" x 16'

in best grade you can furnish, which please describe in your offer.

G. ELIAS & BRO. INC.,
15-18 Buffalo, N. Y.

Pulp Wood

We are prepared to buy unlimited quantities of peeled poplar and hemlock and peeled or unpeeled spruce and balsam pulpwood.

ADVANCES MADE

Thompson & Heyland Lumber Company, Limited,
12-t.f. 123 Bay St., Toronto.

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 25 cents per agate line (14 agate lines make one inch). $3.50 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Saw Mill Plant For Sale

Practically new and modern Saw Mill Plant, capacity about 30 Million feet per annum, located in the Interior of British Columbia on a beautiful inland lake and on the main line of the Grand Trunk Pacific Railway. About 500 Million feet of timber on and adjacent to Lake (about 90% Spruce) and another Billion feet available at reasonable prices. Natural conditions ideal for economical logging, manufacturing, piling and shipping. An advantage of about $4 per thousand feet in freight rates to the Prairie Provinces over Coast shipments.

This property offers unlimited possibilities as a lumber, pulp and paper property. Would consider selling a half interest. Terms reasonable.

A C. FROST COMPANY,
165 Broadway
5-t.f. New York City.

Miscellaneous

For Sale

25 Lumbermen's Trucks and Wagons, 100 sets Logging Sleighs. All new.

ALEXANDER BARR,
16-19 Pembroke, Ontario.

The Mirage of Lower Prices

A good many retail lumber dealers have followed the mirage of lower prices off into the desert of depleted stocks and have allowed their trade to drop away. We know a good many dealers who have actually advised their customers not to build, but to wait for lower prices. This is the height of business folly. It is poor business for the lumber dealer and bad for his community. Money is a liquid and unstable thing. The time for any man to build is when he has the money! Ninety-five per cent. of the money made in your community will be spent at once. If it is not spent for houses and barns, it will go for automobiles. If it is not spent for cribs and granaries, it will resolve itself into trips to pleasure resorts. If it is not spent for fences and sheds, it will be invested in imaginary oil or fictitious gold mines. It will be spent. Let that sink into your mind and decide whether your community will be permanently better off if it is spent for permanent improvements or for evanescent pleasures.

We know a lumberman—an intelligent retailer, too—who is an officer and a director in a bank. The directors wished to build a bank building this year, but he counselled them to wait for lower prices which were due to come some time in the future. Gentlemen, when the lower prices come no building will be built; let this ramble through your brain—when prices are low people do not build. Low prices and poor business walk hand in hand in the lumber business. When lumber prices are lowfi other prices will be low and people will not have the money with which to take advantake of conditions. Look back over your periods of active business and see whether you ever sold a lot of lumber when prices were low. It is to the retailers interest to encourage business now—not next year, and it is to the interest of his community.

And just a word as to present prices. Many dealers think lumberprices are too high. This is a common fallacy. Lumber prices are lower today than they should be. They are lower than they are going to be a little later. At present prices the manufacturer cannot make a reasonable profit. You may not believe it, but it is true. No industry can flourish unless all branches are making a reasonable profit. The manufacturer, the wholesaler, the retailer, all must be allowed to live if any one of the three is to prosper.

The retail lumber dealer who wishes for a return to the old price level is unconsciously wishing for demoralization, hard times, slack business, and trouble. There is more complaint to the retailer about prices when he is selling at cost than when he is making a living profit. If you do not believe it pick a fight with your competitor and figure a few bills at actual cost. He will probably go below you and your customer will think your are trying to rob him.

Just buck up and tell the world that lumber prices are not as high as they should be. That now is the time to build and do your share o fthe business while your community has the money. If you think lumber prices are high, just set out a crop of trees and wait for the harvest. Lumber is one of the few crops that is being sold as far less than the cost of replacement. You may figure what it costs to grow a bushel of wheat, but sit down with your pencil and fifgure what it costs to grow and produce a thousand ft. of lumber. Prices high? Lumber is the cheapest thing in the world today.—Turned, Dennis & Lowry Lumber Co., Kansas City, Mo., in Wood Construction.

MacLean REPORTS

not of sufficient importance to affect the market as a whole. Inquiries are a little better than recently, but are not brisk. In the North the paper mills are going to pay the highest price ever paid for hemlock logs this winter, and this undoubtedly will shorten the supply available for lumber.

The most encouraging feature of the hardwood market is the heavy inquiry from railroad sources, this inquiry largely being for special cuttings. There is also some demand from industrial sources, especially for special cuttings. Business has been very light this week, following the increase in freight rates. Buying is almost wholly for immediate requirements and those buyers who could anticipate their requirements for a few weeks in advance did everything possible to place orders for stock before the increase in freight rates went into effect, and this in no small measure accounts for the present slowness of the market. Cars are very scarce in the South and stocks are still low, while in some of the southern producing regions the market seems to be more active than in the North. In the northern manufacturing districts inquiries have increased somewhat in volume and stocks on hand at the mills are fairly large, being, broadly speaking, about double those carried when the year opened.

Great Britain

There are no distinct features in connection with the general situation, and there has been a moderate consumption. In reviewing the situation, one authority says it has been evident for a long time that the British market could not digest more goods at present, and just now it is only special sizes and qualities that are needed from abroad.

The prices which importers can obtain for average-quality wood have only recently become profitable, owing to the heavy reduction in freights, and as there is still enough average-quality wood in the country, fresh business is postponed until there is an immediate prospect of turning over the goods. But although for such reasons as slow consumption and financial stringency there would in any case have been an absence of many fresh contracts, yet the feeling of uncertainty which has prevailed regarding our Russian policy has contributed much towards keeping the market quiet.

In regard to the trade at Liverpool, business generally remains quiet, but firm, and the volume of business passing through has been small owing to a slow demand. Values are inclined to weaken a little, although for certain grades of lumber prices are fully maintained. The American rate of exchange continues low, and while working costs keep up there is no prospect of any material decline in values.

At the same time, it is very difficult to predict the future trend of the market, because if the autumn demand for timber of all descriptions should find stocks insufficient to supply requirements, the probability is that values will again increase considerably. On the other hand, stocks are now ample to meet ordinary needs, and the general opinion is that prices will certainly not fall much lower on account of the high costs of freight and production charges. Many shippers are now trying to obtain business through cutting their prices a little, but immediately trade begins to revive, then the market will move up again in sympathy with the increasing demand.

In American hardwoods there is no change to report in the market conditions. Prices continue firm, although there is a tendency in some quarters to reduce values a little in order to facilitate business. Trade is, unfortunately, very slow, even for this holiday period of the year, and there seems to be no prospect of any revival for a month or two to come, at any rate.

In speaking of the law of supply and demand, a recent edition of "Timber" says: The lack of cohesion in the American lumber industry has led to the neglect of the law of supply and demand, and though the industry is at present prosperous, it shows disturbing indications of instability. Strong individualism has dominated it, and in a very un-American way it has been slow at developing common ideas about its products. In connection with timber, there is a difficulty, nonexistent in the case of the iron and steel and other industries, in assembling the raw material at a few centres where manufacture may be concentrated, and this fact impedes co-ordination.

The lumber industry in the Pacific Northwest and in the South labors under a heavy handicap in the burden of timberland investments. Toward the end of the last century lavish gifts of public lands and a vague system of land legislation permitted the spread of private ownership, resulting in a rapid and extensive capitalization of stumpare, largely with borrowed funds. The effect has been that the cutting of lumber has been governed in an increasing degree by financial considerations rather than by the demands of the market, and the evil of over-production has been promoted.

Violent fluctuations in output and prices have been produced by the non-adjustment of supply and demand and the general lack of cooperation. The competition between different regions and between mills in the same region is destructive, as the lumber industry is capable of an output of at least 50 per cent. greater than its present one, which would represent about twice the present consumption.

The great difficulty in getting a sufficient supply of suitable wood for sleepers is forcing importers to look well ahead, and large enquiries are now on the market for 1921. The free-on-board price for sawn sleepers in Sweden is quoted variously, but seven or eight kronor per piece is the figure many shippers are asking; it is, however, difficult to get any quantity for prompt delivery. It is interesting to note that efforts are being made to revive this business with the ports in the Baltic provinces whence sleepers used to be shipped in large quantities; but it must be a long time before big quantities are available. The demand for sleepers is always expanding. There will be an enormous demand in Russia as soon as settled conditions are restored; in Sweden also very extensive operations are in progress for the improvement of the railway system, and there is already a heavy demand in that country for all the sleepers which can be produced. How the world demand, therefore, will be supplied is a problem which it is not easy to solve. Other woods than pine and fir will probably have to be extensively used, and possibly with the increasing cost of wooden sleepers substitutes will be found. It seems clear that it is not too early for importers to book up their requirements for next year if they can do so.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Quebec Shipments Show Some Falling Off

The demand for timber and sawn lumber in the United Kingdom has assumed a conservative turn. This is evidenced by the shipments from the port of Quebec, which are not quite as active as they were in the month of July. Quebec export houses discussing the situation, are unanimous in the statement that the United Kingdom import firms are still very cautious in buying tendencies, and only ordering what they really need. The labor unrest in Europe with the continuation of high cost of living, has so impregnated the public with the uncertainties of conditions, that construction and reconstruction are practically at a standstill. Nevertheless a very large shipment of timber and deals has taken place from the port of Quebec during the months of July and August but the export houses were prepared for a much larger business.

As regards the fall trade, the exporters do not anticipate any improvement. They say that the fall shipments from Quebec do not look bright, inasmuch as the importers on the other side of the ocean have stopped buying. Only an ordinary business of absolute requirements is expected. These indications also apply to the United States market. In the meantime, the regular liners of all steamship companies persist in maintaining their freight rates, 200 shillings per standard for sawn lumber and proportionately for timber. The tramp vessels, however, have made a further reduction to 175 shillings per standard. There are at present considerable activities in the shipment of spool wood to the Mother Country, and a large quantity now stored on the Louise docks is awaiting steamship accommodation.

The local market is very dull and this applies to the whole province of Quebec. Construction is practically at a standstill on account of the high cost of material. The population and wealth of Quebec City is growing apace and dwelling accommodation is at a premium. Nevertheless no new buildings are going up and, judging by the temper of the people with the means to build, against the prevailing high cost of material, who say they can invest their money to better advantage, these conditions are liable to last for a long period of time.

The recent drop in the price of lumber has not affected the city retail trade, who contend that as they had made their purchases under high-priced conditions, they can't afford a reduction in their quotations without material losses. The position is so acute in this respect that retail lumber dealers cannot make any sales and building contractors are idle, with the exception of carrying on needed repairs or business warehouse extension work. Even the municipal house problem with the Government loan is at a standstill in this

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

city. In explanation, Mayor Samson informs the "Canada Lumberman's" correspondent that it would cost too much to build workingmen's houses under present prevailing cost of material unless the workingmen were prepared to pay a rental of, approximately, $30 per month.

The movement of pulpwood from all parts of the province, especially along the various lines of railway east of Quebec, is meeting with more satisfactory results. Quebec firms interested in this trade say they have less difficulty in procuring the necessary American rolling stock for the shipment of the wood to the American paper mills,, and admit this change in freight car conditions has come about since the "Canada Lumberman" made the graft exposure.

It may be added that railroad executive officers, who have had their attention called to the exposure made in the "Canada Lumberman," are quietly investigating the charges that Canadian dealers in pulp have been obliged to pay $5 in graft per car or else go without. One important railway official, discussing the question with the writer, said the railroad had not the least conception that such a practice existed and blamed the shippers for not giving information to the proper authorities at the very beginning, saying no railroad would tolerate such dishonesty and the guilty parties would not only be dismissed but arrested and prosecuted. An inspector of the Dominion Railway Board, also spoken to, expressed his surprise that shippers had submitted to the graft without making complaint, and at the same time admitted that it had come to his knowledge about Canadian freight train conductors in charge of trains drawing empty cars, shipping off cars at stations for a consideration.

The pulpwood manufacturers in this district are satisfied in the change that is now giving them more cars for shipment of pulpwood to the United States. They have been and still are getting out heavy cuts this summer with the expectation of big shipments to the American market this coming winter. All stations along the line of the Intercolonial and Quebec and Lake St. John Railways east and north of Quebec are receiving large quantities of this wood. The farmers in the Province of Quebec, having come to realize the value of pulpwood, are giving much of their time to cutting wood for the rossing mills and at the same time clearing off all their woodlands along many lines of railway.

Orders Decline in the Ottawa Valley District

A reduction in the amount of business done and a considerable shortage of woods labor, were the principal features of the Ottawa lumber market for the opening period of September, as compared with the last two weeks of August. Prices held firm.

The slackening of orders and inquiries was attributed in several circles of the trade to be due to the cutomary August lull in buying. Strong hopes were entertained that a good autumn business would result. Dealers generally did not believe that the prevailing high prices for lumber had anything to do with the slackening of the demand. Rather they looked back on the August buying of the retail yards both in Canada and the United States and referred to this as now reflecting itself in the Canadian wholesale and manufacturing trade.

Taken on the whole the trade was better than that of a year ago and the market seemed a great deal steadier, and the outlook toward building much improved. During the past year the highest prices known to the lumber trade in the Ottawa Valley have prevailed. Some persons predicted when these prices went into effect that it would be a "sky rocket" market, and that the bottom would drop out of it in a few months' time. Such a prediction has not come true nor is it likely to prove itself, inside of the next six months with the keeping up or advancement of operating costs. Food prices for the woods camps have not come down any, labor is scarce and some companies are paying ten dollars per month more than last season for bushmen and cannot get them. Stocks are low, and the demand has increased. The cost of selling has not dropped any. Taking the above factors into consideration it is hard to see the justification for the price of lumber to come down.

What little demand there was came principally from the United States, and was largely for the middle grades. Canadian business fell off proportionately. Stocks used for interior work with those for sheeting in outside construction were expected to show considerable activity within the next two months.

The foreign car situation remained about the same as it was during the closing part of August, and there was sufficient rolling stock on hand to handle the lessened number of shipments to be forwarded. Compared with last year and the year before the car situation was considerably better, but this, shippers believed, was almost entirely due to the dropping away of business, and the increased number of cars. In short, conditions seemed to be getting more back to normal so far as the car situation went. Little apprehension was expressed regarding the future as to sufficient cars being available, unless there is an unexpected increase in the number of shipments. As is usual at this time of year there is a shortage of cars, due largely to the diversion of rolling stock to the western states and the Canadian Provinces for the handling of the grain crop. On the American Eastern lines, lumber shippers from Ottawa reported that there was little or no congestion.

Export conditions to Europe remained about the same.

Outside of demand and selling, which was chiefly the concern of the wholesaler and the retailer, the lumber manufacturers had their time pretty well occupied on figuring out their bush operations for the coming season. On every hand one was met with the apparently sincere desire on the part of the lumber operators to get out as big a cut as possible. There were obstacles in the way. Chief among them was the high cost of food supplies and the apparent shortage, or "unwillingness" of labor for the bush camps this year. Another feature of the situation was the fact that Ottawa Valley companies have millions of logs stranded along the Ottawa river, its tributaries, and other streams. These logs were grounded by low water, early in the year, and did not reach the mills. Lumber operators have not figured out what they are going to do with them, if they and the usual supply for next season come down to the mill ponds in a bunch? The prospect of a surplus log supply at the mills for a short time is not, however, the main worry of the executive heads of the companies. They are mostly concerned about labor.

A survey of the situation, given to the "Canada Lumberman" by one of the best known figures in the lumbering trade in Canada, and who desires that his name be withheld, shows that there is a tendency on the part of labor this fall not to go into the woods camp if other employment is available. There are strong symptoms of the men holding back and taking other jobs if they can get them. Heads of lumber companies admit that the gathering of the western grain crop and other harvesting operations are as usual giving employment to a very large number of men, many of whom will, when this work is fiuished, apply at the different agencies of companies to go to the woods camps.

Owing to the exceptionally high food costs this year, the manufacturers, on the other hand, are turning over in their minds the advisability of establishing and stocking as many camps as usual. "What is the use of provisioning five camps if we can only get the labor to operate two of them. It would be a most decidedly serious

and unprofitable operation," was the comment of one of the heads of an Ottawa Valley Company. Another angle of the situation, under present labor conditions is that while jobs in the woods may now be plentiful and woods labor scarce, the situation may be reversed and there will be plenty of men and few jobs available, if the Ottawa Valley operators decide to establish fewer woods camps owing to the uncertainty of the outlook, for successful bush operations. The next month it was expected would decide which way the scale will turn.

Conditions with the woodworking plants and factories remained as they were during the latter part of last month, so far as the labor conditions were concerned. The representatives of the Inside Woodworkers and Factory Workers Union appointed committees to meet the employers, but the employers, as a body, did not meet the general committee representing the Union. Instead the heads of some of the plants met a committee of their own employees. No definite decisions were reached. It is likely that when the whole dispute is settled that the employers will agree to advance certain wages to employees whom they consider are worthy of it. Outside of this the dispute looks as if it would die a natural death through the course of time. All the factories operated and factory labor was reported to be adequate.

The call for sash and door and other factory manufactures slowed up a little. Export business, other than to the United States, was reported as remaining steady, and it was predicted in the trade that a further advance in export price of flooring would likely be made soon. Though not announced the advance, it was stated, will be in the neighborhood of fifteen per cent.

Spruce 48 inch lath dropped about $4 per M. and manufacturers' quotations were eleven dollars.

Business is Quiet in Montreal Circles

Practically no change is to be noted in the Montreal market. As a whole, business is quiet, which is the usual condition at this time of the year. While some wholesalers declare that there is absolutely nothing doing, others report that a fair trade is being transacted.

Men in other lines are anticipating a drop in prices, but one rarely comes across a lumberman who believes that we shall have cheaper lumber for a long time. Conditions do not warrant such an anticipation.

There is a certain amount of depression in one or two industries and, according to a report, men who have been unable to obtain work at their own trades have gone to the bush in considerable numbers. These will be welcomed. Last year it was very difficult to secure enough men, and of those engaged an appreciable proportion did not prove efficient.

At last Montreal has passed the by-law for obtaining a million dollars for the workmen's dwelling scheme. It is, of course, too late in the season for anything to be done in the way of building. The Montreal building permits for August totalled $1,336,350, a decrease of $104,895, this being the first decline for many months. The total for the year to date is $10,996,379, a gain of $5,082,711. Building business has been fairly good this year, although the figures as given above, are not as satisfactory as they appear on the surface, for account must be taken of the increase in the value of labor and material. Several important buildings have been delayed by the scarcity of materials.

A small quantity of lumber is being shipped to the United Kingdom. Rates continue to stand at 200s. per standard. The steamship companies are now more keenly looking after the export trade, owing to the competition of tramps.

Heavy Increase in Fire Loss

For the first seven months of 1920 Ontario's fire loss shows a substantial increase over the same period for 1919. A statement issued by Fire Marshal E. P. Heaton shows that the fire loss for the first seven months of 1919 was $5,842,536, while for the period of 1920 it had risen to $6,843,788, an increase of $1,001,252.

In 1919 for the seven months the number of fires was 5,676, and in 1920 5,669, a decrease of 7. The losses not covered by insurance in 1919 amounted to $1,466,417, and to $1,884,327 in 1920. During July of this year lightning caused a fire loss of $113,539. In all cases the buildings were not protected by lightning rods. Only two big fires figured last month. The St. Thomas Foundry, $150,000, and stores at Porquois Junction, $100,000.

July, 1920, shows an improvement over July, 1919. The total fire loss for last month was $676,297, while for July, 1919, it was $1,028,833. There were 892 fires in July, 1919, and 729 in July, 1920.

EDGINGS

Ontario

The Grand Trunk Railway is erecting a large lumber shed at Palmerston, Ont., for the storage of lumber.

The sawmill of John House at Courtland, Ont., was recently destroyed by fire, the loss being $7,000. Mr. House is planning to rebuild.

The annual meeting of the Spanish River Pulp & Paper Company, Limited, will be held at the head office in Toronto, on September 30th next.

Just west of the C. P. R. station, Lindsay, David Kirkpatrick, a lumber scaler, was struck by a freight train and killed. It is said that he was walking on the track and apparently failed to hear the approaching train.

The Lazier Paper Mills, Limited, Belleville, Ont., have been authorized by supplementary letters patented to change their name to the Belleville Paper Mills, Limited.

The Inside Woodworkers of Ottawa have accepted the award of the Board of Conciliation and have appointed committees to interview the different employers in an effort to bring about an amicable settlement of the wage dispute.

Anderson, Shreimer & Mawson, of Toronto, who own mills at King Lake and Eagle Lake, have closed their operations for the year and are putting in camps preparatory to taking out their usual stock of logs for the coming season.

The R. Laidlaw Lumber Co., Toronto, has complained to the Dominion Railway Board against the C. P. R. interswitching toll of two cents per 100 lbs. on cars unloaded by them on the private siding of the Toronto Power Co. in North Toronto.

The Fort William Paper Co., Limited, Toronto, was recently incorporated to manufacture and deal in all kinds of pulp and paper products and by-products. Capital $15,000,000. Two of the incorporators are T. Gibson and J. G. Gibson, Toronto.

A building 60 by 300 feet is being erected by the Ontario Paper Company, Limited, at Thorold. A new paper-making machine is being added to the plant's equipment, and it is announced that the capacity of the mill will be thus raised from 230 to 300 tons of newsprint a day. The building of the plant addition is already well advanced.

A fire which started among the standing timber and logs owned by John Harrison and Sons, Owen Sound, on Horse Island, was extinguished by the rain, but not before it had done considerable damage. Between 7,000 and 8,000 cedar logs, besides a large quantity of standing timber, was destroyed, but the damage has not yet been estimated. The cause of the fire is unknown.

According to the information made available recently the profit for the Provincial Paper Mills, Toronto, for the year ended June 30th was $643,807 as compared with $335,128 for the same period of the previous year. The profits mentioned do not allow for depreciation or war taxes. The stock was recently placed upon the market but is closely held. Recent advances indicate that there is a very limited amount available.

The Vigars-Shear Lumber Co., Port Arthur, have placed in commission a motor truck of two and one-half tons carrying capacity. The truck, which can be used to move 3,000 feet of lumber in one load is possibly the largest in the Twin Cities, and, of its kind, is the only one in use at the head of the lakes. Among its special features is a device for rapid unloading. The tires on the monster truck have a breadth of eight inches.

The Monteith Pulp & Timber Co., of Toronto, have disposed of their mill and limit at Monteith on the Driftwood River, to the Moose Lake Lumber Co., of Sudbury, Ont. A. E. Wicks, of Sudbury, is the president of the new company; Alex. Ainslie, Sudbury, vice-president; Victor Brander, manager, and Chas. Brander, secretary-treasurer. The plant at Monteith is fitted with a circular saw and up-to-date equipment and has a cutting capacity of about 35,000 feet a day of spruce. The annual production since 1916, when the mill was built, has been about 4,000,000 feet.

Eastern Canada

Jos. Lafrancois Co., of Limoilou, Que., are erecting a mill and sheds.

The Makamik Pulp & Lumber Co., of Makimik, Pontiac County, Que., intend erecting an addition to their mill.

The sawmill of Eusebe Hamel at Makamik, Que., was recently wiped out by fire. The loss was $30,000. The owner intends rebuilding.

Paul Tremblay, Thomas Tremblay and Edouard Tremblay were arrested in Charlevoix County on the charge of cutting lumber on the limits of Price Brothers & Co., Ltd. The prisoners were tried at Murray Bay and were all three found guilty and condemned.

Mont Louis Seigniony, Ltd., Montreal, Que., was recently incorporated to manufacture and generally deal in lumber, timber and all kinds of pulp products. Capital $1,000,000. Two of the incorporators are A. H. Duff, K.C., and W. A. Merrill, of Montreal.

The auction sale of timber lands and farms of Mr. T. A. Hurley, Blissfield, N. B., was held recently. Two of the timber lots, containing 100 acres each, were bid in by R. V. McCabe, and the remaining 600 acres of timber lands, as well as farm and stock, were bid in by John T. Sutherland.

General curtailment of lumbering operations for the next logging season is reported from St. John, N. B. Fewer crews and smaller in make-up are said to be going into the woods. The reason gives is the slow movement of manufactured lumber from the millyards of the province. Freight congestion on the railways and inability to secure the steamships are the reasons assigned for that.

At Chubb's Corner, N. B., 18,,000 acres of timber and other lands, situated in the Parishes of St. Martins and Simonds, were purchased by Maurice H. Tufts, of the Pejepscott Lumber Co., for $14,500. Several other lumbermen were present and bidding was fairly brisk until the $11,000 mark had been attained and then the contest was practically limited to two prospective buyers. The deed to one of the lots had been lost, it was announced. In

one block of four lots in St. Martins on the road from Loch Lomond to Quaco, there are 1,000,000 feet of virgin hardwood and 1,000,000 feet of spruce.

The Davie Shipbuilding & Repair Co., Quebec, have completed th installation of th power plant and machinery in five wooden steamships. This completes the order placed with the Davie Shipbuilding Co. by the French Government. These wooden ships were built at the Lauzon shipyards and were then towed across the river to the Louise docks, where the installations were completed.

Miller & Gordon Mfg. Co., Carleton, N. S., hardwood manufacturers, are making extensive improvements to their plant at Carleton, Yarmouth County, N. S. They are putting a new steel roof on the buildings and extending their smoke-stack and making other alterations. W. E. Miller is president and treasurer of the company; Winfield Gordon, vice-president; and Roy D. Miller, manager and secretary.

The Export Pulpwood Company, Limited, Montreal, Que., was recently granted a provincial charter to take over and acquire the firm formerly known as the Meigs Pulpwood Co., Inc., head office Wilmington, Delaware, operating at Campbellton, N. B. The company will conduct a general business manufacturing and dealing in lumber, timber, pulp and other forest products. Capital $100,000. Two of the incorporators are A. R. McMaster, of Westmount, Que., and Henri Morin, of Montreal.

John W. Gates, who is widely known as an expert on boiler settings and furnace brickwork, has formed the Gates Engineering Co., Limited, with head office at 348 St. James St., Montreal. The company will specialize in boiler and furnace brickwork and will be under the direct supervision of Mr. Gates. The Gates Engineering Co. announce that no job is too large or too small for them to undertake in the way of changes in boiler settings or furnaces, and that they may be consulted freely on any problems without obligation.

Western Canada

Frank Beban, Extension, B. C., contemplates the erection of a sawmill at a cost of $75,000.

Six dry-kilns filled with shingles, a loading shed also fairly jammed with material, and several C. P. R. box cars in process of loading were burned recently in a spectacular fire at the McNair Shingle Company's new plant at the head of Burrard Inlet. The loss is estimated to be in the vicinity of $75,000. The mill office also burned, but the mill itself was saved.

The Champion Shingle Mill at the foot of Campbell Avenue, near the B. C. E. R. Co. New Westminster-Marpole tracks, was destroyed by fire, the loss being roughly estimated at $20,000. The mill had not been in operation for some time so there was no stock of shingles on hand but two weaving machines and an electric motor valued at $7,000 were destroyed.

Damage to the amount of $10,000 was done by a bush fire recently which spread into the yards of the Partridge Lumber Company at Mile 94, Greater Winnipeg Water District line, it was learned from officials of the water district. The spur track into the yards was also damaged. There were 100,000 cedar posts valued at $7,000 belonging to the company burned as well as 250 peeled cedar poles and a flat car belonging to the Montreal and Atlantic Company valued at $3,625 and railway ties valued at $75.

A recent despatch from Estevan, Sask., says Norman Ross, a superintendent of forestry under the Department of Interior, was a visitor to Estevan lately. His particular mission is to promote propagation of trees on the prairies and, until now, he has been under the impression that the Dominion experimental farm at Indian Head was the sole reliable producing centre for nursery stock. But, having heard of the Prairie Nurseries at Estevan, he came down to have a look and to his surprise found trees and shrubs sufficient to embower a promenade from Estevan to kingdom come.

Clarence Hoard, president of the Bainbridge Lumber Co., of Birnie, B. C., was recently elected president of the Victoria Shipowners Limited This later company is a co-operative concern, which, with the assistance of the federal government, is building four lumber-carrying schooners at Victoria, B. C. The new company have made good progress in the construction of these vessels, three keels having been laid down at the Cholberg shipyards, and it is expected that the first of these will be completed by the end of the year. These vessels are to be operated in the lumber-carrying trade.

The Westminster Shook mills, Limited, has taken over the modern box plant of the Lumber Products, Limited, New Westminster, B. C. It is expected that the new firm will have this plant in operation in the near future. The Lumber Product's box factory has a capacity of 10,000,000 ft. of box shooks per year and it is anticipated that the increased demand for material from China Straits Settlement and South America will take care of this output. Mr. R. L. Cliff, who is president of the new company, is a well-known New Westminster business man, and is president of the B. C. Manufacturing Co., Limited, the Pacific Mills Co., Limited, and Food Products, Limited. Mr. J. H. McDonald, who is associated with Mr. Cliff in the new enterprise is the manager of the B. C. Manufacturing Co.

Premier Oliver and Hon. T. D. Pattullo, Minister of Lands, arrived recently in Prince Rupert, B.C., after a two weeks, tour of the northern coast district and the central interior. Following an inspection of the pulp and paper plants on the Coast, Mr. Pattullo spoke before an audience of the amended legislation appertaining to timber limits suitable for pulp-making. In order to encourage the establishment of more plants, permission may be granted for the cutting in half of the license fees where the department considers the limits better suited for pulp and paper making than for lumbering. The minister stated that this change was resulting in greatly increased interest among manufacturers, with the immediate prospect of the establishment of one or more plans in the near future.

Prince George is in the limelight at present as the prospective centre of pulp-making on a large scale. The immense stands of spruce and balsam near that city have been investigated this summer and negotiations with the timber-holders carried on. Mr. Pattullo and Premier Oliver will investigate the situation at Prince George before returning to Victoria.

Announcement

After five years of Government regulation we are once more permitted to manufacture high patent

PURITY FLOUR

with all the perfections of its old, high standard of quality.

No announcement of this Company was ever made with greater pleasure and our satisfaction with the welcome return to normal milling conditions, will be evidenced in the material improvement in all your baking.

Order a bag from your Grocer.

Western Canada Flour Mills Co., Limited

MILLMEN

and others interested in Steam Power Plants

Whether you contemplate building a new or repairing your old power plant it will pay you to investigate our recently patented Steel Water-Jacket Furnace. This brickless furnace is built of heavy steel plates, spaced apart, forming a water jacket all around, carrying same amount of steam as boiler. Splendidly adapted for use of portable mills as it is easily moved and placed in position. Burns sawdust or mill refuse of any description, while at the same time it generates one hundred per cent. more steam than will any other type of furnace. Conforms to any style or type of boiler, either straight draft return or water tube.

Do you, or do you not want to save half your coal? It's up to you. Ask for particulars.

KLIM
IN POWDER FORM

For Economy and Convenience

The question of what milk to use in a lumber camp is largely one of transportation and storage. Fresh liquid milk is, therefore, entirely impossible. One must look for a form of milk which, while retaining its natural flavor and full food value, is reduced in bulk and weight and has greater keeping qualities than liquid milk. This milk must of course be low in price and purchasable in large quantities.

Klim is the solution of the lumber camp's milk difficulties.

It is fresh separated milk, pasteurized, and reduced to a fine powder. It contains all the food elements of separated milk in their natural state, perfectly soluble in water. It is convenient because the exact quantity desired can be used without endangering the keeping qualities of the powder left in the tin. The natural flavor of the fresh separated milk remains unchanged in Klim.

Klim bulks smaller and weighs less than any other form of milk. It can be shipped anywhere in any climate **by freight** and requires no refrigeration or special storage **because it is dry** and will keep indefinitely. A whole season's supply can be shipped in at one time. Klim is most economical—it costs less and there is no waste.

Klim, when whipped into water, becomes again fresh, natural-flavored separated milk and can be used as such in soups, gravies, bread, biscuits, pies, cakes, tea, coffee, cocoa and other foods and drinks.

Klim is sold by all wholesale grocers and supply houses in 10-lb. tins, 6 tins to a case—each tin makes 40 quarts. Order with your grocery supplies.

Simmons Bunks Ensure Their Rest and Comfort

A Simmons Double Deck Steel Bunk

The construction is boltless. The top and bottom frames are complete units, strongly riveted. The upper and lower frames lock securely in the posts and are reinforced by interlocking braces. The "Knock-down" Construction is much appreciated, as a complete bunk-house or bunk-car of Simmons equipment can be taken down, moved, or placed in storage on short notice.

THE standard Steel Sleeping Equipment manufactured and supplied by Simmons Limited is fast supplanting old-fashioned unsanitary and uncomfortable wooden beds, because it is more efficient from every point of view. Simmons Bunks are **built for sleep** and therefore keep workers in good health and contented.

Simmons Bunks are built to stand hard usage. They cannot be injured or damaged, or used for fuel, intentionally or otherwise. They are 100% sanitary. Water will not injure them. Camps or cars in which they are used can be thoroughly scrubbed or fumigated without removing the bunks. As they give the same service season after season, expensive replacements are unknown.

Simmons Bunks are standard equipment in the Maintenance Cars of the C.P.R., the G.T.R., Canadian National Railway and Canadian Government Railway—and in the camps of such large organizations as Riordon Pulp & Paper Co., Shawinigan Engineering Co., Dominion Construction Co., F. H. Hopkins Co., Beattie & Morrow, etc., etc.

Now You Will Find

BEAVER QUALITY

You already know Beaver Board. You know how Beaver Board has developed from a small beginning until now it is a basic building material in use all over the world. Now Beaver Board is expanding into allied lines—enlarging its field for better service.

Vulcanite Roofings have been selected as a "Beaver Quality" product, because of their merit. They have never been extensively advertised, yet for over eighteen years they have steadily forged ahead on quality of product alone until today Vulcanite's manufacturing facilities are larger than those of any single roofing manufacturer.

Through Vulcanite's consolidation with Beaver Board, Vulcanite service is now being extended to the Canadian trade in a broad consistent way. A completely equipped plant is now being put into operation at Ottawa, Ontario. A forceful advertising campaign is soon to get under way. It will be combined with a complete line of effective selling helps to identify Vulcanite dealers.

In all this publicity, the "Beaver Quality" trade mark, already well known to the Canadian trade, will be emphasized again and again as "The Mark that Insures the Result." Added to Vulcanite quality and Vulcanite advertising, it will doubly insure Vulcanite success.

Get complete details of this new Vulcanite proposition and take advantage of the bigger profit opportunities it offers you. Write for details.

SPECIAL FEATURES OF THIS BAND MILL

1—Tension on saws maintained by steam—quickest and most sensitive form of tension yet devised.
2—Top wheel supported both above and below mandrel.
3—Extra large mandrel bearings top and bottom.
4—Top wheel has 12-inch range of adjustment.
5—Unbreakable upper saw guide raised and lowered by steam—**first used on our machine.**
6—Both top and bottom wheels instantly aligned by screw adjustment.
7—Operating mechanism is rapid and power driven.
8—Takes saws 12 inches to 14 inches wide.
9—Extra heavy, rigid, strong and accurately built throughout.
10—Built by expert workmen in a plant that has been manufacturing high grade sawmill machinery for over sixty years.

Also: PILINGS, RAILWAY TIES, and HEWN BIRCH TIMBERS.

OUR SPECIALTY
We Manufacture SPRUCE LATH AND BOX SHOOKS.

Prompt attention given to your requirements. Let us show you.

D. Blais & Co., Ltd.
Notre Dame Des Anges, Que.

FIRE BRICK

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel," "St. Marys," "Keystone" and "Rotex"

Write for copy of our catalogue, "Refractory Efficiency Engineering."

for general service

LIONROYAL BABBITT

MADE IN CANADA

We warrant that no other Babbitt at the price will perform as well in so many different classes of bearings and are ready to prove this in any case by trial installations in competition with any metal of its type.

The secret of its success is in the method of its alloying. It is produced under the Stanley Process, which is controlled exclusively by us throughout the Empire. Try it and be convinced.

BRITISH SMELTING & REFINING COMPANY LIMITED

MONTREAL

Proven Satisfaction gives them their reputation; they are

LEADERS

in the realm of heating and cooking in the camp.

Simplicity and reliability make Adam Hall Limited products an asset to any camp. For both heating and cooking these stoves have earned their reputation through actual service in the bush. Let us send you further particulars and reasons why Adam Hall Limited can best supply your needs for camp Heaters and Cookers. Ask the man who uses one.

Four sizes: 30", 38", 44", 50".

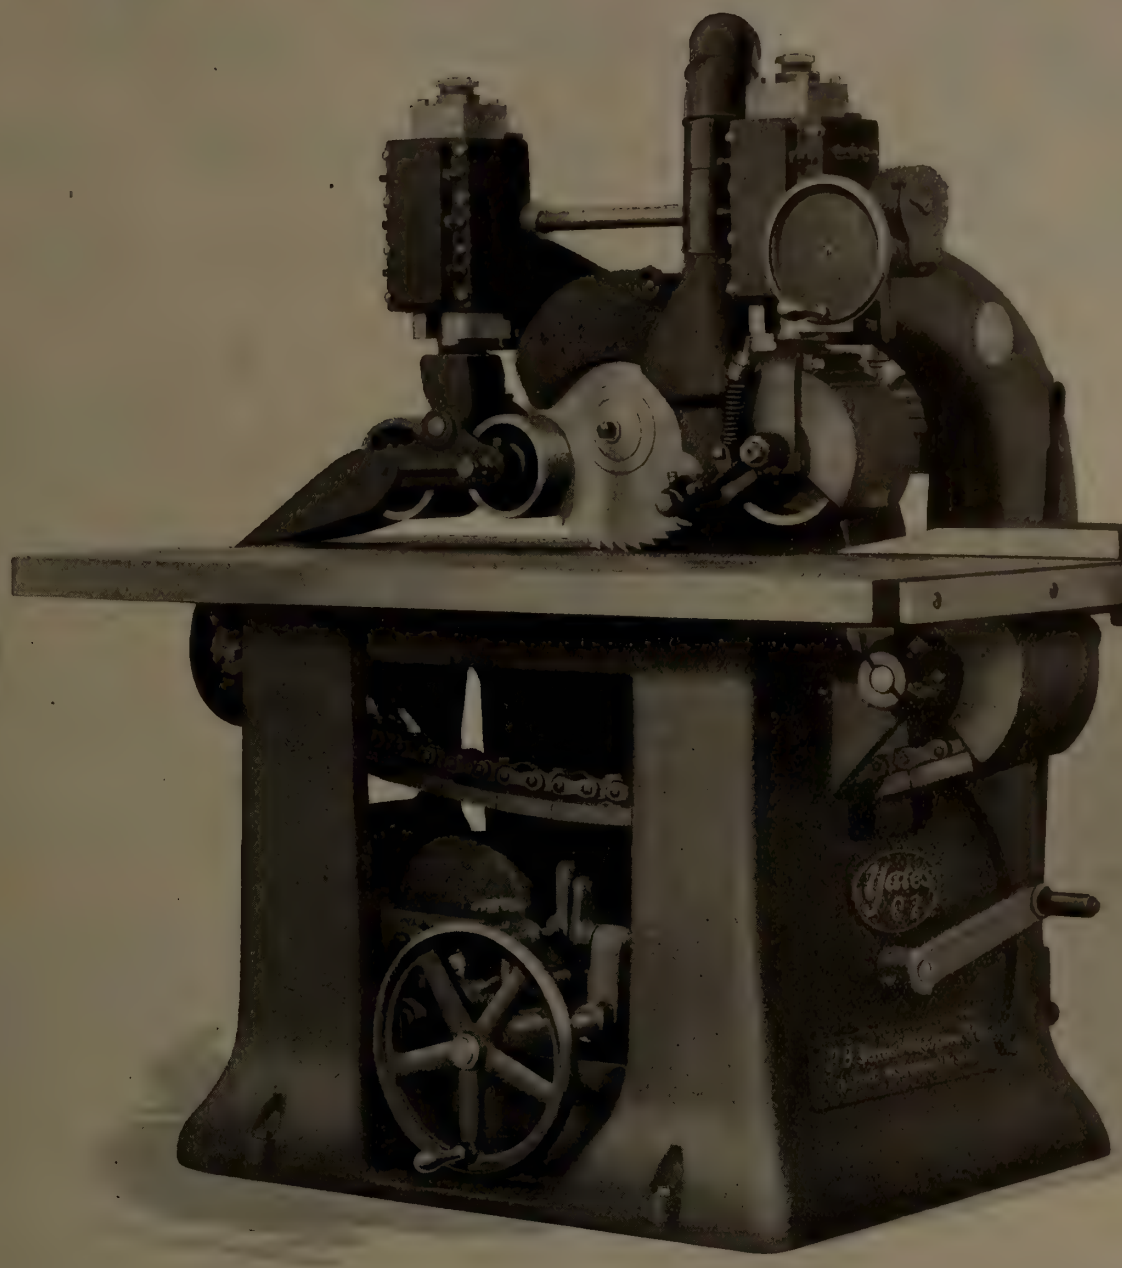
SAVES TIME—SAVES MEN



Never before has man power been so badly needed—never before has time saving meant as much in the way of labor saving.

Yates Type G-2 Ripping Saw

is one of the best tools made to conserve man power. Its solid construction, excellent design, and freedom from mechanical troubles make it a favorite wherever used. Dozens of them are installed all over the United States and Canada. The increase in sales of this machine is proof of its popularity.

Why don't YOU send for descriptive literature?

The Standard Hoist for Loading and Skidding Logs
Made with either one Drum, or two Drums, as shown, and in seven sizes, from the little 10 horse power machine to the massive 50 horse power size.

POWER LOADING

Is the fastest and most economical method of loading logs as proven by the experience of thousands of camps.

USE EITHER STEAM OR GASOLINE AS YOU PREFER

One Ontario Lumberman is using 7 machines same as shown in the illustration. With each of these he can load up to 2,000 logs per day. He uses the 20 H.P. and the 25 H.P. sizes. He uses these machines for only two months each year, but even at that he finds them a good paying investment.

The Gasoline machines will do the same work exactly as the steam, and are much lighter in weight, therefore easier to move around. Their price is also much less. They are made in the same 7 sizes as the steam power machines, from 10 horse power up to 50 horse power. The 10 H.P. size will load up to 1,000 logs per day.

Our booklet "Suggestions for the Lumberman" describes many methods of using these machines for both Loading and Skidding. If you have not a copy, write us, and one will be sent you free of charge.

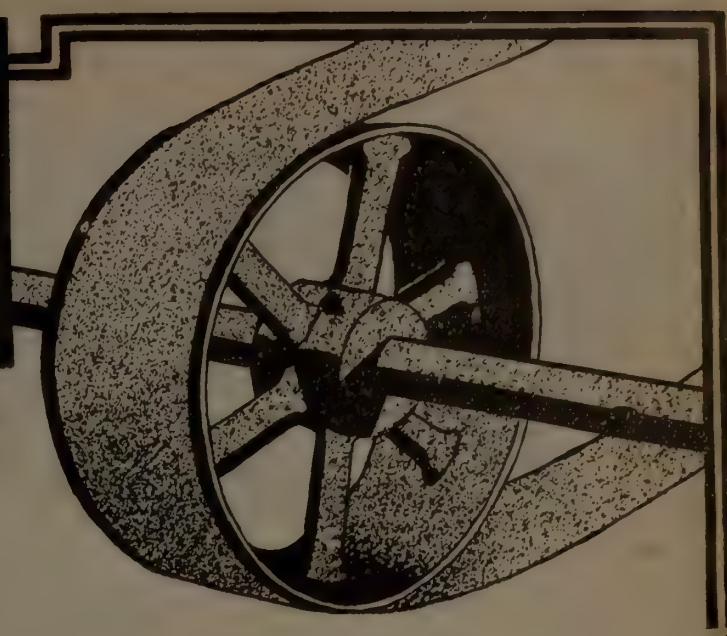
When You Overhaul Install

GOODHUE BELTS



"Acme Waterproof" Leather Belting

This brand is especially well suited to the wet places in a saw or pulp mill and will run true as long as it is in service. When you are overhauling your mill equip it with "Goodhue Belts" and you will never regret it. They are honestly made of solid leather—every inch a good belt and they won't stretch.

PORT HOPE - ONTARIO

The Algoma Range

A Steel Range for Camp use. Built especially for this purpose. It possesses features that are attractive in usefulness but not in beauty. A blunt, hardy Range with a wonderful record for Service.

The Algoma is built in three sizes—each one has the three necessities,—

(1) An Oven of ample capacity;
(2) A cooking surface, open and capacious;
(3) A Firebox, big yet economical.

The Body and Oven are made of Steel that will last. Each piece of steel is solidly rivetted to the other. Great care is exercised to ensure the complete rigidity of the entire construction.

The cooking surface is cast-iron, solid and thick; therefore the heat barely affects it. There are a variety of sections.

The Firebox is lined with weighty pieces of cast-iron. Strenuous usage may wear these linings away—when this happens, replacement is easy and the Firebox is made as good as new.

The Gates are the duplex pattern—two bars, each heavy and perfectly made. Simply operated with one shaker bar.

The Camp Comfort

A heater that radiates direct heat from the body when burning wood. Simple, effective and efficient. The body is filled with wood and paper the light applied and the heater is operating.

The Lumberman's comfort in cold days and nights. Heat radiates in all directions from the round steel body. In the coolest weather the atmosphere around the Heater is comfortably warm.

The "Camp Comfort" is built of well tested materials that can withstand rough usage. The two ends are heavy cast-iron and the door is so large that huge chunks of wood can be fed to the Heater with ease.

The body sits on four cast-iron legs which fit into rigid cleats. Side or top shelves are supplied and are very convenient for temporary use in keeping foodstuffs and liquids at a high temperature.

The "Camp Comfort" is a Camp Heater. It is simply made. It produces the required results—See it.

McCLARY'S ability to make "Good Stoves and Cooking Utensils" is recognized by all users. Seventy-three years solid experience in the manufacture of Stoves gives us the machinery and skilled man power to produce highly specialized articles. These two Stoves are good samples of our best Foundry productions.

Home in Kingston Roofed with Brantford Asphalt Slates

Beauty, Fire Resistance, Economy Combined in this Roofing

THE roofing that is being sold more and more throughout Canada, not only for barns and small buildings, but for the most expensive homes, churches, golf clubs and public buildings, is Brantford Asphalt Slates.

Brantford Asphalt Slates are made from a special grade of long fibred felt which is exceedingly absorbent. This is thoroughly saturated and coated with Asphalt and surfaced with crushed slate, which is embedded so firmly into the Asphalt that it cannot even be kicked off with the heel. This makes a splendid surface of beautiful reddish brown and dark green—a surface that never fades.

This grade of roofing is sold in three different forms. Brantford Asphalt Slates, Brantford Asphalt Slab Slates and Brantford Crystal Roofing.

The Slabs are really 4 slates in one and save time in roofing a large building.

Crystal Roofing is the same material as the Slates, only in roll form, and is especially adapted for barns and out-buildings requiring a permanent protective covering.

Asphalt is one of the most water-proof materials known, and Brantford Asphalt Slates being non-absorbent do not become water soaked or rot, neither do they crack nor fall off. They possess one great advantage over any other roofing made in that they cement together under the heat of the sun and form a solid, pavement-like surface on the roof, under which no rain or snow can drive, and no individual slates become loose or fall off. Highly recommended by prominent and experienced builders.

Brantford Asphalt Slates

will be used extensively in the future, and will play a big part in the great Period of Reconstruction which is just beginning.

Lumber dealers will find this a most profitable line to handle. Customers will buy it when ordering lumber, and it not only develops into a profitable sideline, but also brings new customers and helps increase your lumber sales. At least put in a small stock of this roofing. You'll need no urging to send a large repeat order.

Let us send you full information, prices and samples

Reduces Fire Risk

The presence of dust on walls, beams, rafters, and the accumulation of shavings in the planing mill, greatly increase the fire risk.

And also the choking of machines with chips and shavings, has a tendency to militate against an efficient day's work.

Adequate protection against these hazards can be secured only by a successful dust-collecting system.

Sturtevant
(REG. U. S. PAT. OFF.)

Planing-Mill Exhausters

Sturtevant Systems have given splendid service wherever they are installed in Canadian planing mills. The powerful draft draws the dust and shavings from the tool edge, carrying them with lightning speed to some point outside, giving the operator a chance to work at better advantage.

Our Bulletin number 261.C. is of special interest to mill-men

Look for *dependability* in a Bertrand Machine

We manufacture an extensive line of sawmill and woodworking machinery of which we shall be pleased to send you prices and full information.

DEPENDABILITY is what the millman wants. By that we mean a machine capable of turning out a full day's work, six days in the week, and doing it with maximum speed and efficiency. Such a machine is an investment—a money maker, for in addition to doing it's own work, it enables it's operators to work continuously; free from lay-offs due to unnecessary breakdowns.

The Bertrand Machine here shown is one that has found wide favor because of it's dependability. It deserves your inspection.

RESPONSIBILITY

At night—when the people of your town are taking recreation—in places of amusement or in their homes—this is the time when the safety of your Municipality weighs most heavily on those responsible for its protection from a great fire.

The unexpected fire comes to every town and too often the distress and loss of life and property, left in its wake, cannot be reckoned.

The conscience of those responsible is clear if a fire alarm box is at every main street intersection. The

Northern Electric
GAMEWELL
Fire Alarm System

is the proven quickest and most positive known means of alarm. The telephone cannot compare with it for speed and accuracy. Instantaneous in its action it utilizes precious seconds—no time is lost. In most cases, the fire is under control from its infancy.

The fact that 99% of the fire alarm systems in Canada are Northern Electric Gamewell has saved the Dominion untold thousands of dollars and many lives.

If we can be of service to you in this important matter, call on us.

DUPLEX TRUCKS

BUILT FOR BUSINESS

The Wonderful Strength of the Duplex Limited

AN actual photograph of a Duplex Limited being lifted clear of the ground by a cable around the windshield frame.

This wonderful strength in the cowl, while perhaps startling, is still only typical of the extra strong, rigid construction of the Duplex Limited in every detail and in every part.

It is this great Duplex strength and honesty of mechanical construction that makes the Duplex Limited a truck that a business man can buy and use on a practical business basis.

High Speed—Complete Electrical Equipment (Including Starter) Pneumatic Tired, 3000 to 5000 pounds capacity.

Getting Out of The Woods With a Duplex 4-Wheel Drive

THERE are real reasons for the steadily growing use of Duplex 4-Wheel Drive Trucks in the Lumber and Logging Industry.

These men are hard headed, practical business men. They buy trucks for business use and their trucks must make good for them on a business basis and you can leave it to them to know definitely whether or not their truck *is* making good.

It is a fact that many lumber and logging companies say that the Duplex 4-Wheel Drive is the only successful truck they ever owned.

Perhaps your experience has been such that you are just a little doubtful of trucks. If that is so then you are just the man for whom the Duplex Dealer has a real message.

The Duplex 4-Wheel Drive is a three and one-half ton truck that can operate with or without trailer. It has power in every wheel. It keeps moving so long as the wheels can find bottom.

Its record for low upkeep, for steady, consistent operation, its all around ruggedness and dependability have made this Duplex 4-Wheel Drive the leading heavy duty truck of America. It has back of it eleven years of continuously successful operation. It is time tried and use tested.

These photographs that you see in the Duplex advertisements are real photographs—taken on the job and during working time. They are not posed just for the picture. The loads shown are real loads that are really being hauled for a purpose. There is nothing of the movie thriller about them. Every truck shown is owned by somebody and working for the man that owns it.

Write us direct for portfolio of photographs and for letters from users in your own line of business. Men that you know to be good business men and that you know would never write a "testimonial" letter that wasn't absolutely true.

You can depend on anything you read about the Duplex—and unhesitatingly believe what the Duplex dealer tells you. He can demonstrate everything he says.

This is a business truck—built for business—and sold on a clean, honest, American business basis of value received for every dollar you put into it.

See the Duplex dealer near you. He will let the truck talk for itself. He is a responsible man with a sound reputation behind him and he lives up to it. The Duplex is always a safe investment. Get the facts for yourself and if you have trucking problem get them now.

DUPLEX BUILT FOR BUSINESS

Duplex Truck Company

Lansing • Michigan

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

Dunbar Engine & Foundry Co.

ATKINS STERLING QUALITY SAWS

Tempering

In the Atkins factory the tempering of *Sterling Quality Saws* is not done by craftsmen who pose as "wizards."

It is done by experts who work on information supplied by the laboratory and the latest devices for making accurate physical tests.

For this reason you will find *Atkins Sterling Quality Saws* uniformly tough, hence they will cut and do good work for a longer time without refitting than any other saws made.

Ask for our catalog and learn more about our products

The Ideal Edger for Light Mills

Specifications

Our new Double Edger is built on entirely new lines, and possesses many features that commend it to mill men. The saving in material alone will soon pay for the machine. The output of a mill with this machine can be increased by one-third. It is best adapted for medium-sized or portable mills that cut from 5,000 to 25,000 feet of lumber per day.

SAWS—This Edger is fitted with either two or three saws as required. The saws are 16 in. in diameter, and 10 in. gauge. The greatest distance between saws is:—Two saw machines, 24 in.; three saw machine, 20 in., the least distance between saws, 2 in.

DRIVE PULLEY—The Drive Pulley is 9 in. x 9 in., affording a good belt grip, and is supported by an outside bearing.

SAW ARBOR—The Saw Arbor is made of 2½ in. steel, and has very wide bearings.

Make Saws Cut And Planers Hum

Your saws may be well filed, swaged nicely and rounded perfectly, but unless your mill's belting is correct you do not get an honest day's work from your machinery.

You will find potential assistance and an increased output by using Graton & Knight Standardized Series Leather Belting. This series is composed of a number of brands and types of belting standardized both in manufacture and application.

Why not avail yourself of the opportunity of calling in a G & K engineer and letting him analyze your power transmission. You incur no obligation for this service. Your power transmission must be right if your production is going to be right.

Every G & K Belt will give rugged service because it is built for this kind of service. Your saws will cut and your planers will hum a real tune when your plant is standardized on G & K Leather Belting.

We Want a Man

To cover the Province of Ontario using our Orillia office as headquarters

The man for this job should have a good knowledge of saw mill machinery, with experience in selling to the saw mill trade.

If he understands the engineering end of the business and can make plans and sketches right on the job, so much the better.

An understanding of foundry and machine shop practice will be an advantage.

To the right man we offer a good present position with splendid prospects.

Please give full information in first letter.

The E. Long Manufacturing Co., Limited

Orillia **Canada**

Waterous Kendall Nigger

The "WATEROUS KENDALL NIGGER" overcomes the greatest drawback experienced in the ordinary steam nigger—the chance of accident unless operated by an expert.

Where the carriage is of medium weight, unless in the hands of an experienced man, the danger of wrecking the carriage is especially great.

The "WATEROUS KENDAL NIGGER" is practically accident-proof. While it possesses both the speed and power of the ordinary Steam Nigger, it is so designed that a green operator can do quick and effective work without endangering the carriage in any way.

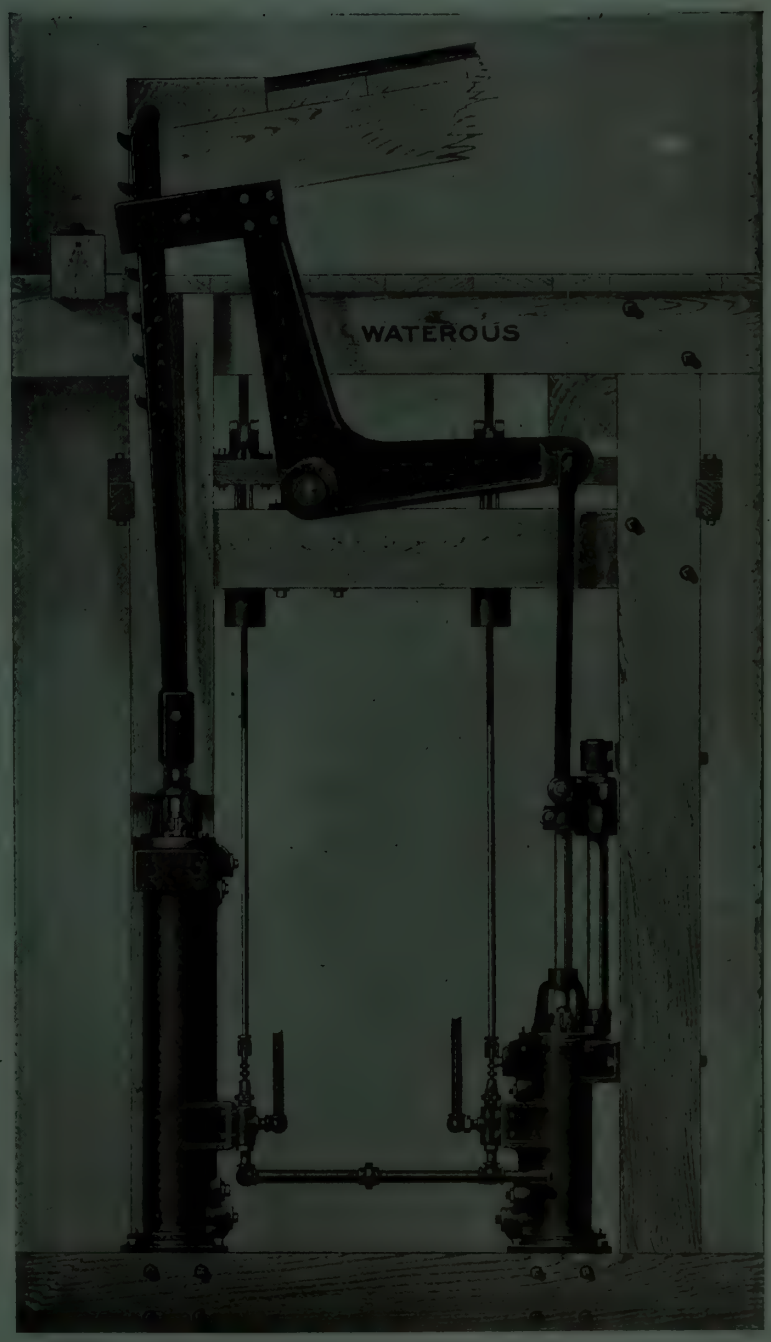
By attaching the Nigger Bar to one cylinder only, one motion of the operating lever turns the log and a quite distinct and separate motion is required to load it.

The stroke of the cylinder controlling the loading motion is made very short and thus further precludes the possibility of a serious mishap.

The Kendall Nigger is constructed to be powerful and rapid in action. The cylinders are 10 in. and 8 in. in diameter, pistons are steam cushioned at both ends of stroke, valves are adjustable to permit increase or decrease of operating speed without affecting the power in the machine.

Nigger Bar is of wrought iron, dogs are extra wide, top dog is winged, a steel roller is supplied. No floor plate is necessary. All lever and crank connections are made short and direct, so that the machine gives instant response to the movements of the sawyer's lever.

A great many of the Niggers are already in use in mills, where speed and accuracy on the log deck are essential, but where a medium weight carriage is operated. If your conditions are similar the WATEROUS KENDAL NIGGER will give unequalled satisfaction.



Ask for details and descriptive catalog No. 123

Waterous

BRANTFORD, ONTARIO, CANADA

Mill Owners

The testimonial letters of satisfied users of our Feed Works should be ample proof of the quality of this machine.

Any mill owner who is having trouble with the old style feed works should investigate the merits of this machine, which is claimed by all users to be far in advance of any other machine now on the market.

Full Particulars on Request

THE MACLEAN MACHINE WORKS, Campbell's Bay, Que.

Not altogether what we say, but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

HEAD OFFICE: OTTAWA, ONT.

A Fast Feed Matcher Head scientifically designed for matching from 200 to 300 lineal feet per minute.

The SHIMER Fast Feed Expansion Matcher Head

With 12 High Speed Bits

The head is built heavy where the strain is and is devoid of all angles or openings, which lessen the wind resistance and cannot block with shavings.
These advantages, combined with the Shimer expansion feature, make a combination that is hard to equal.
The straight knives are long, assuring length of service, while the circular knives can be set back, and the straight knives jointed; in this manner the whole width of the straight knives can be jointed at the one setting.
The circular cutter is then brought to its proper location.

The Cheapest and Best Head on the Market. WRITE FOR PRICES

Grips the Pulley

"Gripoly" is a solid woven belting that defies the friction of shifters, guide forks, or flange pulleys.

Unequalled for use in lumber mills, and gives real insurance against costly breakdowns, and losses in power and time.

THESE EDGES are composed of indestructible strands interwoven with the solid body of the belt.

The material used in the manufacture of "Gripoly" is composed of 85 per cent. pure camel hair, and 15 per cent. long staple cotton, solidly woven to yield a tremendous strength and to resist the severest strain. "Gripoly" grips the pulley, and never slips.

"Gripoly" is thoroughly waterproof, and is equally good for running in wet or dry places.

Bartram & Ball Limited

511 St. Catherine St. W. - Montreal, Que.

ANNOUNCEMENT

We have purchased the Davie Shipbuilding Company's Plant No. 4 at Levis, Quebec, for a remanufacturing plant.

Our main mill is 85 ft. x 500 ft. When installation is completed we will be able to resaw and dress 25 cars per day.

We are installing Yates Fast Feed machines and each machine will be driven by a separate motor.

Our plant is now shown in the Railway Tariffs as a stop off point for re-manufacturing in transit.

Our yard capacity will be about 15,000,000 ft. Our dry shed capacity will be about 1,000,000 ft.

We expect to start operating about the third week in September.

We will have in stock at our Levis yard by the last of September 5,000,000 ft. of dry merchantable spruce and 4,000,000 ft. of merchantable B. C. fir timbers.

We solicit your inquiries for rough or dressed spruce, rough or dressed fir or for milling in transit.

Now Ready!

Our 1920 Cut of

Red and White Pine

Our new cut is now available for all your requirements in Red and White Pine. It has been logged from the same excellent Pine growth as our 1919 cut, and represents the same care in manufacture. You can, therefore, be certain of the right quality and good value in all grades. If you want it dressed tell us.—We have planing facilities.

It will be as well for you to get in touch with us early, so that we are able to give you the best possible service.

Every Minute of Every Day Service—Satisfaction

Broad Claims? Indeed! And we fully realize what responsibility we shoulder by making such claims.

That is why we constantly strive to give just a little better service and satisfaction than is ordinarily given. And that is why our customers say they like our way of doing business.

We will welcome your inquiries in regard to any of the items listed below as an opportunity to show you what our Service and Satisfaction policy mean.

QUALITY

Will bring the Customer Back When Price Won't!

THE customer who comes back to you season in and season out invariably does so because of one thing—he gets satisfaction from the lumber you sell him.

That satisfaction can come only from quality lumber.

Your service may be good, your prices right—but it's the quality of the lumber you sell that counts.

Just now we have some splendid stocks on hand that, we believe, would interest you in Pine, Spruce, Hemlock, B.C. Lumber and Timber—quality guaranteed.

We have absolutely no connection with or interest in any other firm bearing a name similar to ours.

This is a good time to conserve your capital by making your purchases in this manner.

If You want the Best Value in Lumber Obtainable in the Mountains, Your Choice Should be

Golden Spruce

GOLDEN AIR-DRIED SPRUCE is unequalled for your requirements in Boards, Shiplap, Shelving, Flooring and Siding, and you can rely upon getting DEPENDABLE GRADES.

EASTERN RETAIL DEALERS will find 1 x 8 GOLDEN EXTRA SELECT SPRUCE BOARDS an exceptionally good seller. Can be worked to any pattern desired. Supplied either 3/4 or 25/32" thickness. Try some.

We also manufacture Fir and Cedar.
Spruce, Fir and Cedar Lath.

Just another reminder—Our stock always comes to you bright, clean, and newly milled, being run through the planing mill at time of shipment.

With a daily nine-hour cutting capacity of 180,000 feet, and a stock of 10 to 20 million feet at all times, we are in position to give prompt shipment. Urgent orders given special attention.

HARDWOOD LUMBER

THIRTEEN BAND MILLS
SIX PLANING MILLS
ELEVEN FLOORING UNITS

ANNUAL CAPACITY:
130,000,000 feet.

About a million logs each year are cut into beautiful hardwood lumber on our saw mills.

These mills are located in industrial villages which we have built in the mountains, in the heart of the forests primeval.

We regret we are not able to give you a panoramic view of these ideal industrial villages. The surroundings and the plants make a delightful picture of industrial beauty and sylvan charm.

In these villages we have other interests than our plants and lumber.

There are good SCHOOLS and CHURCHES, which we liberally support. In order that the schools may be the best, we give thousands of dollars annually to supplement state funds to employ teachers.

There are COMMUNITY CLUB HOUSES, which we have built and turned over to the community. These are adapted to various pleasant uses. They are used for theatrical and vaudeville entertainments, moving picture shows, pool, billiard and various other community diversions.

There are TENNIS COURTS, BALL GROUNDS, and provisions for other out-door games and recreations.

Incidentally, on the yard at every plant there is about 8,000,000 feet of choice hardwood lumber.

And because we have superior mill villages, and give our employees superior treatment, and receive superior service from them, we are able to give our patrons

Simonds Band Saws

Founded 88 years ago, and conducted on the principle of producing only the highest grade of saws, the Simonds Manufacturing Company to-day maintains its supremacy in its field of endeavor. Simonds Solid Circular, Inserted Tooth Circular and Band Saws of all sizes, and for devious kinds of work are standard of quality and known throughout the world. Simonds Band Saws are of the toughest alloy steel, are strong and durable and hold their keen cutting edge longer. They stand heavy feed and cut smoother than other makes.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.
Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.
Entered as second-class matter July 18th, 1914, atthe Postoffice, at Buffalo, N. Y., under the Act of Congress of March 3rd, 1879.

Vol. 40 Toronto, October 1, 1920 No 19

Getting After the Sawlog Pirate

In former days when all timber was cheap and more accessible, driving operations comparatively careless and easy and wages low, the value of a saw log was not nearly as great as it is today. In fact, it is not so many years since that the forest was looked upon as a mine and plundered for whatever kind of wood was desired. Little thought was given to conservation or reforestation, and the worth of the natural product was less than one-third of what it is today.

Time brings in its wake many changes. The things that are cast aside today as of little or no monetary consideration are the ones which on the morrow become valuable. Too often is unappreciative thought given to that which is at hand, and it is only when deprived of some object, that we fully realize its place in the scheme of things. In years gone by for the farmer, settler, or backwoodsman to haul a stray or vagrant log out of a stream, pull it upon the bank and eventually cut it for fire wood, split it for rails or put it to some other use, was not thought to be out of the way. The average lumberman did not look upon the practice much more seriously than the average farmer or fruit grower regards giving a schoolboy a few apples from his richly-laden orchard. Frequently privilege descends into license and then into lawlessness. Concessions courteously extended are sadly abused and good nature imposed upon to a degree that is past human toleration.

For many years lumbermen in the Georgian Bay district had logs stolen. The practice grew so in extent, that to stop the thieving, the Log Pickers' Association was formed, consisting of the leading firms in the Midland district. This association employs regular log pickers, which are authorized to pick up derelicts bearing any lumberman's marks, and there has been a regular accounting among the firms. But even the vigilance of this well-organized and well-managed association has been eluded and the log pirates have, it is reported, been doing a thriving business during the past two or three years since timber became so valuable. Thousands of feet have been stolen and every effort been made to cover up the trade mark of the various firms either by sawing off the ends or otherwise defacing the "insignia." Lumbermen, as a rule, are generally good-natured and are not penurious, but to have their product corralled by unscrupulous individuals, has resulted in prosecutions in the Parry Sound district. It is hoped that the prompt and effective action which has been taken, will prove a deterrent to a practice which has been growing alarmingly of late.

Some years ago the Timber Marks Act was passed, making it a criminal offence to pick up logs, bearing the registered marks of lumbermen, or to cut off or deface the marks. Heavy penalties were imposed, but these levies did not deter operators in the business. It is charged that one log picker had gathered as much as 400 logs, which he had stored away, and it is alleged that certain persons have acted as a "fence" to some of the log pirates, and bought the timber bearing the stamp of Georgian Bay lumbermen. It is even contended that the log pirates have not only been paid a smaller price than the market values for what timber they have gathered, but also have been victimized in the measurement.

Nowadays a lumberman has to put up with sufficient worries without in any way having his logs taken by means that are neither honorable, just nor fair. It is to be hoped that the action, which has been instituted by the authorities in the Georgian Bay district, will have a salutary effect in checking the free and lawless manner in which certain persons have in the past gone about stealing timber. It is stated that as much time, patience and care have been exercised in capturing logs belonging to leading operators on the Georgian Bay, as the ardent angler exercises when setting out for a big catch of bass, pickerel or pike on a regular midsummer holiday. The fish, however, are the legitimate harvest of any law-abiding citizen or true sportsman, but logs, which have been lost in toeing or driving or escaped from booms or ponds are not released from their original ownership.

The Log Pickers' Association has done a good work and is operated with satisfaction to the various firms concerned, and is taking action to stop the purloining of their property, the organization deserves the support and encouragement of every law-abiding citizen.

What Team Play Will Do in Mills

Safety week will be observed in Ontario during the week starting Sunday, Oct. 10. The idea was conceived by the members of the Ontario Safety League and various other organizations in the safety line co-operated with them in an extensive drive against accidents. The object is to teach accident prevention to every man, woman and child, and an impressive and somewhat unique educational campaign was carried out. The methods served to arouse much interest and excited the curiosity of even the most indifferent. Posters, letters, advertisements, meetings and safety shows provided liberal enlightenment and the schools and colleges, boy scouts, moving picture houses and others all joined in the splendid work. It has been estimated that from 80 per cent. to 90 per cent. of the accidents which occur from day to day, whether in factories, on the streets or in the workshops, could be eliminated with care, thought and judgment.

Wherever an extensive campaign has been conducted, the results have been most gratifying. This is evidenced by the outcome of the recent "no accident" two weeks in the Spanish River Pulp & Paper Mills. Two thousand men are required to operate these plants night and day in Espanola, Sault Ste. Marie and Sturgeon Falls. The result of the propaganda, united effort and team play of this vast army of employees was that there were only two minor accidents. At the Sturgeon Falls plant, which was recently visited by the members of the Ontario Retail Lumber Dealers' Association on the occasion of their annual trip, there was not a single mishap in any of the departments. This is, indeed, a creditable showing.

The object of the campaign was to instill carefulness into the minds of all the men and women employees of the company, and the splendid result goes to show what can be done when a group of

people make up their minds to accomplish a certain thing. During the corresponding weeks of the three preceding months, the total number of accidents in the three mills were: May, 37; June, 36; July, 29. The reduction from this to two demonstrates the possibilities of educating and arousing workers to aggressive effort in a good cause —one which should enlist the sympathy and support of all, not only the men but also the heads of departments and the executive staff. The methods adopted by the Spanish River Mills were striking and significant. An electric "safety sign" hung over the time office; every employee wore a red "no accident" tag, and the mills were carefully posted with various bulletins. The superintendent and foremen met frequently previous to the inauguration of the campaign and discussed ways and means of giving effect to the movement.

A recent issue of the Spanish River News contains the following summing up of the propaganda:

Next year we will try again a "no accident" two weeks, and hope for a clean record. Simply because the "no accident" fortnight is over is absolutely no reason why we should not see a very considerable reduction in the number of accidents in our mills. Heads of departments and superintendents should see to it that safety appliances already in place are kept there. The moment a safety appliance is removed for repairs and the repairs are finished, that appliance should immediately be returned to its proper place. Employees observing dangerous places should report the places at once to their foreman or superintendent, who will see to it that the hazardous place is properly guarded. We are sorry the sheet is not absolutely clean, but the record as it stands is nothing to be ashamed of.

Motor Delivery for the Retailer

One of the live issues at the present time in connection with any business is the reduction of overhead costs and to render at the lowest outlay the best service possible without in any way impairing its efficiency or value. The retail lumberman has many problems to solve and among them distribution is, possibly, as perplexing as any that arise. How the best service can be provided in the most economic manner and the forest products handled expeditiously, has caused a great deal of discussion regarding ways and means. There is no doubt the motor truck is constantly playing a more important part in the work of the retail lumber yard. In the cities the truck has long occupied a foremost place but in certain rural communities there is still some doubt concerning the wisdom of purchasing and operating one.

With a view to presenting full information on this phase of lumber merchandising, the "Canada Lumberman" has obtained the opinions of representative dispensers of wood goods in various parts of the Dominion. Many strongly favor the possession and employment of a motor truck—in fact, would not do without it, while others are equally decided that in their own case, it would not pay them to install such a convenience, and point to peculiar, local conditions.

In this issue there is presented arguments, pro and con, with respect to motor service and delivery, and it will well repay any retail lumberman to approach the question with an open mind and find out all that he can regarding the original cost, maintenance, operation, uses, etc., of a truck. Some figures are given comparing the expenses of owning and operating a truck with that of delivery by horse and wagon. There are also various other features touched upon which will prove interesting and instructive.

In succeeding issues further reference will be made from time to time to this important matter, and the latest data presented regarding disbursements, service and other items, which enter into the consideration and adoption of this modern means of transportation. In the more populous centres the truck is used almost exclusively by lumber dealers where the streets and country are fairly level and the roads good, but in some of the rural sections much has been said against the motor and the advocates of the horse and cart are still quite numerous.

The Hazard of Lumber Operations

In what is the average man in the lumber trade most interested? Of course his viewpoint depends largely upon his sphere of operation and his angle of observation. It is not always easy to tell what is going to happen in the future or to gauge conditions aright, and yet it is in speculative subjects that the chief concern is aroused.

It has been declared that facts, not fiction, actualities and not theories are required in this hardheaded, matter-of-fact age, and yet the majority of those identified with any vocation are apparently much more keenly aroused in what is going to transpire than what has happened, for facts must come under the latter category and prediction or speculation under the former.

It is in the nature of things that nearly all like to make investments, to cast about for fresh sources of revenue, to locate in new quarters, to buy certain stocks and become associated with new companies or financially concerned in development propositions, etc. Such a trait is universal and fundamental. It is this disposition—call it restlessness or discontent if you like— which builds communities, erects factories, affords employment, opens fresh avenues of activity, exploration and settlement, keeps the wheels of commerce moving and puts capital in circulation.

All of this resolves itself into the speculative. It is this same implanted human desire or curiosity which has enabled many a promoter, fortunte-teller or mountebank to reap a quick harvest. In a business sense the same trait prevails, although every move made is more or less of a gamble with the future, a contest with new conditions or contact with fresh problems.

There is no business in which this element or challenge enters to the same extent as that of the lumbering, the exponent of which, in all his operations and plans takes chances on the weather, the snow, the rainfall, condition of the labor market, transportation, etc., as well as with fire, flood, hurricane and other devastating forces. When he meets with a measure of success surely he is entitled to the well-earned reward, for who takes heavier risks than he?. Those who battle in the forefront, whether in war or peace, in the natural course of events, receive the honors. The highest recompense usually goes with heroic performance or masterly achievement.

Getting Proper Price for Product

At a meeting of the directors of the Audit Bureau of Circulation held recently in Toronto, considerable discussion took place on matters affecting the Canadian situation. Stanley Clague, managing director of the bureau, made some timely observations on the newsprint situation. He said that to his mind the publishing business is the worst example of merchandising in the whole realm of business and that it was particularly so today in view of the shortage and consequent high price of newsprint. "Can you," he said, "point to any other business where the finished product is sold for less than the cost of the raw material and yet with but few excepions the subscriber of the daily newspapers of Canada pay less for them than the publisher pays at the mill for his newsprint. The advertisers are, therefore, saddled, not only with the whole cost of news service and publishing, but with a generous portion of the newsprint cost as well. The proposition is not fair and it is not good business."

He believed that the solution of the problem was to increase the price to something near the equivalent of its value. Newspapers that are sold at 2c a day, should be sold for 5c. In the United States there is a marked movement in this direction and in the south and west the majority of the best papers are sold at 5s. Nothing was to be gained by raising the single copy price of a paper in the city to 5s. and then selling thousands of others at a ridiculously small monthly or yearly rate either through news agents or to subscribers. Mr. Clough paid a high tribute to the Canadian newspapers and said they represented the highest type of journalism on the North American continent. The publishers of Canadian dailies should be proud of the product they serve to the general public.

Does Motor Delivery Pay Retail Lumberman?

Experience of Various Firms in Truck Operation—Its Economy, Efficiency and Service Pointed Out—Objections Raised by Rural Dealers

Truck Economy.

The fundamentals of motor truck operating economy might be summarized under four points:

1. The ability of the truck to do its work.

2. The efficiency of the maintenance and inspection system.

3. The efficiency of the routing and delivery systems.

4. The skill of the driver and his willingness to perform his work well.

Does it pay the average retail lumber man to use a truck in his business? This question has been discussed many times in the "Canada Lumberman," and it is interesting to learn what the readers of this paper have to say on a subject of such wide and outstanding importance. Opinions naturally suffer and whether it is economy for the retail dealer to employ such a convenience would on the whole seem to be answered in the affirmative.

Here are the views of representative lumber merchants from many sections of the country and a perusal of them is worth while:

A. Coates & Sons, of Burlington, Ont.—We have only operated a truck for one year, hence we have not had the experience of some of our friends in the business. However, we will endeavor to give you our views on the subject. We are using a 1¾ ton Packard. This, we figure a two-ton capacity without overloading, and we give you below the cost for operating the truck for one year, including gasoline, oil, repairs, depreciation, as against our team for same period. Our reason for a two-ton truck is that it will replace the team, as a team load is about the usual size that we want to deliver in our town and district. It may be different in a city on paved streets. We are situated about three blocks from the station, at which we unload our lumber, and find the truck very economical for this work. The truck does not stand while the load is being put on, as we use the lumber buggies, and have the truck equipped to handle them. We also have a hard rubber tired, two-wheeled trailer, which we employ when the load for delivery exceeds the carrying capacity of the truck. This, of course, works out much better on long hauls. The old saying is just as true in the lumber business as in men's furnishings, "That you might just as well be out of business as out of date." The merchant who does not keep pace with the time will soon go back, and this is the principal reason for using a truck today. We are unable to give you the quantity of lumber handled. The truck travelled 10,000 miles and cost in twelve months $890 for gasoline, repairs, etc. The cost of maintaining a team for twelve months was $513.00.

Considers Trucks Cheaper Than Horses.

D. C. Baird, St. Marys, Ont.—I use two Ford one-ton trucks which we usually load up to two tons to a load and as yet have never had any trouble to handle around the town which is very hilly. I am very much in favor of motor trucks in comparison with horses, as I consider them by far the cheaper, both as to upkeep and saving of time in labor, which is a great item in the cost of running any business in the present day. In comparison as to upkeep, my garage bill for two trucks averages about $25,00 per month, whereas the cost of feed alone for one horse which I use for my work during the four winter months, averaged $21.50 per month.

The trucks are used for delivering lumber and boxes and also unloading cars of lumber. I have about a mile to draw lumber from the station to the mill. Here is one place that I find considerable saving in time, as my trucks average 10 hours work daily, every day it is fit to work. With the horses it took 1¼ hours for every trip to the station for a load of lumber, whereas the trucks make it in three-quarters of an hour. Usually a teamster wants to get his horses in the stable about a quarter to six or a quarter to twelve. With the truck I claim that we can generally make two extra trips, as the man knows when he gets into the yard when the whistle blows that he has no team to feed.

As to the delivery of boxes, of which I do considerable, some trips are 25 mile trips which, with the truck, we have no trouble to make in five hours' time but which could not be made with horses. I also find that it is much easier to get men to run trucks than to drive horses. This is my third summer for using these trucks and it has not cost me over $30.00 a year for each truck for any repairs and overhauling, which I have done every winter. They are then in No. 1 shape to start work in the spring. Heavier trucks might do the work better but for upkeep I do not think that they can be beat, considering the outlay and all repairs for these trucks are easy to obtain.

The Details of Cost Outlined

The Corrigan Lumber & Mill Co., Sault Ste. Marie, Ont.—We have been operating a one-ton truck of a very well known make for the last two years. Our 1919 experience is listed below, and covers almost exactly two hundred dollars:

Upkeep of tires	$ 70.95
Engine oil	53.26
Gasoline	299.43
Painting and adv. on truck	43.20
Repairs	234.45
Depreciation actual	113.50
	$814.79

Deliveries of truck averaged twenty-three per day and these totalled to forty-six hundred or an average cost of .17.7 cents per order delivered. Our average wage to truck driver was $4.50 per day or an average charge of 19.6 cts. per order delivered—a total of .37.3 cts, per order. This does not include insurance, interest on investment or other overhead charges.

We have single horse with necessary equipment, and although each trip is usually shorter than with a truck, we find that the cost per order delivered is 72.66.

D. Aitchison & Co., Hamilton, Ont.—We are using at present a one-ton International truck, and find that same for the retail lumber business is equal in service to two or three single delivery wagons, and can make good time on extra long trips. We have operated this truck since the middle of the summer of 1919 and to date have really had no expenditure on it other than the cost of oil, grease, etc. We think that the one-ton truck other than the make is the ideal truck for the retail lumber yard where you have mouldings, frames, sash, etc., to deliver at odd times. We believe that the upkeep of a larger truck where work is not always to capacity would be too great and would not justify itself in the end. We had a one-ton truck in operation in our Eastern yard where a greater quantity of rough lumber is handled, and found that it would not stand up day after day loading to capacity.

Motor Trucks Are Big Saving.

Batts, Limited, Toronto.—We use two motor trucks in our business, one one-ton Ford with attachment and one 3-ton Gramm. We consider these two trucks take the place of five horse-drawn vehicles. The cost of upkeep of the same is well under the cost of team haulage, although we are forced at all times to keep several teams on the road to take care of loads going to places where trucks are unable to travel with safety. We also employ different motor cartage companies' trucks to take care of our ever increasing business and find it a saving, as good truck drivers are the biggest source of trouble we have to deal with today.

The Ingleby- Taylor Co., Brantford, Ont.—We are using two trucks for delivery purposes. We put our first truck in operation two years ago and we were so well pleased with its performance that we purchased another last year. Our first truck is of 1½ tons capacity, has an Oakland engine of 30 h.p. and a 12-ft. platform, well adapted for drawing long stuff. Our second truck has a Ford engine and 8-ft. platform, 1-ton capacity. We have found that the operation of these trucks is considerably less than it would be for delivery by horses, as they take the place of from four to six horses. We are also able to give much prompter service. We have found in our business that the lighter trucks are the best proposition, as nine times out of ten you do not have a capacity load, and finally that the trucks show up to better advantage on long trips—that is where we frequently have deliveries to the opposite end of the city.

George Rathtbone, Limited, Toronto.—We are now operating two trucks, one 1¾ ton Stegenan truck, which is six cylinder and

has been in use for two seasons. In figuring the mileage against the expense and depreciation, we estimate that it has cost us 31 cents per mile since it has been in operation. The other truck has only run about a year and we have not got our costs compiled on this one as yet.

Barrett Bros., Ottawa, Ont.—The only motor cars that we use in our business are two small Fords. We use them for light delivery and long roads. We find that the maintaining of these cars is quite expensive. As a matter of fact the repairs in one year will amount to the original price of the car. On the other hand, we consider that we do as much work with one of these small trucks as we do with three single deliveries, and not only that but we serve our customers much quicker and in that way it helps to secure business.

Distinct Saving Over Horse Delivery.

The Irvin Lumber Co., Limited, Toronto.—We use five motor trucks, two 3-ton, one 1½-ton, and two 1-ton trucks. We find that for long trips and full loads the trucks are of great advantage as compared wtih horse delivery. We find the small trucks better than the large where they have to travel over sandy roads, and it is not

The illustration shows a trailer which D. C. Baird of St. Marys, Ont., uses with one of his trucks. The load consists of 140 bunches of XXXXX shingles, which makes a rather bulky burden but Mr. Baird says he has no trouble to handle the same, even when coming up a good grade such as from the station at St. Marys. He also uses the trucks for trailing waggons and is able to trail a waggon with 1500 ft. of lumber to any place in his yard or shed. Mr. Baird uses two Ford 1-ton trucks in his business

often that our customers order more at one time than a small truck will carry. Repairs and upkeep on trucks are very expensive, but considering the amount of material hauled we do not think team delivery would be less expensive. However, we have to keep some horses for delivery in localities where it would be impossible to take a truck, and we use the horses for short trips and mixed loads.

The greatest advantages of trucks are:—

1st. That they enable us to give more prompt delivery to our customer.

2nd. We can take business at a distance that would be too great for horse delivery.

3rd. One man driving a truck can deliver from two to three times as much lumber in a day as he can with a team of horses excepting, of course, where the trips are short.

4th. During the winter season when business falls off we can lay up what trucks we do not need, and when they are not in use they do not have to be looked after and the only expense that can be charged against them when not in use is interest on the investment. This is a distinct saving as compared with horses which have to be attended and fed whether at work or not.

Say Horses Are Best For Them

The Guelph Lumber Co., Guelph, Ont.—We do not use any motor trucks in our business here because after carefully going into the matter we have come to the conclusion that we can make our deliveries better with horses and wagons. We are figuring this, of course, from our own requirements and the requirements of our customers in and around Guelph.

You will readily understand that in operating a retail lumber yard the majority of deliveries are in small quantities. We use single horses and wagons all the time, and they enable us to deliver the goods often times at a spot where a truck could not reach, that is behind a building or over unbuilt-on land, and then as you probably know we are not blessed with very good roads in Guelph, some of which a truck could not operate on.

Brookfield Bros., Halifax, N. S.—We do not operate any motor trucks, our deliveries all being made by horse power. We are, therefore, unable to give you any particulars based upon experience regarding the comparison between the two. We might, however, say that, owing to the fact we operate no motor trucks, it would appear as if we are not quite yet convinced that it would be to our advantage to make the change, in the peculiar circumstances under which we operate; that is, the bulk of our materials coming into stock have to be hauled only two or three blocks, and ours being a wharf premises are somewhat congested. Though we have on one or two occasions had experience with motor trucks, we have not decided that any advantage would be reaped through making the change. We may add that we do all our trucking by piece work with teams, which appears in our case to work out satisfactorily all around.

N. Cluff & Sons, Seaforth, Ont. We use horses for delivery purposes in our lumber and coal business. We do not think that motor trucks would suit our business, because of the long spell of bad roads in spring and fall, and the amount of snow that we have in the winter would confine their use to about six or seven months in the summer and autumn. The balance of the year we would have to use horses, so we believe that it pays us better to employ them all the time. There are a good many places that a horse can go where it would be impossible for a truck in any season.

George H. Belton Lumber Co., London, Ont.—We would say that we have never purchased a truck. From time to time we have had one hired and concluded that to put a truck into constant service would not pay us. When we get extra busy we add more horses. The depreciation on horses is much less than on a truck, and the upkeep much less proportionately for the service obtained.

Could Not Do Without Motor Trucks.

James T. Gilchrist Lumber Co., Toronto.—We have been using a 1-ton truck for several months and the service we are able to give our customers is such that we have bought another. We find that the cost of upkeep is about the same as for a single horse and wagon, but the deliveries are two if not three times as numerous. There is no trouble about holiday or Sunday feeding nor any such difficulty as we experience in disposing of the stable refuse. We certainly could not do without motor trucks now and give the service (which is everything nowadays) that we are able to do, without the addition of three or four single horse wagons and this would mean a man to each—a large increase to our wage bill. There is only a little drawback to the trucks for our business and we refer to the length of the chassis. A considerable portion of our deliveries call for long lengths, 14 and 16 ft. and sometimes longer. These lengths mean that about half of the load is overhanging the back axle which is a bad feature, but apparently you cannot avoid it with the light truck.

W. A. Nichols, Carleton Place, Ont.—We do not use a motor truck. The snow is too deep down here in winter to run a truck, and as we require horses for bush work in winter and around our plant here, we go ahead and work them in the summer. If we could use trucks the year round we would have them, as we could get faster delivery.

J. J. Grant, New Glasgow, N. S., states that he does not use a motor truck and believes that so far as his own operations are concerned, team haul answers his purposes more economically and satisfactorily.

Depends on Town and Yard Location.

James M. McBride & Son, St. Catharines, Ont.—Regarding truck vs. team haul, we believe it all depends on the size of the city or town, the location of the yard also the length of the haul. We do not use a truck as we are situated in about the centre of the city and two hundred yards from the railway siding and find that most of our deliveries are short hauls. In unloading from the cars and delivering we use one horse and two wagons and can handle more material that way than we could with a truck, as most of the time is taken up in the loading and unloading.

We could not do without the team haul, as a large amount of our deliveries are on new streets that are just being opened up and, during wet weather and in the spring and fall, it would be impossible to deliver by truck. We also have a number of deliveries where we have to haul over new ground to get the material as close to the buildings as possible and into many places that we could not get to with a truck.

This year we have had more longer trips than usual and believe that, under good road conditions, a light truck would save a lot of time in taking care of the long hauls, also the small orders which take as much time to deliver by team a full load.

R. W. Nicholson, Strathroy, Ont.—We do not use a motor truck. The reason being it would be necessary for us to keep horses as well for delivering, as we could not deliver with a truck in the winter time. We think that in the city where they have good roads the motor truck would be an advantage.

Further expressions of opinion in the discussion and consideration of this timely and important subject will appear in the next issue of the "Canada Lumberman."

Interesting Woods Activities by Ontario Firm

How the Pearce Company, Marmora, Carry on Their Busy Operations in the Bush —Methods Employed in Taking Out Hardwood in Hastings County

By T. J. F. Sharpe and J. L. Alexander

The operations carried on by the Pearce Co., Ltd., Marmora, Ont., are wholly the production of lumber at their saw-mill, situated in Marmora. None of the limits held in Hastings County by the company was secured directly from the Government. This area in Lake Township was originally held by three companies, viz.: The Gilmour Lumber Co., The Rathbun Lumber Co. and the Marmora Cooperage Co. The Gilmour and Rathbun Companies logged through the area, culling out the white pine only, as is indicated by the present stands. This was about forty years ago. The Pearce Co. took over the limits from these companies and are now taking out hemlock, pine and hardwoods. The hemlock being the most valuable commercial species; the pine mostly large, isolated trees, which were apparently considered inaccessible at the first cutting.

In Lake Township there are approximately 23,000 acres of burned over land, mostly in the north-west corner, north of Tangamong Lake. This area is now stocked with poplar and birch, from 15-30 years, and an occasional pine sapling or pole, not in sufficient numbers to re-seed the area by any means, although in some few places it occurs in groves.

Judging from an area in the southern part of the township the fires were severe enough to destroy the soil and now it is estimated from 30 to 40 per cent. of the burned-over area is bare rock.

Originally the lumber companies had to provide two rangers during the fire season, but at the present time this is arranged by the Government and the company pays for protection at the rate of $6.40 per sq. mile per annum (one cent per acre per annum). In addition they pay $5.00 per sq. mile per annum ground rent.

Contracts are made in a small way with farmers in the neighborhood. At the time the operation was visited two gangs were working, three men crews felling and bucking a certain amount, and then skidding the same. The contracts only call for felling bucking and skidding, the contractor providing men, equipment and provisions. The company cuts all trails, haul roads, etc., and drives the stuff. The average d. b. h. runs about 16 in., and the total stand per acre from 3,000 to 4,000 F. B. M. The reproduction of hard maple seems to be fairly dense and the stand would be considered over mature.

The mixed swamp type, occupying from 150 to 200 acres of the area, or from 12 to 16 per cent., is composed largely of cedar poles.

Pine and hemlock logs in skidways of Pearce Co., Marmora, Ont.

There are, however, some cedar logs and some black ash. The minor species are black spruce, elm and an occasional white pine.

Conditions of the Timber.

The logs, on the whole, are fairly sound. The basswood and hemlock show butt rot in many cases. Basswood, however, is utilized here with an outside ring of wood 4 in. wide. In the case of the hemlock the rot necessitates sawing off from 3 ft. to 6 ft. from the butt of the tree.

As regards straightness, from looking over the skidways the logs run mostly to twelves. Usually they run three to a tree, but in rare cases five have ben obtained. The logs, on the average, run as follows: Pine, 88 F. B. M., basswood, 67; ash, 60; hemlock, 70; cedar, 32; elm, 162; spruce, 46.

The drainage of the whole of Lake Township is divided between Beaver Creek and Deer River, both of which flow into the Crow Rver, which, in turn, flows through Marmora. The major portion of the township is low and rolling, with no bad mountainous obstructions and easy approaches the lakes.

The camp is located on an old cadge road built 22 years ago. This, and the fact that all parts of the operations are within two miles of this point, were the important factors in the selection of the site. The camp is six miles from the main road from Marmora to Vansickle. About 150 feet from the buildings there is a small stream from which water is carried in pails for drinking, cooking and washing purposes, and at which the horses are watered. From this camp 1 200 acres are being logged, and this, according to the foreman, is the average area logged from one set up.

Decking with chains in the Pearce Co's. operations in Hastings County

The camp occupies one-half acre and comprises the following buildings: (1) bunk house; (2) cook house; (3) meat house; (4) stables, (5) office and van, (6) men's accommodation.

The camp is built to accommodate 50 men and the stable from 12 to 15 teams. The material used in construction is logs, mostly, with lumber floors and roofs. Tar paper is used on the roof and gable ends, and the walls are chinked with mud.

A warping crib or craft is used, 24 ft. x 24 ft., constructed of two tiers of cedar poles at right angles to each other, with a capstan in the centre. One hundred yards of 2 in. rope or warping line and tow are required. An anchor is attached to the raft. The crew consists of 2 horses and 12 men (this number varies). The crib is used when towing the logs through the lakes and there is, therefore, one in every lake.

The tote road leading to the camp is six miles in length, i.e., from the Vansickle-Marmora Road. The principle in laying is to follow the line of least resistance and it is extremely snake-like in appearance. There are several fairly steep grades and the limit of a team is about 1,200 lbs. The Pearce Co. have not made any improvements on the road. In reality it is an old Government road put in some 22 years ago.

The logging roads follow the ravines to the water. The slopes are very slight. Only one case was noted, where the grade is sufficient to demand sanding when hauling commences. These roads are 16 ft. wide and everything is cleared off down to the ground, i.e., stumps cut off and mounds levelled down. For this operation there are about 6 miles of main haul road and as much more in spurs, i.e., 12 miles in all. There have been fifteen men (this number varied

working on the roads from the middle of October to the middle of December, but no horses).

The problem of laying out the roads is quite simple. As stated, the area had previously been logged over for white pine, and as the area has not been burned since there still remain traces of the old haul roads. It might be added that these old road beds do not decrease the cost of construction now. In fact the old roads are responsible for a certain amount of windfall which now has to be removed.

How Hardwoods are Logged

In the connection with the logging of hardwoods the procedure is as follows:

The trees are felled in May and June. The bark is peeled from the S. W. surface of the tree, but bucking into logs is not done at this time. The idea is that, by felling in the spring, just as the leaves

Stop log dam erected by the Pearce Co., Marmora, Ont.

come out and leaving the tree as it falls, the leaves help to draw the water from the trunk. The trees are left like this until fall, when they are bucked and skidded. The principle of the whole thing is to decrease the weight of the log to facilitate floating, or, in other words, to make it possible to float these hardwoods. It is being done with maple and beech mostly. The three-man crew will cut 100 logs per day.

Animal skidding with horses is the only method used on this operation. A crew consists of five men, viz.: Teamster, swamper, rollers (2), top loader.

In many cases, when the timber is medium size and the grade allows it, only one horse is used in skidding, the logs, while the other horse is used for decking. Where this is not practicable the same team that skids also is used on the decking line. Whenever possible, however, the skidways are built on an incline and two men can then roll the logs up by hand.

The logs are snaked in over trails which have been roughly made by the swamper merely clearing out the brush, and the logs going over it do the rest.

The trails run up to 200 ft. in length. Various devices are used in decking by the employment of blocks. This largely does away with the necessity of making any trail or clearance. When horses are used for decking they may be at the back of the skidway and in this case no block is used. With one block on the top of the skidway and anchored to the skids, the horse or horses may be at the either side. By using two blocks, one as just mentioned and the other elevated about 12 ft. on a tree in front of the skidway, the skidding team can drag the logs up to the skidway, hitch on to the decking line and place the log.

There is no set number of logs to a skidway. The logs remain on the skids until hauled to the landing. The length of time varies: in this case the landing is on a lake, and the climate will be the influencing factor as to the length of time before hauling. Last year logs were felled and skidded up to Christmas, and hauling was commenced on the first of January.

The skidways are of two types: Flat skidways and high skidways. The high skidway is only used in handling. Several of these skidways were built at various places on the main haul road. This skidway is 5 ft. high and the idea is to bring the logs from near-by skidways, unload them on the high skidway and use them to top off the loads. By using this skidway the spurs from the main haul roads only are very roughly constructed.

The flat skidways to accommodate the logs in the bush, are built about 3 ft. high. Some are level, others on angle. The skids are from 4½ ft. to 5 ft. apart and vary in length. There are two front pieces, and for these small logs or, in many cases, the butt of a tree suffering from butt rot, will be sufficient. These are notched where the skids will lie, to keep them in place. About a foot back from the front and on the top of the skids is another notch into which a pole is fitted. This will keep the front log from rolling off. The material used in skidway construction is whatever is nearest to hand. Much of it should make good logs.

Floating the Logs Downstream

A stream, to be considered drivable, must have a medium current only. If the current is too strong the logs are damaged and if the water is not deep enough, there must, in addition, be good locations for dams.

The water through which the Pearce Co. drive their logs has been driven for the past 40 years and very little work is necessary in the way of clearing the streams. Most of the expense is in the maintenance of dams, and, when necessary, constructing new ones.

Dams are located where the greatest amount of water can be stored with the least expenditure in dam construction. As far as is known all the dams are at the outlets of the lakes. The drive last spring was a seven weeks' job, and the cost for the 25 mile run was about $6.00 per M.

On the area visited the cutting might be classified as "clear cutting." Owing to the proximity of the mill to the actual bush operation, the hardwoods can be driven, consequently everything that is merchantable is taken. The result of the system is a vast amount of debris left in the woods in the form of tops, etc.

At first sight this would appear to present a serious fire menace. However, on closer examination, the whole area is protected on both the East and West sides by natural waterways, and again, it is well protected from the fact that it is surrounded by areas that have already been burned over, and, as far as could be noticed, there is practically nothing on these areas to burn, so we might say that the area is safe so far as external influences are concerned. In view of the above, brush disposal should not be considered.

Damage from windfall is also not serious. The whole township is low, gently undulating country. The elevation at Marmora

Warping crib of the Pearce Co., Marmora, Ont.

is close to 600 ft. and Lake Township is somewhat higher, perhaps averaging from 750 ft. to 800' above sea level. There does not appear to be any part of the country subject to erosion.

The coming stand will be pure hardwood, composed chiefly of hard maple and beech. At the present time there is a fairly dense maple reproduction. No conifer reproduction, whatever, was noticed, except in the swamps, which occupy but a small part of the area.

This tract, situated as it is, viz., easily accessible; in close proximity to drivable streams; the short distance that logs have to be driven to the mill, and hardwoods will float satisfactorily for that distance; and lastly, the demand for those hardwoods, is in a favorable position, in that, unlike other parts of Canada, no effort need be made to make the area anything but a hardwood forest. Nature has provided a dense reproduction of hardwoods, so that the whole future of the area depends on the utilization of these hardwoods.

Unfortunately no authentic data could be secured as to cost of production per thousand of logs delivered to the mill. Felling, bucking, skidding and road construction were the only activities. However, it is understood the cost will not vary appreciably from 1918-1919 which averaged from $12.000 to $15.00 per M.

Urgent Need of Homes to Cure Social Unrest

Every Part of Canada Calling for More Houses—Why is not Greater Progress Made in Their Construction? Observations on Present Day Trend

In nearly every paper that one picks up, the cry is heard for more houses. It is pointed out in Toronto there are annually four times as many marriages as there are new homes, and that during the past year although there was an increase of over 13,000 in population, there were only about 1,500 to 1,800 new houses erected.

This affords an illuminating example of how pressing is the necessity for more dwellings. What is applicable to the larger centres is, in a measure, true concerning smaller places. One interest is blaming another for more work not going on in this or that district and thus the building famine continues. The bricklayer blames the lumberman and the lumberman passes the censure on to labor and labor tosses it to the avaricious landlord, and the landlord declares that he can see no way of securing a moderate return on his investment at present outlay. Thus the popular pastime of "passing the buck" proceeds. This shifting of responsibility, this evasion and dodging the issue goes on. Everybody is blaming everybody else. Some predict that if there was a fall in prices, there would be more activity, and another man declares that the lower prices are, the farther away building will be removed, as on a falling market no one will undertake any construction for fear that prices may go still lower. Then, others seek to place the onus on the railways, claiming that increased freight rates have added so much to the cost of materials that no serious-minded person will think of erecting houses for rent or as a speculation unless absolutely compelled to do so.

Solving the Mystic Maze Problem

Thus we have theories and speculations and economic reasons galore. It is a sort of mystic maze proposition and no daylight enters the inner recesses. Ostensibly it is a case of each interest going it blind or perhaps selfishly, and little that is practical has been accomplished. It would see mto be time that all the interests concerned were brought to a realization of affairs, present and prospective and got down to a hard rock, commonsense basis.

Every part of Canada is in desperate need of buildings, particularly houses, and what is the solution of the matter? It is difficult to analyze the complex issue. At least half a dozen theatres, each costing anywhere from $200,000 up to $1,500,000, have been constructed in Toronto during the past six months, and others are on the way. Still a few thousand dollars cannot, apparently, be expended for the erection of dwellings, the urgency of which is more pressing as each day passes and the approach of winter draws near.

It is expensive to buy houses and doubly expensive to lease. The average person is between Scylla and Charbydis so far as definite results are concerned. We have labor unrest and unprecedented demands for wages, frequent elevations in the price of houses and ascensions in rents that are almost staggering, and yet there is nothing settled so far as the building situation is concerned. All is at sea and unrest seems to grow more pronounced and deep-rooted.

Too Few Are Home Owners.

This brings up the whole question of why more people should not own their homes, or, rather, do not own their homes. Such an institution has long been spoken of as the basis of social comfort, the foundation of happiness and a centre of peace. Home-owning has been spoken of as a pillar in the national structure, and yet it is declared by leading authorities on the other side of the border that less than 60% of Americans own the roof over their heads. F. Roger Miller, general secretary of the Chamber of Commerce of Macon, Ga., recently spoke before the Rotary Club of Stockton, Cal., and said some startling things, over which the average reader may well ponder. Here are a few of them:—

To a mob, rioting horribly through the streets of a coast city, raucous, sweating, strident with threats, the mayor appealed:

"Go home, men!" he cried, trying to beat back the wave of humanity run amuck; "maintain law and order for the protection of your homes."

And the mob laughed.

"We have no homes!" they cried.

Out of every one hundred Americans, sixty are discontented. Three widely separated and independent authorities have set this figure as the ratio of unrest in the United States in amazing and sig nificant statements, simultaneously issued. None had consulted the other in arriving at this conclusion.

Says the military: Sixty per cent. of the American people may be classed as forces of disorder or forces of discontent. Lashed by unrest, nursing grievances vague and half understood or bitterly real, the forces of disorder, reinforced by the drifting forces of discontent, are whispering revolution and the overthrow of the Government.

Says a most eminent statistician: Sixty per cent. of our population may be classified as galley slaves rankling under the burden of drudgery borne without apparent reward of progress, resentful, sullen, almost hopeless.

Says the church: Sixty per cent of all America may be conservatively reckoned as lacking in religion and the qualities that make for higher citizenship.

To the thinker—and every man is becoming a thinker in these solemn times—there is startling coincidentalism in these figures:

What is the matter with the sixty per cent.?

Is there anything pertinent for the thinkers of America in the fact that sixty per cent. of the population of this country do not own their homes; that the ratio of our people who drift from shack to shack, from cheap cottage to dismal flat, without anchorage, without ties in the community or responsibility of property—is sixty per cent.? I think there is.

A Mere Generation of Drifters.

We are no longer a nation of home owners. We are become a generation of drifters, renters, floaters—sixty per cent. of us! Six out of every ten uprooted from the soil, having no claim upon the land, rattle about loosely, a prey to every wandering wind. And then we ask: What is the matter with the country? The old pilgrims were wiser than that. After those bitter winters in Plymouth colony, when the bleak Massachusetts hills were sown with frozen graves, when mutiny and discontent soured the hopeful hearts of the people, the old historian records that "in 1624 each family received a small allotment of land for its own. And after that there was plenty to eat in Plymouth." Plenty to eat and peace in Plymouth because each family owned its own home!

What of the women? The home-making instinct is probably the most persistent attribute of woman. Long after the mating passion has burned itself out and the maternal instinct has died—lingeringly, usually and with recurring pangs—the homing instinct stubbornly endures. Only a woman who dares not tack a picture upon the wall of a rented house, or dig a posey bed in a piece of ground that belongs to someone else, can understand the desolation of the homeless. There are women in the forces of disorder. Emma Goldman is a woman. There are millions of women in the dreary army of discontent.

The Government is depending upon the loyalty of the contented, prosperous, thrifty forty per cent.—upon the home owners of America. The initiative of the successful classes, the contented classes, must somehow bridge the chasm which separates them from the army of the drifting and discouraged. Give the homeless man an opportunity to acquire a home. No propaganda will be needed to arouse the desire in the hearts of the sixty per cent. The home instinct dies hard. It is as old as the earth, as old as discontent, as old as pain. Discouragement has drugged it. Despair has beaten it to the ground. The poison of harbored grievances has stupefied it; but let hope shine upon it for a little while and except for the occasional cases where actual degradation has occurred, you will have a little plant thrusting out eager tentacles—seeking friendly air and rains and the depths of the sane and homely earth in which to root.

When the Forests Give Out, What?

"There is no general expectation that by postponing new building for a few months, marked savings may be realized through future declines in prices," says the Guaranty Trust Co., as quoted by the New York Tribune. "Even should the long-desired definite recession in prices develop it is believed that for some time yet building costs will show at best but slight decline and many think there will be further advances in building costs generally.

"The raw materials for building are available in abundance, sufficient to support the most ambitious building programme and in the lumber industry it is estimated that there is an excess plant capacity of 50%. The supply of materials may therefore, in many cases, promptly be enlarged whenever demand calls for it. Other lines of business enterprises are affected by credit stringency, but most of them show no such marked decline in activity as does the building industry. It appears that the transportation tangle is the primary source of the decline in building operations."

Uniform Order Form May be Adopted

The secretary of the Ontario Retail Lumber Dealers' Association has sent to the various members of that body a copy of the official order blank of the State Retail Lumber Associations of New York, Michigan, Pennsylvania, Ohio and Indiana.

At the last annual meeting of the O. R. L. D. A., a resolution was carried to the effect that the Trade Relations Committee, along with the secretary, be empowered to draw up a blank order form that would be suitable for all members, and that legal authority be consulted with a view to having the form made as binding as possible. It was agreed that before any standard form should be adopted, that the opinions of the members should be obtained, and if favorable, the ordering of these forms in large quantities would be gone on with.

Secretary Boultbee has received a number of favorable replies, and the accompanying order form, (which is published again in order

Official order blank of the State Retail Lumber Associations of New York, Michigan, Pennsylvania, Ohio, and Indiana

that its various features may be studied), has received hearty approval on all sides. The order form is used a great deal by the retailers of the five states named. It is very simple and covers conditions in those states as comprehensively as possible.

Two or three important points are worth noting, and one is that a carload of lumber, unless otherwise specified, shall consist of not less than 50,000 lbs. The terms are reproduced here in a little larger type in order that they may be carefully studied. They are: "Substitutions will not be accepted. Terms, freight, net cash; settlement for balance to be made in ten days from delivery at 2 per cent. discount for cash, or ninety day note or trade acceptance each from date of invoice. Remarks: Government tax and any advance in freight rates to be credited to purchaser. All flooring, ceiling and siding and partition to be bundled. All material not up to grades and specifications, whether in part or carloads, will be unloaded and held at shipper's expense and distribution."

Supplies of British Columbia Interesting East

Eastern capital is watching with keen interest the development of the pulp and paper resources of British Columbia, declared Mr. Wendell B. Farris, Vancouver, on his return from a visit to the big cities of the Atlantic seaboard on a combined business and pleasure trip.

Mr. Farris says that it is anticipated in American centres that the high prices for pulp and paper will continue for some time to come. British Columbia is regarded as the last big source of supply of pulpwood.

Superintendent for Forests Department

As announced recently in the "Canada Lumberman," reorganization is being planned in the Department of Lands and Forests of the Ontario Government. The Deputy Minister, Albert Grigg, will be relieved of some of his heavy duties by the appointment of a Superintendent of Woods and Forests. E. J. Zavitz, who is at present head of the Forestry Branch, will be appointed to the new position at a salary of $4,500. He will bring the Forestry Branch under the new head and will be given an assistant, who has not yet been named. The Woods and Forests branch was formerly under a head clerk directly under the Deputy Minister. Other minor changes are contemplated to fit into these arrangements.

New Pulp Company for Labrador

Major Daniel Owen; of Annapolis, N.S., who accompanied the planes and flying boat which about a year ago visited Labrador, interviewed in Montreal, stated that 15,000 aerial photographs of the country had been taken and elaborate estimates of over 2,500 square miles of the country made. The expedition wound that behind the 20 miles of coast line there lay one of the most generously forested regions in Canada. In consequence of this exploration, Major Owen said that a new company has been organized, the Southern Labrador Pulp and Paper Company, in which United States capital has been interested with the idea of installing a pulp mill, with four sawmill units of 50,000 feet per day capacity, which will begin operations in the district next year. James Munroe, president of the Canadian Cordage Company, and director of the Imperial Tobacco Company of Newfoundland, is a member of the new company.

Ontario Leads in House Building

The end of the year will have seen abont 2,200 houses erected in Ontario under the Ontario Housing Act, 1919. During last year 1,184 houses were erected and 1,000 have been erected or are in course of erection in 1920. The total costs of these houses and the land on which they were built is approximately $8,800,000. The persons who have received loans have contributed toward the cost of the houses over one million dollars. About two-thirds of the houses have been erected on lots already owned by the persons building. Ontario leads the Dominion in the matter of municipally and provincially assisted housing.

Complaints Against Penalty Storage Charge

A recent despatch from Washington says that the American National Lumber Association has filed with the Interstate Commerce Commission a complaint against the $10 penalty storage charge on lumber held for reconsignment beyond the 48 hour free period.

The complaint names John Barton Payne, director general of railroads, as agent, and the railroads generally, as respondents. It is the usual form of complaints filed before the commission attacking the reasonableness or lawfulness of rates, rules or practices of carriers.

The complaint asserts that the $10 penalty storage charge is unjust and unreasonable and in violation of Section 1 of the Act to Regulate Commerce and Section 10 of the Federal Control Act.

The charge, which is in addition to the regular demurrage rates, is declared to be an unjust discrimination against lumber and forest products taking lumber rates. The fact that hay, grain, cotton, fruits, vegetables, coal, pig lead, spelter etc., "are reconsigned in transit and that the service rendered in connection with the holding of such shipments for reconsignment is identical with the service rendered in connection with the holding of lumber for reconsignment," is stressed.

This discrimination results "in the assessment and collection of greater compensation from reconsignors of lumber and other forest products moving at lumber rates than from reconsignors of other commodities for a like and contemporaneous service under substantially similar circumstances and conditions, in violation of Section 2 of the Act to Regulate Commerce;" and in "the giving to all other commodities and the reconsignors and reconsignees thereof an undue and unreasonable preference and advantage and subjecting lumber and other forest products moving at lumber rates and the reconsignors and consignees thereof to undue and unreasonable prejudice and disadvantage, in violation of Section 3 of the Act to Regulate Commerce."

Expansion of Great Woodworking Industry

How Progressive Ottawa Organization has Come to the Front Through Many Vicissitudes—Varied Activities in Welfare and Comfort of Employees

From a little "two-by-four" factory, making 10 doors per day by hand, to the largest and most up-to-date of its kind in Canada, with a capacity of a door per minute; with an export trade embracing Great Britain, South Africa, and other parts of the world; with large timber limits and sawmills of its own; owning and controlling a village; owning and conducting a school; with a varied business enterprise embracing the manufacture of refrigerators, portable houses and garages, boxes and box-shooks and window shutters, and being the owner of some 60 houses, two apartment houses and a factory, which it leases—

Such, in brief, has been the history of the firm of James Davidson's Sons, Ottawa, which has done a little more than its bit in placing Ottawa on the map.

Started in a humble way back in 1874 by the late Robert Thackray, who was the stepfather of the late James Davidson, this well known Ottawa firm has had a history of steady advance and enterprise.

An interesting feature of the history of this firm is that, though it has had steady enlargements calling for increased demands for capital, and though it has passed through four phases of family ownership, it has always been, and is today, a privately owned business. It has never been a joint stock company, and not a person outside of the members of the family have had a dollar in the concern. In 1918, when Mr. Keith Davidson became of age and the estate of the late James Davidson turned the business over to the two sons, Grant and Keith, the brothers elected to continue the business as it had been.

Another interesting feature is that the business under the ownership of the sons is not only continuing its prosperity, but has been steadily increasing it.

Quick Recovery Was Made

A third interesting feature about the Davidson story is that the firm in its time has had three disastrous fires, which almost put it out of business; twice the Ottawa mill was burned, and once the mill up the Coulonge was destroyed. But such has been the spirit that made the business what it is, that after each fire the firm went ahead in a bigger way than before. After each fire the mill became larger and more modern and the output greater.

It was back in 1874 that Robert Thackray opened a little sawmill and sash and door factory. That mill, old-timers will remember, was located at the upper end of Bell Street, south of the Grand Trunk tracks. It was there the late James Davidson, father of Grant and Keith, the present owners of the business, got his early hard knocks and learned the business in a practical way. It wasn't much of a business—a few men, a couple of saws and some belting, etc.; but it had the germs of success.

And so it came about that five years later, in 1879, Mr. Thackray moved down to the centre of the city, where the growing business could be seen. He got right into the middle of things by getting a site on Sparks Street, between Bank and Kent, just west of the Dominion Theatre, which building, by the way, James Davidson later built and owned for a number of years, together with the Cecil Hotel.

Whether Mr. Thackray came to Sparks street because he had a prophetic eye as to property values, the fact is that the land which Mr. Thackray bought in 1879 for a few hundreds of dollars was sold by the estate in 1913 for $125,000.

Anyway, on this site Mr. Thackray erected a fine brick mill. At that time the mill property ran from Parker's Dye Works, on the west, almost to Bank street, and extended through from Sparks street to Queen street, and included the side of the present Journal building.

The new mill was a comparatively small affair, the property being mostly yards. A few years later it was destroyed by fire. The larger and better mill quickly took its place.

In 1893 Mr. Thackray retired and the business was taken over by Mr. Wm. Thackray and Mr. James Davidson, the half brothers, under the firm name of Davidson and Thackray. Under this new firm the business went on progressing until 1903 when one night the whole of the fine mill went up in flames.

The First Big Effort Made

The following year Davidson and Thackray rebuilt in a still larger way on the present site on Wellington street, at the corner of Rochester, purchasing land which extended from Wellington street, along Rochester, and a good part of the way over Preston street. This site, it might be interesting to note in these dry times, was originally the site of the old Rochester Brewery, which older Ottawa people will remember was one of the big Ottawa enterprises of the early seventies. The owner, the late John Rochester, was a former mayor and well known philanthropist. It is also worthy of note in this connection that the new owner of the site subsequently became a controller and a very prominent figure in Ottawa public life.

In 1905 the Davidson business entered a new phase. Mr. William Thackray retired and Mr. James Davidson took the business onto his own shoulders under the name of James Davidson. From 1905 to 1911 the business continued in this way growing rapidly and branching out into new enterprises till Mr. Davidson's untimely death in 1911.

Then, from 1911 to 1918, the estate managed the business, as Keith, the youngest son, was only 14 years of age at the time of his father's death.

Into Present Hands

One bright morning in 1918 the trustees officially handed the whole business over to the two boys, and since then they have been conducting it with marked success. But Mr. Grant Davidson, the senior partner, had had plenty of solid practical training, having

Grant P. Davidson, Ottawa

Manufacturing Plant of James Davidson's Sons, Ottawa, Ont.

Keith Davidson, Ottawa

been for years before both in the office and the factory and had made himself practically acquainted with the operations on the limits.

And it is no small business which has fallen to the sons. As an indication of the extent of the business, it may be said that in the sash and door branch the complete output of the factory has been for several years contracted for a full year ahead.

The present factory is one of the most complete of its kind to be found everywhere. It is equipped with the most up-to-date labor-saving machinery, and is so laid out that the office commands a view of the whole factory, which runs at angles parallel with Wellington and Rochester streets. One wing of the factory manufacturers the sashes and doors, boxes and shooks, etc., while the other looks after the making of refrigerators, portable houses and other lines which the company handles, including movable houses.

Movable Houses to the Front

The refrigerator "The North Star," which the firm makes, is, by the way the idea of an Ottawa man, a Mr. Ouelette, and it is made under his patent. These refrigerators, like the doors, go far and wide from Ottawa and help to keep the capital's spot on the map freshly inked. The portable house branch of the business has also developed greatly. The firm makes houses from the size of little one-room shacks, suitable for fishing expeditions, up to 5 and 6 room buildings of the summer cottage variety, complete with partitions, stovepipe holes, verandahs and all the other paraphernalia, and which can be fastened securely together at a few hours' notice. These movable houses are made in bungalow and other designs. A real nice portable bungalow can be bought as low as a thousand dollars, while fishing shacks and garages can be had for very modest sums. The movable house idea has taken wonderfully. The firm ships these houses as far as British Columbia.

The first important extension of the Davidson enterprises came in the year 1876. Previous to this year the firm had bought all the lumber it manufactured. In 1876 Mr. Thackray decided to be self-sustaining. He purchased a small pine limit on the Quyon River, 16 miles back of Quyon. This limit held about 30 square miles of pine. It was operated till about 1900, when it got played out and was put in the discard.

Then, in 1909, Davidson and Thackray further branched out by purchasing three adjoining limits back of the village of Coulonge. Included in this purchase was part of the old Hurdman limit which included a lot of fine hardwood, which the firm needed in its refrigerator and other developing business. The purchase also gave them over 107 square miles of fine white pine and spruce.

The purchase included one of the Booth limits and a nice limit bought from the Promleys of Pembroke. The Bromley limit was the first purchased, in 1898; the Hurdman, in 1899, was the second, and the Booth, in 1900, the last.

Shortly after this the firm built a sawmill at the mouth of the Coulonge River, at its junction with the Ottawa. At this point was born the village of Davidson, which today is firmly established as part of the Ottawa Valley topography.

Five years later fire again hit the Davidson enterprise, wiping out the Coulonge mill. But the very next morning Mr. James Davidson was on his way to Coulonge to lay plans for a new mill, which, like the second Sparks street mill, was to be bigger and better than its predecessor. And so it became. The mill at Davidson today has a capacity of 100,000 feet per day. Seventy-five per cent. of the lumber sawn is white pine. The mill now employs an average of 180 men, and the village is a thriving little place, with stores and all the equipment of a live village, including a post office, church, hotel, etc.

School For Firm's Operatives

But one of the most interesting features of the village, which, like the town of Pullman, and the creations of other large business concerns, is Davidson owned, is the school which the firm operates. It owns the building and pays the teacher and educates the children free. On Sundays the school building is used for church purposes.

"We do this," said Mr. Grant Davidson, "not entirely from philanthropy, but because it is also good business. Having educational facilities, keeps the parents contented and permits to employ married men with families who, generally speaking, are the best employees." In his office here, Mr. Davidson has a fine set of photographs of the school and children which he took himself, being an enthusiastic amatetur photographer. He has also, by the way, a complete set of views of the various operations of the firm throughout the limits, all personally snapped.

In the limits the Davidson firm keeps two camps going, each camp employing about 100 men. This year the firm expects to take out about ten million feet of white pine, spruce, etc.

During the war the Davidson factory did its bit, working night and day. In the five years Canada was at war the Davidson mill turned out the enormous number of three million shell boxes. In order to handle this work the firm purchased a large quantity of special machinery.

It should be mentioned also as no small feature of the Davidson history that the firm is a large house owning concern. Since about 1900 the firm has built and now leases over 60 good class houses and two large apartment houses. Mr. Davidson's genius for business shows itself in this effort. The building of the houses kept the mill busy and at the same time helped a local brick company in which he had an interest. As the city grew these properties enhanced greatly in value till today the buildings and land are worth over double their original cost.

A story of this enterprise which has helped so materially to keep the name of Ottawa before the world would not be complete without some personal reference to the later activities made the business, and to his sons, who, under the title James Davidson's Sons, are so capably extending the work their father began.

The late Controller Davidson was in his time one of the strong men of the city. He was in civic life for many years and was always identified with every movement calculated to advance the city. His

James Davidson's Sons Mill at Davidson, Quebec

methods were direct. For years he was chairman of the Civic Board of Works. In civic work he never let technicalities stand in the way.

Mr. Grant Davidson is the senior partner in the firm; is a bright, shrewd young man of keen business ability. That his abilities are recognized is shown by the fact that he is president of the Ottawa Lumber Credit Bureau, a director of the Ontario Retail Lumber Dealers' Association, a director of the Mortimer Company, of Ottawa, a director of the Canadian Theatres, Limited, which control the Dominion Theatre, Ottawa, and a chain of other Canadian theatres. Mr. Dvidson is also one of the live wires of the Kiwanis Club and a great "booster" for the city. He is a keen follower of athletics. He is vice-president of the reorganized Pastime Baseball Club. He has not as yet developed any political ambitions, though he has been repeatedly urged to become an aldermanic candidate for Dalhousie Ward. He is personally popular.

Did His "Bit" in the War

Mr. Keith, his younger brother, is also showing marked business ability. During the war he did his bit, having gone overseas with the Royal Air Force and having served in France. It is a matter of interest that Mr. Davidson received his flying training from the late Vernon Castle, the well known dancer who achieved a reputation as a flying man which was almost as great as his reputation as a dancer.

Before enlisting Mr. Davidson secured a military training at the Royal Military College, Kingston. Like his late father he is fond of clean sport. He is a well known member of the Cliffside Ski Club. Mr. Davidson played football with the R. M. C. team while at Kingston, and while at Ashbury College played on both the hockey and football teams. He plays a good game of tennis and is a member of the Rideau Tennis Club.

Mr. Keith Davidson is very well known to the Ottawa public. In his very young days, he was much before the Ottawa public as an elocutionist and was in great demand.

In closing another Davidson should be mentioned. This is Mr. Robert Davidson, who is a brother of the late Controller Davidson. Mr. Robert Davidson has charge of the firm's operations at Davidson village and limits. Mr. Davidson was formerly an alderman here, having represented Dalhousie Ward for a number of years.

The village of Davidson and the Coulonge limits are both on the line of the Canadian Pacific Railway.

Developing Vast Resources of the Pacific Coast

How Representative Timberman Has Presented its Unrivalled Possessions in Manner That Has Resulted in Bringing Capital for Industries

C. S. Battle, Vancouver, B. C.

C. S. Battle, head of the C. S. Battle Timber Co., Vancouver, B. C., is one of the aggressive lumbermen on the Pacific Coast, who has had an interesting career which stands out uniquely in some respects.

He has resided about eighteen years in the West and says that he has a much better opinion today of Vancouver, British Columbia and Canada than he ever had.

Mr. Battle's people were originally French, who went to England for refuge and lived in the Old Country for two and a half centuries. The name formerly Batille was anglicized to Battle. Later on his branch of the family moved to America, settling in the Virginias and Carolinas. Mr. Battle's father was a native of North Carolina and his people were mostly English. The mother was a native of Alabama and her people were Scotch-Irish. Mr. Battle is a product of Louisiana and was born in a turbulent time when the war was raging between the North and the South. His father, Colonel Battle, who was one of the largest planters and manufacturers in the South, was completely ruined by the war; his home, factories and other properties were burned and the country was devastated by the Yankees, or, as some would term it, Northern troops. Under carpet-bag and negro rule, the family property was practically confiscated and Mr. Battle, Sr., then a man in his fifties, was compelled to flee for his life to the then unknown country of Texas and labor for an existence and support his family under very trying conditions.

The subject of this sketch was compelled to go to work at twelve years of age owing to his father's long illness and death. At nineteen years he went into business for himself. This business grew until later on he moved from McKinney, Texas, to Sherman, Texas, buying an interest in a large wholesale concern. He was successful, but the territory was limited and he sold out and organized a company in Fort Worth, Texas, a large railroad centre, and ran a successful business for a number of years when his health failed and he had to move to the Pacific Coast. He lived in Los Angeles for a short period and visited every town from San Diego to Vancouver, and was not satisfied until he saw Vancouver.

Mr. Battle started in the timber business, buying and selling, and then organized the Vancouver Lumber Co. and conducted it successfully for a year. He then sold it to some southern friends in Texas.

They ran the old mill for a few years and then built a much larger one, and Mr. Battle purchased for them over one billion feet of standing timber, which, needless to say, has made them a snug amount of money. In selling his mill he retained the timber and has been buying, selling and handling timber on a commission basis ever since. He bought a small mill in Howe Sound but sold it after having run same for something over a year. Mr. Battle has been interested in logging camps, not to the extent of personally operating, but for the two-fold purpose of helping the other fellow and gaining information regarding the cost of logging, etc.

He has been working on a constructive policy ever since he reached Canada, and among the first large transactions in timber he sold the Shevlin-Clark Company, of Minneapolis, about 60,000 acres of standing timber which they sold later on at a handsome profit. Through the Shevlin-Clark people the Brooks-Scanlon Co. came to B. C. to look around also, and that was the basis of the big Powell River Pulp & Paper Co. Mr. Battle has secured millions of capital for sawmills and shingle mills and for logging purposes. He sold the White Bros. Lumber Company a number of years ago a tract of three billion feet of timber located on Vancouver Island and later on bought for them an additional two billion feet, making five billion feet in all, which tract is considered the best large one on the Pacific Coast, averaging over 60,000 feet per acre on 82,000 acres. In this company are associated such men as Cyrus McCormack of the International Harvester Company; Alexander Legge, president International Harvester Company; H. B. Utley, vice-president and purchasing agent International Harvester Co.; Mr. Lufkin, principal owner Kimball Piano Co.; W. O. King of W. O. King Hardwood Co.; Mr. Letts, of the American Western Wholeesale Grocery Co., all of Chicago, and the White Brothers of Boyne City, Michigan.

About two years ago they organized a subsidiary company known as the Beaver Cove Lumber & Pulp Company and have already spent about two million dollars laying the foundations, building a sawmill, shingle mill, and the first forty ton unit of a pulp mill. Mr. Battle is a shareholder and one of the directors in the Beaver Cove Lumber & Pulp Company.

Mr. Battle owned and carried during the war period about 2-000,000 feet of standing timber. He refrained from engaging in business locally for the reason that he wanted to conserve his time and energy for the purpose of bringing in capital to develop the vast natural resources of British Columbia. His heart is in this work and he is in the hope of being even more successful in the future than in the past.

Mr. Battle's hobbies are golf and motoring. He recently took part in one of the largest and best golf tournaments ever held in the North American continent, from the standpoint of numbers, talent and management. This tribute was paid to the tournament by the entire Pacific Coast press. Mr. Battle has also been elected president for next year of the Pacific North West Golf Association, which includes all the golf clubs in a part of California and all Oregon, Washington, Idaho, Montana andBritish Columbia. A prominent member of the Masonic Order, and a Mystic Shriner, he also belongs to the Vancouver Club, the Tennis Club and other organizations as well as the Vancouver Golf and Country Club and the Shaughnessy Heights Golf Club. Mr. Battle was born on September 1st, 1863. He does a little fishing occasionally—that is, when he can spare the time from his active business and the pursuit of golf.

New Fire Alarm Publications

The Northern Electric Company has just issued two new fire alarm bulletins. One of these describes fire alarm systems for municipalities; the other fire alarm systems for industrial plants, schools, hospitals, hotels and public buildings. The intricate and important problems connected with fire protection are treated in detail with descriptions and illustrations of the various systems and equipment used. The books also contain some very vital statistics on fire losses and an outline of the history of fire alarm development. They are excellently printed on first-class stock and cover designs are in appropriate scarlet; appearance and contents combining to make a most impressive exposition of an impressive subject. Sample copies of both publications were distributed to the Fire Chiefs at the International Fire Chiefs' Convention recently held at Toronto, and met with very favorable comment.

Paper Company Buys Canadian Limit

The Matane Lumber and Development Company, owned by O'Brien and Doheny, has sold all its assets, real and personal, to the Hammermill Paper Company of Erie, Pennsylvania.

The deal, which involves a price of several millions of dollars, was completed last week in Montreal.

The timber lands acquired with the mill site, river improvements, etc., lie on the rivers Matane and Cap Chat, on the south shore of the St. Lawrence, comprising an area of 133,000 acres.

Dollar Interests Have Three Mills

The Canadian Robert Dollar Company's lumber mills on the Pacific Coast are now cutting 450,000 feet of lumber daily. They have three plants, one at Bandon, Oregon; one at Dollarton, Vancouver, and one at Portland, Oregon. The latter has been recently purchased. The deal was put through six months ago and the Dollar interest placed the mill in operation six weeks ago. The property was purchased from L. W. David of Portland, and was known as the Monarch Lumber Mills. It is understood the price was in excess of a million dollars.

Personal Paragraphs of Interest

A. N. Dudley, of Toronto, is on a hunting trip to Sheppard Siding, Algoma.

A. W. Barnhill has joined the selling force of the E. C. Plant Lumber Co., wholesale dealers, Montreal.

Frank H. Stearns, of F. H. Stearns & Co., Montreal, has been on a short business visit to Halifax and St. John.

A. E. Clarke, of Edward Clark & Sons, Toronto, has returned from an extended business trip to Boston, Vermont and the New England States.

Wm. H. Crowe, manager of the Federal Lumber Co., Vancouver, B.C., was in Toronto recently on his way to Scotland, where he will spend a few weeks.

W. L. Bird, who has been manager of the Kaministiquia Power Co. since its establishment in Fort William, has been appointed manager of the Fort William Paper Co.

J. M. Donovan, Toronto, has returned from a successful fishing trip up north. The party had remarkable good luck, capturing a large number of pickerel and three 'lunge.

Mr. Kelly of Kelly & Dunlay, retail lumber dealers, Campbellford, Ont., has bought out the interests of his partner, who has retired. The business will be continued by Mr. Kelly.

John MacFarlane, for many years identified with the paper industry in Canada, and for a long period president of the Canada Paper Co., passed away recently at his home in Westmount, Que.

W. Mason, of the Mason-Kimball Lumber Co., Montreal, wholesale lumber dealers, has returned from a trip to the Pacific Coast where he made some business connections, on behalf of the firm for handling B. C. forest products.

James H. Lane, of Montague L. Meyer, Limited, London, England, is on a business visit to Canada. He will go as far as Vancouver. Mr. Meyer was formerly timber buyer for the British Government, and has business interests in this country.

A. R. Thompson, late of Belleville, Ont., who for many years has held the position of chief tie and timber inspector for the Grand Trunk Railway, has removed with his wife and family to Toronto and taken up his residence at 349 Rusholme Road.

W. L. Creighton, Canadian National Railways advertising agent, Toronto, has received a new and responsible position in the railway service. He will go to London, England, as European advertising agent of the Canadian National Railway and Steamship Lines, and will sail in the near future.

Wm. F. Miller, on the staff of the inspectors of the National Hardwood Lumber Association, was recently transferred from Grand Rapids, Mich., to Toronto, Ont., to assist John E. Banks, chief inspector for the Toronto district. Frank Fravelle, assistant to Mr. Banks for some time, recently resigned.

The death occurred recently in Quebec of Mrs. Kernan, wife of Robert P. Kernan, general woods manager of the Donnacona Pulp & Paper Co. Mrs. Kernan was married four years ago at the summer residence of Judge Beardsley, Mrs. Kernan's father, at Long Island, N.Y., and was prominent in social and charitable circles in Quebec city.

W. R. Youmans, of Toronto, who represents Hunt, Washington & Smith, Nashville, Tenn., reports that his company recently launched a new sawmill at Blakley, Ga., with a cutting capacity of 75,000 feet a day. The principal product cut will be short and long leaf southern pine. The new mill has the latest dressing equipment, drying kilns and other installations.

Peter B. Burton, Toronto, recently passed away at Dundas, Ont. For many years he was a traveller with John Bertram & Sons of Dundas, and later acted as a representative for the A. R. Williams Machinery Co. of Toronto. For the past few years he was manager of the Galt warehouse of the Canada Machinery Corporation. He leaves a widow, one son and one daughter.

Herbert Gagne passed away recently at his home in New Mills, N.B., at the age of 67 years. He had been in failing health for some time. He was a well-known lumberman, having been employed for a long period with McNair Bros., and with the Prescott Lumber Co. at New Mills. Mr. Gagne, who was particularly well known as a walking boss and dam builder, is survived by a wife and seven children.

Robert Bury, president of Robert Bury & Co., Liverpool, England, and Mrs. Bury, are spending a few weeks in Canada. Mr. Bury is visiting a number of the important lumber centres of Ontario and New York State, looking into sources of supply for the coming year. He recently returned to Toronto from spending several days across the border, accompanied by F. M. Thompson, manager of Robert Bury & Co. (Canada). Mr. Bury's many friends are pleased to meet him, as it is four or five years since his last visit to the Dominion.

C. G. Anderson of the C. G. Anderson Lumber Co., Toronto, accompanied by his wife and son, returned recently from a two months' trip throughout the prairie provinces, British Columbia, Washington and Yellowstone Park. This was the first extended holiday that Mr. Anderson has taken in a number of years and was purely a pleasure jaunt in which many points of interest were visited and several side trips taken en route. Mr. Anderson speaks in the highest terms of the beauty of the country and particularly the city of Victoria from a residential standpoint. He is looking remarkably well after his highly-enjoyable vacation.

T. N. Phillips of Timms, Phillips & Co., Vancouver, is spending a few months in Toronto looking after the local offices of the firm at 18 Toronto Street. He reports that lumber business in the west is quiet and believes that trade will revive as soon as the harvest is gathered in and conditions readjusted after the recent raise in freight rates. Mr. Phillips is directing at present the firm's business in the east which was until lately supervised by C. J. Brooks, who has gone with Rose, McLaurin, Limited, Toronto, as their Ontario representative. "Tom" Phillips is a former champion hockey player and took part several years ago in many a hard-fought contest in the old Mutual Street rink, Toronto.

Speaking of the arrival of Tom Phillips in Toronto, a Hamilton paper says that he was probably the greatest hockey player the game has ever produced and that his business is likely to keep him down this way the entire winter. His wife was a former Hamilton girl and, while Mr. Phillips says he does not wish to mix up in the hockey game at all again, Hamilton advices are to the effect that it would not be surprising if some of the provincial or amateur clubs made an effort to get him to act as their coach for the season.

W. A. Ransom, president of the Gayoso Lumber Co., Memphis, Tenn., whose family have been spending the summer at Port Colborne, Ont., spent a few days in Toronto recently with W. R. Youmans, 933 Queen Street West, Canadian representative of the firm. The Gayoso Lumber Co. are large producers of quarter sawn red gum, plain and quartered oak, poplar, chestnut, etc. Mr. Ransom reports that in the south stocks among the consumers are generally low but that more inquiries have been coming in lately than for some months past, and many are looking for a stiffening in prices by the 1st of November. The Gayoso Lumber Co. also does a large business in various parts of eastern Canada through Mr. Youmans, who has been calling upon the trade for the past eight years.

W. W. Carter, president of the Fesserton Timber Co., Toronto, and Mrs. Carter, returned home lately from a ten weeks' visit throughout western Canada. The trip was taken by easy stages and visits paid to a number of leading towns and cities on the prairies. The Fesserton Timber Co. has opened up a western office at 810 Dominion Block, Vancouver, which is in charge of George W. Abraham. Mr. Carter visited a number of the coast and mountain mills and said the general opinion is that lumber values are bound to ascend owing to the higher freight rates. Stocks with the majority of B. C. concerns are not large, and, while trade is quiet at the present time, an improvement is looked for in the near future. Mr. Carter met a large number of former residents of Ontario, who are now located in the west, and they are all doing remarkably well. He also took in Seattle, Portland and other cities, and was highly delighted with his outing.

New Position for Mr. Allan

Duncan M. Allan, who has been appointed Ontario representative for the Canadian Puget Sound Lumber & Timber Co., whose mills are at Victoria, B. C., and offices at Stratford, Ont., has already made a large number of friends in the retail lumber ranks in the province. His first association with the industry in a business way started in 1919 when he worked for the Connor Lumber & Land Co., of Laona, Wis., in various capacities in the woods and mills. In December last he was offered the position of shipping clerk for the Canadian Puget Sound Lumber & Timber Co. in Victoria, and remained with them until tthe end of July. He found employment in various capacities in the sheds, yard and office, all with the ultimate object of representing the company in Ontario.

Mr. Allan is an old Stratford boy and is returning to his home town. He is the only representative of the company east of Winnipeg but so far has restricted operations to western Ontario.

We understand that there are some hundred thousand standards of Canadian timber bought by the British Government still overlying in Canada awaiting shopment. This wood is deteriorating in condition, and it is a matter of great surprise that the Government have not taken steps to bring the timber over during the present shipping season.—Timber Trades Journal, London, Eng.

Conserving Natural Possessions of Canada

What Commission of Conservation Has Done in Eliminating Crude and Wasteful Methods—Careful and Scientific Utilization of Our Resources

Canada's natural resources have been referred to so often and so emphatically as "vast inexhaustible" that the phrase has come to be accepted as a literal description of the country's wealth in land and water, says J. F. MacKay, of Toronto.

The very prodigality of Canada's possessions, however, has led to such wanton waste, notably in forest and fisheries, that these sources of a once boundless wealth are now seriously threatened with exhaustion.

This is a truth hard to accept in view of the glowing statistics and golden prophecies on which the present generation has been reared. The public in its mental attitude towards national wealth is not unlike the lady who received notice that her bank deposit was exhausted.

"That cannot be," she exclaimed, presenting her cheque-book; "see, I have lots of checks left yet!"

Twelve years ago when the Commission of Conservation was established as a permanent government department it was received with opposition in some quarters and with indifference in most. The Commission was to serve as a public intelligence bureau with respect to the natural resources of Canada. Although it has no administrative functions, it stands for careful and scientific utilization of those resources.

Broadly speaking, the Commission was to investigate the manner in which Canada's great possessions were exploited; to ascertain if wasteful methods are being employed; to enquire into natural causes of loss, such as forest fires; to discover by what means undeveloped resources, such as coal and other minerals, could be turned to good national account. By the natural sequence of ideas, to that function was very soon added the duty of conserving the nation's greatest asset, its man power.

It was not long before the investigations of the Commission revealed that in many directions Canada was living on its vast but by no means inexhaustible capital, and with all the native faith of the lady in her bank. unsigned checks. It was demonstrated that crude and wasteful methods were in vogue; that many of those engaged in exploiting the abundant resources of the country were totally lacking in the scientific education that was necessary in order to make the best use of that which was placed in their hands. More or less capable amateurs were doing work that should have been in the charge of trained scientific men. Forthwith the Commission started its propaganda to teach the elementary truth that technical problems should be in the hands of technically trained experts.

A Non-partisan Commission.

Through its committees the Commission of Conservation, of which Sir Clifford Sifton is chairman, has a personnel that is representative of the entire Dominion. Its committees on fisheries, game, fur-bearing animals, forests, lands, minerals, waters and water powers, and public health, cover every conceivable phase of the public interest and welfare. The Commission is strictly non-partisan, and party politics are unknown at its annual conventions.

In view of the fact that not so very long ago for every tree cut down in Canada, three were destroyed by fire, the work of the Commission in lessening the menace of forest fires alone would justify its appointment. In this respect the Commission has achieved a work which it is almost impossible to believe has been accomplished in little more than six years.

The need for scientific education has been insisted upon in season and out. Particularly of the fishing industry has this been true. The unpleasant fact that Canadian herrings were worth considerably less than half the value of the Scotch variety led to an enquiry that revealed the Canadian fisherman as inexpert. The remedy was obvious and has been applied with gratifying success. The threatened extinction of the salmon of the Fraser River district has engaged the attention of the Commission, and suggestions have been made which, if the government at Washington concurs, will establish the salmon industry in perpetuity. Some of the Western lakes which were considered depleted a few years ago have been restocked from government hatcheries with a greater supply than ever. These hatcheries were established at the urgent instigation of the Commission.

Similarly steps have been taken to preserve the game and fur-bearing animals from extinction. Ruthless destruction of the big-horn sheep, deer, moose, elk and caribou of the Rockies and elsewhere has been stopped, and where there are no settlers with prior claims to the land, reserves for these creatures of the wild have been established.

The coal situation has been thoroughly examined and when the Commission recommendations for utilizing the vast deposits of coal in the Dominion are acted upon on an adequate scale, Canada will take a foremost place among the coal-producing nations of the world and her dependence upon the United States for fuel will be a thing of the past.

Our Wealth in "White Coal."

The exploitation of Canada's "white coal," or water power, has also engaged the close attention of the Commission. Our illimitable wealth in this direction is but feebly realized by the average citizen, but it is safe to say that once this great reserve of energy is utilized the motive power and heating problems will be solved for all time. Meantime the Commission of Conservation, by constantly referring to the subject in pamphlets and reports of the most thoroughly practical nature, is rendering a very great and valuable service.

No part of the commission's undertaking has surpassed in value its work in the direction of rural planning and development.

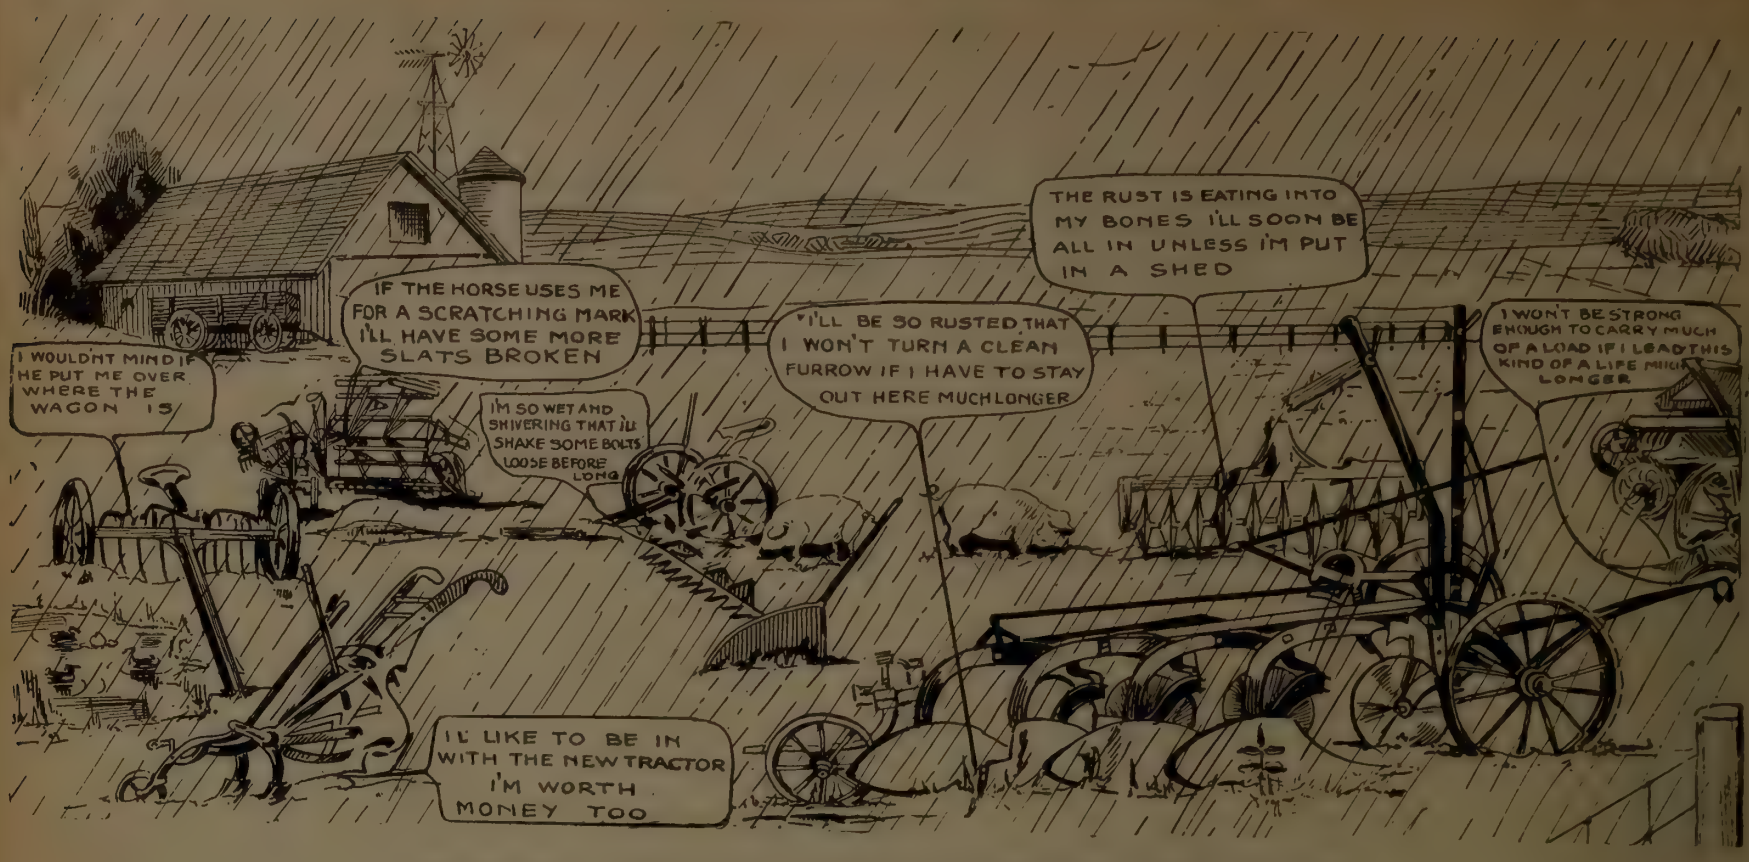
Although a comparatively young and undeveloped country, Canada has its slums and its drab, dreary country districts. To remove this reproach is the task of the Commission's Town Planning Department. Environment, public health and welfare go hand-in-hand. Long ago Goldsmith spoke of a land where "wealth accumulates and man decays." No waste is so deplorable as waste of human life, and no other loss is so hard to make good. A wealthy land may be effete but no country with a virile manhood can be poor. How its ciltizens live, and where they live, is as vital to a country as where its natural resources are located and how they can be utilized. There are such things as preventable death and preventable disease.

The work of the Commission of Conservation in town planning and land development has been warmly supported in every province, and its advice and help have been uniformly welcomed and to a large extent utilized. This is all the more gratifying because the commission has no executive power and acts in an advisory capacity only. Because it stands consistently for careful and scientific utilization of all natural resources it is accomplishing very great and satisfactory reforms.

I cannot conclude without a word of tribute to the staff of experts who, at very moderate salaries, have been responsible for the success of the various departments. It is a pleasure also to refer to the devotion of several fellow-members of the original commission with whom I have been associated throughout. Senator W. C. Edwards, Dr. J. W. Robertson, Dr. Howard Murray, Mr. W. B. Snowball, New Brunswick; and others have shown a widely informed interest that has never flagged. If the work of the commission is subject to any criticism it is that it has been done too quickly, and in giving this birdseye view of its activities it is fitting that mention be made of those who during twelve busy years have given ungrudgingly of their time and talents in this signal piece of service.

When the Forests Give Out, What?

"One of the most interesting things to come to my knowledge is the seeming lack of interest on the part of the people of the United States to save our forests," said Charles Lathrop Pack, president of the American Forestry Association. "Our new growth of timber is not more than one-third of the amount being used or destroyed every year. There is an end to all things," continued Mr. Pack, "and the timbermen, lumbermen and wood-using industries must get together with the foresters on a national forest policy of some kind. We all know about locking the stable door after the horse is stolen, and we can all stand around and wonder what to do when the well runs dry, but what are we going to do when the forests give out? Place your finger on something into which the use of wood in the making does not enter. Rather hard for you to do it, I will say. The newspaper owner knows about the mounting cost of print paper and the cost of the barrel in which you find your flour has gone away up. You cannot eat the paper or the barrel, but they figure big in the high cost of living you hear so much about. We must have a natural forest policy in this country, and that soon."



I WOULDNT MIND IF HE PUT ME OVER WHERE THE WAGON IS
IF THE HORSE USES ME FOR A SCRATCHING MARK I'LL HAVE SOME MORE SLATS BROKEN
I'M SO WET AND SHIVERING THAT I'LL SHAKE SOME BOLTS LOOSE BEFORE LONG
I'LL BE SO RUSTED THAT I WON'T TURN A CLEAN FURROW IF I HAVE TO STAY OUT HERE MUCH LONGER
THE RUST IS EATING INTO MY BONES I'LL SOON BE ALL IN UNLESS I'M PUT IN A SHED
I WON'T BE STRONG ENOUGH TO CARRY MUCH OF A LOAD IF I LEAD THIS KIND OF A LIFE MUCH LONGER
I'L LIKE TO BE IN WITH THE NEW TRACTOR I'M WORTH MONEY TOO

If Iron, Steel and Wood Could Talk During the Cold, Rainy and Stormy Seasons

Proper Protection of Farm Machinery

The fall rains will soon be here and it is time that the farmer had all his equipment under shelter. The barnyard, the open field, or even the shade of a tree are not places for storing the binder, the mower, the cultivator, the disc harrow or the sulky plough. The total expenditure of this equipment represents much money and the damage done by the elements during the fall and winter season is incalculable. Rust and decay get in their work, nuts become loosened, gears get out of play, and the whole wood and steel frame of each machine probably suffers more damage through being left out in several weeks of rain and snow, hail and sleet than it would sustain through the operation of two or three years.

The ordinary farmer will take mighty good care to see that his automobile is properly housed, that his tractor is under cover, that his stock is well stabled; but when it comes to expending a few hundred dollars for the erection of a first-class implement or storage shed, he calls a halt. Anything will do for the farm machinery. The work it is called upon to do is of a strong, hard nature and, therefore, the equipment itself should be able to withstand any attacks made upon it by the elements.

It is well known that valuable machines soon rust when left outside, and it has been declared time and time again that implements will last twice as long if protected with a suitable shed. The accompanying cartoon shows what would possibly be said by the different pieces of machinery if steel, iron and wood could talk.

So much has been said upon the subject of farmers having suitable accommodation for their farm implements that little new information can be presented. We learn more and retain more through the sense of sight than by any other faculty, and that is the reason the cartoon arouses so much interest and keen appreciation today. The picture on this page tells very forcibly why a retail lumber dealer should get in touch with their rural customers and more especially those who have not suitable implement sheds, and urge upon these residents to spend a few dollars in such structures in the interest of economy, thrift and self-protection.

An Aerial Survey of Labrador

Some details of the aerial survey of southern Labrador, made by an expeditionary party about a year ago, were given yesterday by Major Daniel Owen, who was a member of the expedition and who was recently in Montreal. The steamer which was commissioned for the expedition was equipped with airplanes and a hydroplane, and manned by men experienced in land survey and timber lore, aerial photography and other requirements of the work in hand.

In reviewing some of the work of the party Major Owen stated that they took 15,000 photographs, and elaborated estimates, based on checks and measurements made on the earth, over 2,500 square miles of territory around the basins of the Alexis, Gilbert and St. Mary's rivers. They found that the rugged and barren coast line was but a fringe of some twenty miles in extent, and that beyond it there lay one of the most generously forested countries in Canada.

Sufficient faith had been previously given, Major Owen observed, to lead to a project, backed by European capital, and countenanced by the Royal Bank of Scotland, to suggest practical development of the timber areas within these regions. The scheme, however, was overtaken by the financial discouragement of the war and went into abandonment.

Following the evidence brought forth by the aerial survey—the first of its kind ever undertaken—a new company has been organized, known as the Southern Labrador Pulp & Paper Co., in which American capital has been enlisted, with the idea of installing a 400-ton pulp mill, with four saw mill units of 50,000 feet per day capacity, to exploit this great Labrador timber preserve, and bring its productivity into the markets of the world. Major Owen says that there is assurance in the statement that operations will be begun there next year. The scheme provides for the location of the pulp mill on the Alexis river, with power developed from the falls of the Gilbert river, which also flows through the territory. Mr. James Munroe, president of the Canadian Cordage Co., and director of the Imperial Tobacco Co. of Newfoundland, is a member of the new company, which has been promoted by W. F. O'Connor, formerly chairman of the Board of Commerce.

Major Owen, in speaking of the Labrador timber area involved in this project, said that the old superstition of barren lands had been dissipated by the aerial expedition, which he accompanied. Once beyond the rocky belt of the shore line, the area is all virgin timber, without a barren spot. It is estimated that there is sufficient forest to keep the proposed pulp mill going in perpetuity. Ninety per cent. of the timber is spruce, which, owing to natural conditions, is harder and firmer than the spruce of more southerly latitudes, and yields more pulp to the ton. He says that every conceivable test has been applied to determine the quality of the timber, as well as its quality, and that American anaylists have pronounced the Labrador spruce equal to producing the finest pulp in the world.

Another point elucidated by the aerial expedition was as to the adaptability of the soil of Labrador to agricultural pursuits, the fact being more generally promulgated that the soil and climate of these comparatively unknown regions are capable of producing vegetables in variety and of yielding a very fruitful return for labor expended in cultivation. The Alexis, St. Mary's and Gilbert rivers, Major Owen says, are navigable for steamers for thirty-five miles from the coast

Clearing Hardwood Bush Near Galt

Quite a dent has been made in Cowan's bush close to the Canadian Pacific track on the Roseville road near Galt, Ont., a couple of acres of which have been devoured by the portable saw mills. Pine, oak and maple trees are being felled, all of which are being converted into building material for houses, shops and bridges. The material so far through the mill is of excellent quality.

Strong Desire of Canada to Trade with Empire

What British Trade Commissioner Has Accomplished in Industrial and Commercial Lines—Great Assistance to Canadian Manufacturers

The following are extracts from the reports on the trade of Canada and of Ontario by F. W. Field, Toronto, British Trade Commissioner in Ontario, just issued as a British Government Blue Book.

A review of the year which has elapsed since the signing of the Armistice, suggests that economic, industrial and commercial conditions are sound, and that given more stable political and social conditions throughout the world than those obtaining at the beginning of 1920, the Dominion should achieve a degree of development far surpassing that achieved hitherto. Canada has gained a larger sense of nationhood through the war, and this feeling will become more pronounced as the time passes and conceivably find expression in the economic sphere. Her achievements in finances, in production of every kind, as well as those of her Expeditionary Forces, have engendered feelings of the kind mentioned. In common with her Allies, she is confronted with grave problems, but is dealing with them with characteristic energy and hopefulness. With her vast resources she has reason to hope that in the difficult times ahead, she will create sufficient wealth to liquidate her heavy burden of debt and to play a more prominent part in world economy.

As a market for British manufactures Ontario presents an attractive field, more especially in the lines in which United Kingdom manufacturers have excelled for so long. The development of Canadian manufacturing, of which such a large proportion is carried on in Ontario, leads one to the conclusion that the greater part of British trade in this market will in future years be confined to the principal groups of manufactures which constituted the business here of United Kingdom firms before the war.

It is still a matter for the consideration of certain United Kingdom firms as to whether their agency arrangements for Ontario, and Canada generally, should be treated as part of their United States agency arrangements. At least one British firm with branch works in the United States has now established a branch in Ontario. The tendency of United States firms with trade connections in Canada is to establish separate units in Canada, either branch works, offices, or agents, to deal with their Canadian trade.

There is room for much more advertising by the majority of United Kingdom firms doing business in Canada. The local agent among others should be consulted as to the best methods of expending the advertising appropriation.

The past year was notable for the number of United States companies making inquiries in this area with regard to the proposed establishment of branch works.

The Industrial Commission of an Ontario city, in close proximity to the United States, was in correspondence as to this matter in November, 1919, with over a hundred United States firms. In many cases a decision was made to erect such works, and construction was commenced.

The character of these enterprises varies from small assembling plants to large factories employing several thousand hands. This action has been taken for the following reasons among others:—

(a) To handle the Canadian market at close range.

(b) To grow, as a Canadian industry, with the expanding market and increasing purchasing power.

(c) To enjoy, as a Canadian industry, the benefits of any special trade arrangements made for the units of the British Empire.

(d) To handle the export orders, received by the parent company in the United States, for shipment to the United Kingdom and other points in the Empire.

In addition, several United States concerns with small works in Ontario, have been seeking sites for the establishment of larger factories.

The inquiries of United Kingdom manufacturers as to the establishment of branch works in Ontario were more numerous in 1919 than ever before. Works were established for the production of elastic hosiery and abdominal belts, felts for paper-making machines, and silk labels.

Alterations and additions were commenced on large branch works of a Welsh tinplate mill, which acquired one of the national manufacturing works at Toronto of the Imperial Munitions Board.

Representatives of many United Kingdom manufacturers visited Ontario to investigate conditions for local factories. While several branch works of United Kingdom firms may be erected in 1920, the number of such plants will probably never equal that of United States firms with branches here.

There is a strong desire in Ontario and Canada generally to trade with the United Kingdom and other parts of the British Empire whenever Canadian industries cannot supply local wants. This was given practical shape in the requests to this office of Canadian manufacturers and traders for information as to sources under the British flag of raw materials and quotations on manufactured articles. United Kingdom firms have also made inquiries here with a view to transferring their buying from foreign countries to Canada. An English firm which erected branch works in Ontario instructed their contractors to buy materials and equipment, as far as possible, in Canada, and, in any event, not outside the British Empire. The enlargement of such a policy throughout the Empire will undoubtedly prove a vital factor in building up inter-Imperial trade.

As the work of the British Trade Commissioners in Canada proceeds, it is seen that the tendency to strengthen the relations within the British Empire is becoming more pronounced. Inquiries were received from United Kingdom firms, for example, with regard to the possible purchase in Ontario, of intermediates for dye making, ground mica and sheet mica. In at least one of these cases, part of the business was diverted from a foreign country to Canada. Correspondence has been carried on with United Kingdom firms desiring that the products required by them should be made by Canadian firms, and with Canadian firms desiring that the goods purchased in the United Kingdom should be made in United Kingdom works. Canadian firms have also expressed a wish to establish branch works in the United Kingdom, while British firms are considering the establishment of branches in Ontario. Inquiries have also been received wtih regard to trade between Canada and India, Australia, New Zealand, South Africa and the British West Indies.

The British Trade Commissioner at Toronto has been of assistance to Canadian importers and manufacturers in various ways. Lists of United Kingdom manufacturers, importers and exporters have been furnished locally, introductions to the department in London handed to business men proceeding overseas, inquiries of Ontario concerns for quotations of United Kingdom firms forwarded and information as to the establishment of Canadian branch works in the United Kingdom. Ontario firms have made use of the office as a general source of information as to British trade matters. A number of letters received from His Majesty's Consular officers in various parts of the world have been transmitted to local firms making inquiries abroad. Acknowledging the receipt of such a letter, a Toronto firm wrote: "The information supplied is of considerable assistance to us and it will avoid us incurring expenses in that territory which would eventually prove unprofitable."

Milling-in-Transit Privilege Wins Out

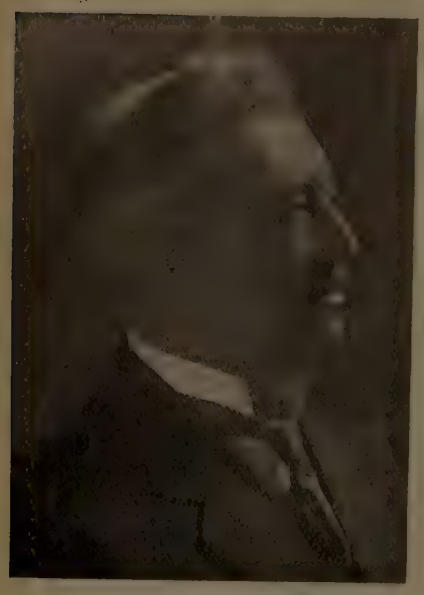
Chalk up another sweeping victory for the Southern Hardwood Traffic Association as well as for the lumber industry of Memphis and Louisville, Ky., says a recent despatch from Memphis, Tenn.

This organization is just in receipt of telegraphic information from Washington that Attorney-Examiner Barclay, of the Interstate Commerce Commission, has recommended to the latter body that Memphis and Louisville should be granted transit privileges on lumber and other forest products permitting them to be assorted, dried, dressed, manufactured and otherwise handled, and then reshipped, on the basis of the through rate, from point of origin to destination, with a small payment for the stop-over.

It is expected that more than $10,000,000 in new capital will be invested in mills, yards and woodworking plants at Memphis and Louisville as a result of this victory because it is regarded as practically certain that the commission will adopt the recommendations of Mr. Barclay, especially in view of the fact that, subsequent to the filing of the complaint, the Southern Railway and the Louisville & Nashville agreed to transit arrangements, the former at Memphis and the latter at Louisville, Ky.

J. H. Townshend, secretary-manager of the association, is elated over the news from Washington that told of victory after a hard fight dating back as far as 1909.

Resignation of an Aggressive Minister



Hon. (Dr.) E. A. Smith, Fredericton,

Hon. Dr. E. A. Smith, who for nearly three years past has been Minister of lands and Mines for the Province of New Brunswick, has resigned his portfolio. It has been rumored for several weeks that Dr. Smith was at variance with his colleagues in the matter of the location of a provincial game reserve and that he could not see eye to eye with the other members of the Cabinet with respect to the amount of stumpage dues to be collected on Crown lands.

Hon. Dr. Smith, durinng his incumbency of office, inaugurated many reforms in administration, and also put into effect a progressive forest policy. The timber relations of New Brunswick are regarded as among the best in Canada. A survey of the timber resources of the province is being conducted and many other advanced moves have been made in the line of conservation, fire protection, etc.

Dr. Smith is a native of Shediac, N. B., and was born in 1864. He graduated at Pennsylvania Dental College and has been a lumber and general merchant for some years. He was Mayor of Shediac in 1906-7 and first entered provincial public life in 1916 when he won a by-election against the Minister of Public Works. The following year he was again victorious in the general contest and in March, 1918, at the time the Foster ministry was formed, he was made Minister of Lands and Mines, which post he ably and successfully filled.

Declares that Selling is Teaching

Business is only a form of teaching. You teach workmen how to make the right product; that is manufacturing. You teach people to co-operate with you; that is organization. You teach people to desire your product; that is selling.

Many years ago, while at Biskra, Africa, I saw one Arab selling dates to another. The man who sold the dates advertised them by the five senses—hearing, seeing, feeling, smelling and tasting.

In this way he taught his customer to desire the product he was selling.

This experience with the two Arabs and the pile of dates on the desert showed me the importance of using the most effective method of teaching people.

We have to teach our employees, our agents and our customers. It is not possible for us to use all the methods used by the Arab merchant. In this business the use of the senses of taste, smell and touch is of no value in teaching.

It is very important to know the best way to teach. There is a great advantage in teaching by the eye. When you talk to a man, what you say usually goes in one ear and out the other. This is because it is hard to retain what you hear.

A man remembers what he sees. The nerve from the eye is 22 times as strong as the nerve from the ear to the brain. The eye sends its message to the brain 22 times as fast as does the ear. About 87 per cent. of our knowledge is received through our eyes.

To succeed in business it is necessary to make other men see things as you see them. This means you must see and believe them before you can tell another. I have been trying all my life to see for myself and then to get other people to see with me.

One of the many advantages of teaching through the eye is the exactness of the knowledge gained by the students. One of the first articles we purchased when the business was started was a blackboard. The men were often called together and given talks which were illustrated with diagrams and sketches.

One of the most effective plans used then was to draw a pair of scales and on one side show the cause and on the other side the effect of some action. It never failed to impress an audience. They quickly saw the point I was trying to make.

From this developed a system of cartoons or chalk talks. Paper pads were substituted for the blackboards. The drawings were homely, but they expressed the idea and made the contrast. The funny figures put the people in a good humor.

We also employed an artist to go around the shop with me and make sketches of things which were not being done right. These sketches were made into drawings. Then the men were called together and shown exactly what they were doing.

Later, a stereopticon was purchased and the drawings were projected on the screen. This made them even more effective than on paper. We also used photographs in this manner.

Mottoes were framed and hung in prominent places throughout the factory. These act as a constant reminder to our employees to try to improve.

Our people were also taught by bulletin boards, one of which was placed in every department in the factory. These bulletin boards have been used constantly since they were started many years ago. Playlets, pageants, and demonstrations have also helped to make our ideas clear to others. The use of these methods makes it easy for all to understand.

When moving pictures came, we began using them to teach people. We now have a big department, with many motion picture films, modern up-to-date machines, and more than 75,000 stereopticon slides.

We started a newspaper to teach our agents and salesmen. We want them to learn the many good things we learn here at the factory. We want them to have the necessary information and material to teach merchants about our product.

Booklets and pamphlets of many kinds have helped in this work. Wherever possible these publications are illustrated with photographs and drawings.—John H. Patterson, National Cash Register Co.

New Toronto Wholesale Lumber Firm

The R. Imrie Lumber Co. have been organized and opened offices in the Canada Permanent Building, 18 Toronto Street, Toronto. The members of the organization are Robert Imrie, Toronto, and Lieut.-Col. E. L. Thomson, D.S.O., late of the City Hall auditing department, and for several years a well-known accountant.

Mr. Imrie will have charge of the buying and selling, and Lieut.-Col. Thomson will look after the financial end. The company will specialize in spruce and jack pine and general Northern Ontario stocks. Mr. Imrie is a thoroughly practical lumberman and comes of a family long associated with the timber trade of Scotland. He has been in Canada fourteen years, hailing from the Galloway district in the south of Scotland. His first association with the industry in the Dominion was with A. McPherson & Co. at Longford Mills, for whom he was manager for several years. He next joined the firm of McPherson, Dudley & Imrie, who conducted an operation for some years at Dane on the T. & N. O. until the limit which they possessed was cut off. Since then Mr. Imrie has been associated with A. N. Dudley, wholesale lumberman, Toronto, handling all his purchasing operations.

Lieut.-Col. Thomson is a well known military man, who served overseas, his old regiment being the 9th Northumberland Fusiliers. He received his discharge only a few months ago and since then has been residing in Toronto. He is a brother-in-law of Mr. Imrie.

Conference on Lumber Camps Regulations

Dan McLachlan, of Arnprior, president of the Canadian Lumbermen's Association, and Frank Hawkins of Ottawa, secretary of that body, were in Toronto recently conferring with the Provincial Board of Health in regard to certain improvements which have been recommended by Dr. J. W. S. McCullough, Chief Officer of Health for Ontario, in respect to standard camps and improved sanitary conditions. The matter is now being taken up by the lumbermen and the Health Department with a view to coming to a satisfactory conclusion on several points and meeting as far as possible the suggestions of the health authorities.

The effort of the Provincial Board of Health is in the direction of having standardized camps as far as it is possible to do so.

Help Reported Scarce in North

J. J. McFadden of McFadden & Malloy, Spragge, Ont., was in Toronto recently on business, and reports that their mills at Blind River and Spragge are still operating and do not expect to close down until the end of October. Help is still very scarce, as far as the camps are concerned, and higher wages are being paid than ever, but men are still restless and far from being efficient.

McFadden & Malloy are operating seven camps this season, which is about the same number as last year. White pine is holding its own in value, other softwoods are somewhat weaker in price owing to competition from southern and British Columbia forest products.

The lumber cut of the Maritime Provinces has been estimated as to kind: spruce 50 per cent.; pine 20 per cent.; hemlock 20 per cent; hardwood 10 per cent.

National Retailers Favor Uniform Standards

For Sizes of Yard Lumber, Patterns of Wood Mouldings and Worked Lumber—Abuse of Transit Car Privilege Denounced—Proper Cost Accounting

At the fourth annual meeting of the National Retail Lumber Dealers' Association, which was held in St. Louis, Mo., there was a large and representative attendance and the various sessions were most profitable and interesting. The following officers were elected:

President—John E. Lloyd, Philadelphia, Pa.
First vice president—Harry G. Foote, Minneapolis, Minn.
Second vice president—W. S. Dickson, Kansas City, Mo.
Third vice president—A. H. Kemper, Toledo, Ohio.
Treasurer—John Claney, Chicago (re-elected).
Secretary—Charles E. Bowen, Detroit, Mich, (re-elected).

In the course of his address the retiring President, John J. Comerford, of Detroit, said in part:

It has been my hope—indeed my heart's desire—to see this organization so developed that the manufacturess of the nation would be glad of the opportunity to discuss their problems with us on occasions when they gathered in their meetings, and in like manner, representatives of this organization might speak to them on phases of distribution that have a common interest to the manufacturer and the merchant distributor. Can there be any question as to the propriety and value of such discussion between these two interests, to wit: Manufacturers and those who distribute 90 per cent. of the product? Can there be any doubt that such a course would develop a better understanding and a riper sympathy touching these economic handicaps that beset both branches of the industry? It is my firm conviction that some of the manufacturers who at times sell to our trade would not do so had they a better understanding of our problem. I am constrained to this belief because it is inconceivable to me that a manufacturer would consciously destroy the hand that feeds him.

Small Dealer Needs Association Most

I only wish I had the power to tell you of my conception of the power this association for good. We are launched in a great enterprise. The development of this organization is not the concern of any one man or group of men. It should be the lively concern of the entire industry. It is thought by many that this association of necessity must confine its activities to large city distribution. This is an error. True it is there are problems in the cities which differ from those of the smaller town. However, the four corners of the industry involve city, town, village and crossroads dealers, and are touched by certain common principles. Important as this organization may be in aiding the dealer with the large investment, it is in truth much more important to the man of small needs who has his very all interested in some remote community. It is the small dealer who has no opportunity to come in touch with these sources of information that can only be gathered nationally. Through the medium of an organization of this character, the small dealer can be rendered incalculable service, a service that will make him a better merchant, and thereby reflect resultant value to his whole community.

John Henry Kirby, unable to be present in person, sent a letter which was read to the meeting by Secretary Bowen. Summed up, modern business is service to the consumer at the least cost. Selfishness in business can not survive nor can propaganda started from entirely selfish motives ultimately succeed. The retailer is absolutely essential to modern business, to progress and growth. This cry for the elimination of the retailer arises from a selfish purpose not founded in the welfare of the whole country; the lumber retailer is an absolute necessity. The retail lumberman, together with the banker, form the keystone of community welfare and progress. The direct shipper, on the contrary, has no direct interest in community boosting or growth. Trade ethics, viewed from the manufacturers' standpoint, must never overlook the interests of the retailer.

Legislation Recommended to Aid Housing

Among the resolutions adopted were:

Whereas, the prevailing unrest is largely due to insufficient and improper housing accommodation, and

Whereas, all other reforms are of little avail unless the people are adequately and comfortably housed, and

Whereas, present resources are wholly inadequate to remedy existing conditions and capital finds more attractive investment in tax exempt securities, and

Whereas, federal state and municipal aid are necessary to permit the carrying out of projects to solve the housing problems: therefore be it

Resolved, that we recommend the following legislation:

(1) The elimination of State and Federal taxes on incomes derived from interest on improved real estate mortgages on residential property;

(2) The elimination of all taxation for a period of ten years on residential property erected during the years 1921 and 1922;

(3) The right of expropriation of private property, with reasonable compensation, when needed for housing extension or any civic betterment;

(4) Power to be vested in State housing commissions to create proper building codes, towns and city planning ordinances, right of expropriation, and to compel enforcement;

(5) The several States be empowered and authorized to issue bonds against mortgages on newly constructed residences owned by building and loan associations, co-operative building companies and limited dividend housing corporations, to the extent of 80 per cent. of said loans; said State bonds to be deposited with the United States treasurer to secure the issue of United States home bonds, at low interest rates;

(6) Said bonds to be lawful investments for all fiduciary and trust funds and security for public deposits: Federal Reserve banks to buy and sell under such restrictions as may be deemed advisable;

(7) That postal savings funds and all savings banks shall be required to invest a certain percentage of all deposits in said home bonds;

(8) That in order that said bonds shall be readily absorbed, all necessary circulation privileges shall attach thereto as will ensure low rates of interest to the ultimate borrower—the house owner.

(9) We believe that all municipal, State and Federal aid should be in priniciple as outlined herein, but that neither municipal, State nor Federal agencies should engage in construction of houses.

Urge Standardization of Lumber Sizes

Whereas, distributors and consumers of lumber in the United States are at a preventable commercial, economical and technical disadvantage, due to the variance in sizes of yard lumber and patterns of wood moldings and worked lumber now furnished by producers in the different regions of the country; therefore be it

Resolved, that the National Retail Lumber Dealers' Association urge upon those producers the desirability of and necessity for concerted action on their part which will result in the general adoption of uniform standards for sizes of yard lumber and patterns of wood moldings and worked lumber.

Oppose Abuse of Transit Car

Whereas, the economic evil involved in the abuse of the transit car privilege is well recognized not only by the manufacturer, wholesaler and retailer, and

Whereas, only those who seek an unfair advantage indulge in the abuse of this transportation privilege, and

Whereas, the prime need of the hour in America is more and ever more transportation facilities; therefore, be it

Resolved, that the National Retail Lumber Dealers' Association hereby goes on record as unutterably opposed to the abuse of the transit car and pledges itself to use all of its resources in demonstrating to the Interstate Commerce Commission that the present purpose of certain wholesale interests to abolish the $10 penalty is not in the interest of the public or the industry but would simply be reopening the opportunity for the abuse of transportation facilities.

The board of directors is hereby authorized and empowered to take whatever steps may be necessary adequately to present the facts to the Interstate Commerce Commission as to the wisdom and justice of the $10 penalty, and in this connection the board of directors is hereby authorized to intervene in the suit that is now pending, under the advice of legal counsel, wherein this penalty is drawn in question.

Approve Formation of Service Corporation

Whereas, the board of directors of this association has heretofore discussed several plans of organization and has approved the formation of a corporation for the purpose of selling service to the retail lumber industry; therefore be it

Resolved, that this association endorse the action of its board of

directors, and does hereby further empower and authorize the board of directors to execute and deliver such instruments of transfer and to do any and all things necessary and proper to form a service corporation; and the board of directors is further authorized and empowered to increase its own nuumber and make such changes or additions to the present articles of association as it may deem proper or advisable.

Be it resolved, that this association believes in the sanctity of contracts and their just and equitable fulfillment and acceptance without regard to market conditions.

Adopt Cost Accounting System

Whereas, accurate knowledge of the cost of doing business is absolutely essential in the intelligent operation of a retail lumber yard; therefore be it

Resolved, that the board of directors recommend to all members immediate adoption and use of a proper cost accounting system as near the plan heretofore approved by this association based on the Chicago and St. Louis plans.

Newsy Briefs from the Maritimes

With reference to the lumber situation in the Maritime Provinces a shipping agent, speaking to a correspondent of the "Canada Lumberman," said that the demand for laths and lumber in the United States is limited, and added that no improvement is looked for before spring. This will mean a small cut in the woods this winter.

The following article recently appeared in one of the leading New Brunswick papers: "Nothing should be taken for granted in connection with New Brunswick lands. If there is a reason even for suspicion that the surveys may not have been right the province should make sure that it is not a sufferer. Timber lands are too valuable an asset for there to be any doubt or uncertainty as to their ownership." In answer to this another paper comments: "While the allegations made by Mr. John Stewart, of Andover, are not taken very seriously it should be borne in mind that fifty years ago little value was placed on Crown lands by those in authority. This is shown by the fact that the Government granted to a private corporation ten thousand acres a mile as a subsidy for constructing a narrow gauge railway from Gibson to Edmundston. It was the biggest blunder ever committed by a government in the history of the province. A re-survey would probably show that the company got at least all that it was entitled to".

The case of C. H. Hayes, of Head of Millstream, King's County, N.B., against H. C. Heans and Carl Duffy, composing the Coal Creek Lumber Company of Chipman, Queen's County, N. B., before Chief Justice McKeown, in Hampton, N.B., was concluded recently. The plaintiff's claims was for $7,540, the balance alleged to be due for the price of logs sold by the plaintiff to the defendants in April, 1919. The defendants had paid $2,500 on account and tendered $2,100 in full settlement of the balance due, which amount the plaintiff refused to accept and brought action. The jury, after being out three hours, found a balance due the plaintiff of $6,608.95. On motion of the defendants' counsel His Honor deferred the entering of a verdict until the end of the session of the court.

The Board of Trade in St. John recently received notice from the Government that the British Board of Trade has withdrawn all concessions in connection with deck-loads of timber destined for the United Kingdom. This means that deck loads of lumber must be smaller during the stormy season and that the conecssions granted during the war have been cancelled.

The Pejepscot paper Company's mills at Great Salmon River, St. John County, cut during the season, now about closed, 3,000,000 feet of logs into pulp wood and 500,000 feet into lumber.

There is a report in circulation that the St. George Pulp Company may sell their property. It is said that they have received an offer from a large New York paper.

Lumber Exports from Canada Grow

While the trade in munitions, which helped to sustain Canada's prosperity during the war, has dwindled almost to the vanishing point, exports of products of the forest, lumber, woodpulp and newsprint paper have steadily increased in volume and value during the three years ended July 31st last. Exports of unmanufactured wood rose in value from $60,673,107 in the period ended July 31st, 1918, and $66,753,673 in 1919, to the enormous figure of $122,706,285 in 1920. Partly, no doubt, because of the great demand and high prices recently prevailing, the sum realized by Canadians engaged in this trade has thus increased more than 100 per cent. in three years. In the same manner exports of paper have grown. Of printing paper 12,806,152 hundredweight, valued at $36,414,147, were exported in the year ended July 31st, 1918. In the following like period newsprint exports rose to 13,143,385 hundredweight, valued at $43,053,000. In 1920 the quantity was 14,909,484 cwt. and the value $60,084,414. Other paper exported increased in value from $4,9298,552 in 1918 to $12,060,050 in 1920. Canada sold abroad woodpulp valued at $29,302,677 in 1918. She sold the same commodity abroad to the value of $57,919,248 in 1920. In the three-year period trade in woodpulp thus doubled.

Compared with the exports of woods and paper, the imports of like goods were small. They were valued at $23,541,492 in 1918 and at $37,434,773 of which $25,522,081 was for wood, in the period ended last July. It will be seen, therefore, that products of the Dominion's forests have contributed in a steadily increasing measure to the maintenance of a favorable trade balance during the past three years.

Twenty-Six Years in Lumber Line

Mr. B. C. Howard, of B. C. Howard & Co., manufacturers and dealers in pulpwood and lumber, Sherbrooke, P. Q., has been in the lumber business for 26 years,and has made a success of the job. He is first and last a lumberman.

The firm have a well equipped plant at English Lake, on the Quebec Central Railway, with a capacity of 10 million feet of spruce

B. C. Howard, Sherbrooke, Que.

per annum. They have very extensive limits, enough in fact to furnish lumber for the next forty years. These limits are in Canada and the United States, and are all freehold lands.

At the present the firm are getting their cut off other lands, reserving their own limits for future use.

May Abandon Big Lumber Mill

Merchants of Waubaushene, Ont., are authority for the statement that the Georgian Bay Lumber Co. will shut up shop and abandon its mill at the close of the present season's cut. It is the sole supporting industry of the Georgian Bay town, which now numbers about one thousand souls, but the news does not come as a surprise to the inhabitants as action toward this end had been contemplated for some time. The timber limits of the company are exhausted; in fact, part of this season's cut has been from the logs of other firms. There are no available limits to warrant further operation at Waubaushene. Already merchants and citizens are preparing to pull up stakes and indications are not wanting that the town will go to the way of many other mining centres with the trend of the industry ever northward. The Georgian Bay Lumber Co., of which W. J. Sheppard, the well known lumberman, is the head, employed upwards of four hundred hands for about five months of the year and has an exceptionally well equipped mill.

Will Carry On Pulpwood Operations

The Hawk Lake Lumber Co., Limited, with headquarters at Monteith, Ont., of which A. E. Wicks is president, has purchased the rossing mill and sawmill of the Monteith Pulp & Timber Co. at Monteith, on the Driftwood River in Northern Ontario.

The Hawk Lake Lumber Co., Limited, has obtained a charter and the name replaces the former one of the Driftwood Lumber Co., Limited. It is understood that the Hawk Lake Lumber Co. will carry on extensive pulpwood operations in and around Monteith.

A Better Understanding of Lumber Business

Aggressive Association Inaugurates Wide Advertising Campaign to Set Public Right Upon Fundamental Facts—Correcting False Impressions

*By C. M. Harrison

The dogmatism of success, which probably is as pronounced a variety as you will see anywhere, continually stands in the way of advertising achievement.

The Standard Oil Company for years was pelted with all kinds of criticism and abuse. But it believed it was a fairly decent company after all. Anyway it knew it was growing. Practically everybody was buying its oil. Why worry, therefore, over what people thought or said? Later it did care. It began to realize that lasting success could not be won alone upon nation-wide demand and financial power. Then it began advertising—to sell itself to the people as an institution.

The same experience with variation was undergone by the packers. Seldom has there been a great industry so maligned. Yet the packers grow in wealth and power. While accusing them of practically all the commercial crimes on the calendar and believing stories of human tragedies "back of the yards," people kept on buying meat and the multitude of packing house by-products. The packers have been hurt somewhat in their self-esteem by what was said about them, but inasmuch as they kept marching right ahead they felt that they could afford to leave well enough alone.

Later, this dogmatism of success on the part of the packers was broken down by the advertising sense. They concluded it was for the best interests of their business in the long run to make an advertising showing to convince the public that they were reputable business men doing a great thing for the producer and the country in general as well as for themselves and that they were not the black-hearted robbers and profiteers that they were pictured to be.

And now, wonder of wonders, comes the lumber industry also, with an institutional presentation to the public. The cool complacency of the lumber people under the attacks that have been made upon their business for the last ten or fifteen years has been one of the amazing things that business authorities have been forced to admit they could not comprehend. For the attacks on the lumber interests have not been the sporadic utterances and complaints of outraged consumers. Lumber has not been abused in the newspapers as was oil or meat. The average person knows little about lumber and cares less.

"But while there has been no popular outcry against us," said the head of a big lumber firm, "we have been fought by the vastly more dangerous enemy of skilfully organized and well-executed propaganda.

The Error to be Combatted.

Everybody has to eat. Nearly everybody uses oil in some form. Only the comparative few have occasion to buy much lumber. Yet in all the nation there is hardly an individual able to read who has not accumulated the idea in some mysterious way that lumber was almost done—that it soon would be extinct and only a memory.

The lumber people knew better. They kept on making money—plenty of it. They sold much lumber; fortunes were accumulated. What mattered it to them, therefore, that people should get these erroneous ideas just as long as they kept on buying?

The belief that timber was vanishing became so widespread that even the Government believed it.

We all remember how, during the war, a country-wide movement was inaugurated to induce people to trace every possible walnut tree. The Government, it was explained, was in dire need of walnut timber to make gun stocks. Boy Scout troops in every city were started out on a search for walnut trees.

A business man living on a country estate at Lake Forest, a suburb of Chicago, was very proud of a huge walnut tree—the only one on the place.

One day some Boy Scouts came and tagged it. It was listed as part of the walnut-timber assets of that part of the country.

"I really believe," this man told the writer, "if the war had lasted another six months somebody would have come and cut down that tree."

The facts are, according to the American Walnut Manufacturers' Association, that there are enormous quantities of walnut trees growing in many parts of this country.

There are enough of them, an official of the association said to Printers' Ink, to supply legitimate needs for scores of years to come.

"You and I and our great grand-children will be dead long before walnut is gone," he declared.

The Government's campaign made the walnut lumber interests wake up. They reasoned that if the idea about the scarcity of walnut were really as widespread as it seemed, people would quit buying walnut, thinking the price would be prohibitive. The obvious thing was to set the people right by a campaign of advertising. This is being carried on now.

Of course nobody contends that walnut lumber is as plentiful as it was. The idea of using it for fence posts and for rafters in barns has gone out of fashion. But for cabinet work, fine interior finish and similar purposes it is declared there is an ample supply for many years to come.

The people did not know this. It is safe to say they will be surprised when they read the association's advertising in national mediums.

A similar condition of apathy or apparent indifference is to be seen in other branches of the lumber industry. Various associations have taken little forays into advertising now and then. But now the thing seems to have started in earnest in a big national way.

The American Hardwood Manufacturers' Association has begun a campaign in national magazines, the purpose of which is to give the people of the country a better understanding of the lumber business as a whole which is declared to be "the nation's second largest basic industry."

The unuausl feature of this advertising is that it is not going to talk specifically of the varied species of hardwood lumber. Previous campaigns put out by lumber associations have been limited to individual boosting. This effort will be in behalf of all lumber. The benefit to the hardwood association will be indirect.

To Show Underlying Fundamentals.

The campaign which started in July will be carried on by means of a series of advertisements entitled "Glimpses into the Spirit of America's Second Greatest Industry."

Glimpse No. 1 was headed "Similarity of Ideals Is What Makes a Nation." In this it is declared that "next to food, shelter is the most important thing for mankind and for this purpose the various products of trees have been his chief reliance ever since the increasing population caused a shortage of caves. So the American lumber industry is and always has been practically second to agriculture as a facile, dependable and economical reliance for us all."

Glimpse No. 2 shows a picture of a solid bed of eastern hardwood logs which is said to extend for more than two miles and which "in due course will yield over twelve million board feet of the best furniture, trim and specialty woods in the country."

The advertisement reminds its readers that nowhere in the world does the science of lumbering equal American methods.

The third advertisement of the series will picture a track-laying gang repairing a lumber railroad through a flooded Southern hardwood forest. This is supposed to add emphasis to the thought that prevailing prices for lumber do not all represent a manufacturer's profit. It will have as its title "Labor with a Smile Is the Measure of the 'Boss.'" The idea is to supply a valuable commentary on general labor conditions as they are alleged to exist in the lumber industry.

The American Hardwood Manufacturers' Association, it will be remembered, was subjected to injunction proceedings some time ago on a charge of violating the anti-trust law. The court ordered in effect that the various members of the association have no business dealings with each other. This judge's opinion, though not literally his inhibition, extended even to straight-out co-operative advertising of its products. This may or may not have something to do with the decision to start the present series of institutional advertisements. Be this as it may, the association very plainly is doing the kind of advertising now that will put it before the people in a different light.

Advertising's Advantages Better Understood.

"The chances are," said a man connected with the association, "that if this kind of advertising had been done ten years ago the public feeling toward the lumbermen would have been such that the court action never would have taken place. This was based upon a misapprehension of the facts. Of course, we took too much for granted. Or possibly it might be said that some of us were not a-

*In Printers Ink.

much concerned as we might have been about what people thought.

"There is, you know, such a thing as a man taking refuge in his own personal knowledge that he is not the crook or the reprobate that he is said to be. He may know he is doing right and may have preserved his self-respect inviolate. He wraps the mantle of dignity about him and lets the people talk.

"This sort of thing won't work in business. However righteous it may be it is a relic of the old school of merchandising. The lumber industry has been slower than others in fighting its detractors and in letting the country know the exact truth about it. It isn't thoroughly awake yet. But I do believe this campaign of the American Hardwood Manufacturers' Association will open the way for some constructive advertising in which the whole lumber industry will take part by creating a powerful background of public knowledge and public favor behind the various legitimate selling campaigns of the various woods.

"Many of the erroneous ideas are based on propaganda spread either by uninformed sentimentalists who say they want to save the forests from exploitation for commercial purposes or by others for business reasons.

"For example, take the widespread idea that wooden buildings are fire traps. The average person does not know that there really is no such a thing as a fire-proof building. The materials used to make a building may be fire-proof but the building itself cannot be. We have known all along that the insurance companies' rates are in favor of mill-construction buildings, with wood beams and sprinklers. This in itself is sufficient answer. Why have we not advertised this fact? you ask. I suppose the best answer would be to say that the lumber industry has been in the past so automatically successful that it has not realized the insidious encroachments on its ultimate markets. Doubtless when we encounter our next sag we will broaden our conception of advertising. It would be wiser to do it first."

There was a move made four or five years ago to combat the idea that wooden buildings were necessarily highly inflammable, such as the man just quoted speaks about. The National Lumber Manufacturers' Association put out a booklet treating on wood construction and its relation to fire losses in Europe and America. It was called "A Surprise Book." Only comparatively few copies were circulated. It was not advertised, and its revelations went to waste. The war came on and stopped building. The campaign flivvered out for no apparent reason. The book is a convincing presentation —one that would do some good were it given adequate circulation.

Beginning of Institutional Advertising.

The lumbermen's association of Chicago also got out an illustrated booklet a while back as part of some propaganda against a proposed extension of the city's fire limits which would prohibit the construction of frame buildings.

But in general the lumber people have not made any organized efforts to set forth their ideas regarding the safety of frame buildings. Neither have they gone very far in support of their contention that there is yet enough standing timber in the country to supply lumber for many years.

The campaign just started by the American Hardwood Association represents the first real effort to present the lumberman's case in a national way. Close observers believe it is the forerunner of much advertising along this line.

"And when it does get fairly under way," a Chicago lumber man said to Printers' Ink, "some interesting and surprising things will be told to the people. You wouldn't believe, for instance. that there is yet a great plenty of fine pine in the forests of the Carolinas, would you? Well, there is. In the presumably 'denuded East' it will be used for many a year yet.

"People don't believe this and a great many other things they ought to know about lumber. Advertising will tell them."

While the lumber people are thus breaking into institutional advertising it is interesting to note also that they are continuing forward steps in the kind of advertising that can sell lumber directly, as evidenced by the remarkable work done by Cypress — which amounts to a historic citation in the whole field of advertising. Without the least desire to be critical, it must be admitted that while the advertising of species has been notably successful the industry as a whole has neither recognized nor used its greater opportunity. The dogmatism of success, spoken of in the beginning, naturally had a great deal to do with this. The same considerations that would cause the lumber interests to disregard attacks and propaganda would cause them to overlook the value of advertising their wares direct.

But when the light of advertising begins to break it dispels a lot of antiquated notions.

A sawmill has a short life as compared with other manufacturing plants. It may last five years or fifty, depending upon the extent of the available timber in the locality. When the mill finally is obliged to move it may have to begin the production of an entirely different kind of lumber.

Lumber manufacturers, recognizing this basic principle of their industry, are now beginning to see the value of establishing good will. If the lumber buyer can be sold thoroughly upon a certain trade-mark, or even company name, then the producer's good will is going to last, even though he moves to another location and produces another kind of lumber.

The capitulation of the lumber industry to the force of advertising really marks an epoch. Lumber held out for a long time, but now it seems to be preparing to go the whole route.

Spruce Bud Worm Plays Havoc

The spruce bud worm has entered the forests of Northern Ontario and threatens the standing balsam and spruce. They are really myriads of caterpillars who devour the foliage. To trace its pathway a Dominion seaplane with forestry officers and entomologists has arrived from Ottawa to make a study of the situation and at the same time make a survey of the province's forest resources. The aircraft, piloted by Col. Robert Lackie, made the trip from Ottawa in five hours' actual flying, averaging 65 miles an hour. It is hoped to be able to trace the budworm from the air and then advise the timber operators of the rate and direction of the spread, that they may salvage their timber in advance of the outbreak.

Varied Forests of the United States

About 30% of the forest area of the United States, which now totals 463,000,000 acres, excluding 100 to 150 million acres of low grade woodland and scrub, is estimated to be virgin timber. Forests publicly owned in the United States contain one-fifth of all timber standing in this country; forests privately owned contain four-fifths and the private timber is generally more valuable than the publicly-owned.

The publicly-owned forests are mainly in the West and consist of national forests, national parks, Indian reservations, military reservations, and state forests.

The trees of the country are rather sharply defined as to species in the various regions, this being the result, of course, of climatic and soil conditions. The northern forest is the home of the white pine and allied species, such as spruce, hemlock, cedar, balsam fir, besides several hardwoods. Yellow pines predominate in the southern forests, with hardwoods on the better soils and cypress in the swamps. In the central forests are mostly hardwoods, including oak, yellow poplar, elm, hickory, chestnut, red gum, ash and walnut. The Rocky Mountain forest is coniferous with western yellow pine as perhaps the most common tree. The Pacific coast forest is largely evergreen, chiefly Douglas fir, western yellow pine, redwood, western red cedar, other cedars, firs and spruces. Its trees are the largest and its stands the heaviest recorded by history or by geology.

A salesman is generally supposed to be a man who gets an order. Not so. A real salesman is a man who gets an order, profits himself and his employer, and leaves a permanent good opinion of his proposition in the mind of the buyer.

An aerial photograph of Toronto Island showing the wealth of detail that is possible with such surveying methods which will next season be used more extensively by Canadian lumber companies and limit holders (Bishop-Barker Aeroplanes, Photo)

No "Luxury" Building in England

W. Stuart Kay, of Wm. Kay, Limited, Bolton, Eng., was among the delegates to the Ninth Congress of the Chambers of Congress of the Empire, which met in Toronto recently, and took an active part in the proceedings. Mr. Kay called upon a number of representative lumbermen in the city and will visit several plants at various parts of Ontario and Quebec before his return home. He is much interested in the Canadian lumber situation, and his firm handle a good deal of white pine, particularly white pine squares (4" x 5" and 5" x 5") for which he placed a number of orders with a large Ontario concern. Mr. Kay was negotiating for a cheap plain door for use in connection with the housing proposition now being carried out in many cities in the Old Country. Wm. Kay, Ltd., who are well-known timber merchants and woodworkers and manufacture packing cases, boxes, etc., have contracts for supplying numerous houses with interior and exterior trim.

Labor unrest in England is causing business in many lines to remain at a standstill, according to Mr. Kay and constant agitation seems to be the watchward of many organizations. There is a dissatisfied attitude among the workers coupled with excessive demands, which have never before been exprienced. The housing problem is also an acute one and the government and various municipalities are doing their best to overcome the shortage. In Bolton, Lancashire, 5,000 houses are being erected under the government plan, and in some other cities as many as 20,000 dwellings are going up. No "luxury" building is permitted by the government, such as garages, ice cream saloons, billiard parlors or anything of that character. It is feared that the construction of these would take men away from other necessary and more important work. Home building must be taken care of first.

Structural costs are very high and the average workman's house, which could be put up for £250 before the war, now reaches £1000. Many firms are unable to obtain expert workmen for their plants because they have no means of affording them and their families shelter. There is little use in purchasing a domicile. If one is bought that is occupied by a tenant, who has paid rent at a reasonable rate, he cannot be legally dispossessed by the new landlord for two years if he continues to meet the rent. When an employer buys a residence in order to afford accommodation for his help, it does not mean its possession. If the lessee wishes to stay on, he can do so and be within his legal rights until March 1922. The only solution is putting up more houses and to this end the government is directing all influence and affording all assistance possible, said Mr. Kay.

B. C. Spruce Mills Start Building

Wattsburg, B. C., will soon witness great activity on the part of the B. C. Spruce Mills Limited, which company recently acquired the holdings of the Wattsburg Lumber Co. at that place, and some 10,000 acres of the finest spruce available in that vicinity. Ground has been broken for a new plant. While work is progressing on the 12-mile flume which will be used for transporting the timber from the tract to the mill, as rapid progress as was hoped for has not been attained because of the shortage of labor.

Manager B. C. Robson is on the ground directing the work to be done and is highly pleased with the outlook and the vastness of the timber tract which was acquired by his company composed of Michigan and Wisconsin capitalists.

No Increase on Certain Services

Referring to the recent increase in freight rates, says the Canadian Lumbermen's Association, please take particular notice that the judgment of the Board of Railway Commissioners, which forms part of the order of the board, reads as follows:—

"Local switching rates were materially increased by the carriers about ten months ago, and these, together with the tolls for interswitching, it is not the purpose of this judgment to increase. The same must be said of the charges of such other incidental services as milling in transit, diversion, reconsignment, stop-overs, demurrage, weighing and the like."

Special supplements to tariffs have been received from the Canadian Pacific Railway, Grand Trunk Railway System, Canadian National Railways and Central Vermont Railway Co. At the top of page 2 of the Canadian Pacific tariff under "Application of Rates," the paragraph "Charge for switching, transit, etc.," has been pointed out to the Board of Railway Commissioners as not complying wtih the order of the board and they have taken it up with the Canadian Pacific and the matter will be corrected.

The Grand Trunk and Canadian National tariffs are about identical, but in the Central Vermont Railway C. tariff appears the following under "Exceptions":—

"This supplement does not increase rates on building sand, gravel, crushed stone; or charges for terminal or transit services or facilities, switching, weighing, demurrage, car service, transfer, diversion, reconsignment, refrigeration, icing, storage, elevation or other special services."

This latter tariff is in accordance with the judgment and order of the board and will obtain in all cases.

Members, therefore, will please refuse to pay any increased rate for any of these services and in the event of trouble kindly communicate at once with this office irrespective of the railway company concerned in the matter.

The secretary of the Canadian Lumbermen's Association has also received the following notification:—

Department of Marine and Fisheries,
Ottawa, 16th Sept., 1920.

Sir,—I have to inform you that this Department is advised that the British Board of Trade have decided to withdraw all concessions in connection with the carriage of timber deck loads to the United Kingdom which were made during the war and allowed also during the winter of 1919-1920 and that the strict requirements of Section 10, Merchant Shipping Act, 1906, and of regulations made there under will be in operation during the coming winter.

I am, Sir,
Your obedient servant,
(Signed) E. HAWKEN,
Acting Deputy Minister.

Short Methods in Applying Inspection Rules

Figuring the percentage of cuttings. The most useful short method is one used in determining whether a board contains a certain percentage of cutting. This may be called the Unit Method, says the National Hardwood Lumber Bulletin, on this question.

The unit used is 12 square inches, the equivalent of a piece 1 inch wide by 1 foot long.

Multiply the width in inches of each cutting, by its length in feet; add the products thus obtained and the result will be the number of units of cutting in the board.

To determine the number of units required for 66 2/3 per cent cutting, multiply the exact surface measure of the board by 8; for 50 per cent. cutting, multiply by 6; for 25 per cent. cutting multiply by 3; for eighty per cent., multiply by 9 3/5; for 20 per cent., multiply by 2 2/5; for 33 1/3 per cent., multiply by 4. (The last two are useful when it is more convenient to figure the amount of waste instead of the required cuttings).

For example, suppose a board 9 inches wide by 16 ft. long has the following cuttings:—

8½ inch × 6 ft. = 51 units	4 inch × 2¼ ft. = 9 units
3 inch × 9½ ft. = 28½ units	3 inch × 3 1/3 ft. = 10 units

Total 98½ units. The board contains 12 ft. surface measure, and the number of units required for 66 2/3 per cent. cutting is 8 times 12 = 96 units; this board therefore contains more than 60 2/3 per cent. cutting.

If this board is oak, and if the above cuttings are clear face cuttings as defined in the rules, and if the clear face of each cutting is found on the poor side of the board, and if the board does not contain heart for more than half its length, the grade is No. 1 common.

To determine one-sixth the length of a board, multiply its length in feet by 2; the result will be the required number of inches; thus, one-sixth the length of a 12 ft. board is 24 inches, one-sixth of 13 ft. is 26 inches, etc. This is useful in determining free wane and the amount of wane constituting a standard defect.

To determine one-third the length of a board multiply its length in feet by 4; the result will be the required number of inches.

To determine one-fourth the length of a board in (grading Wide No. 1, and in applying the restriction as to heart in No. 2 common) multiply its length in feet by 3; the result will be the required number of inches.

To determine one-tenth the length of a board (in grading Panel) multiply its length in feet by 1 1/5; the result will be the required number of inches; thus, one-tenth the length of a 10 ft. board is 1 1/5 times 10 = 12 inches; one-tenth of 16 ft. is 19 1/5 inches, etc.

To determine the amount of thin lumber by resawing a given amount of any thickness:

For 5/4 resawn once, add 3/5 to the original amount.

For 6/4 resawn once, add 1/3 in three pieces, multiply by 2; resawn in four pieces multiply by 2 2/3.

For 7/4 resawn once, add 1/7.

For 8/4 resawn in three pieces, add ½.

To reduce 7/4 lumber to 6/4, subtract 1/7.

The New Bankruptcy Act Explained

At the annual convention of the Chartered Accountants, held recently in Toronto, G. T. Clarkson, F.C.A., explained in detail the causes for and the provisions of the new Bankruptcy Act, explaining at the same time the benefits it entails.

Chief among these, he said, was the fact that it was easier for an honest bankrupt to obtain his charge, while means were provided to prevent a fraudulent debtor from so doing.

Since 1875, when the Dominion Bankruptcy Act of 1869 was repealed, he said, the liquidation of the estates of bankrupts had been covered by provincial assignment acts. The Dominion still held control under the Winding Up Act, but this act was not looked upon favorably on account of the expense it involved.

Such conditions, stated Mr. Clarkson, had necessitated the framing of the new act last year. The act provided for a division of estates in a similar manner and under the same basis as the Assignment acts, but had to do with the whole Dominion.

Mr. Clarkson pointed out that under the new act the husband or wife of a debtor could not claim a settlement for money loans or services rendered until such time as all other claims had been met. Likewise, a landlord could not claim more than three months' rent prior to a settlement with the other creditors.

Mr. Blair Makes a Statement

Editor, Canada Lumberman:

In your issue of September 1st, page No. 184, I noticed a short article in regard to Mr. Louis S. Rolland, and from my long acquaintance with this young man, I hardly would credit the statement made therein as coming from him; because in spite of the fact that I note with pleasure the advertisement of my old friend Mr. Louis S. Rolland, having formed a lumber company—to which I offer my very best wishes for success—with your permission, if you will give me just a little space, I would like to offer your readers, as well as my many friends, that I take exception to a certain statement in your second to last paragraph, where you say—"Mr. Blair was also interested."

In regard to Mr. Rolland and his connection with Mr. Blair during the period that the firm of Louis Rolland & Company existed, I wish to say that the reason for this firm being called "Louis Rolland and Company" at that time, was because Mr. Blair was actively interested in the closing up of an old lumber company with which he had been connected for a number of years—this company closing on account of the death of the proprietor. Immediately on this work being completed, he changed the name of "Louis Rolland and Company" to read "Blair and Rolland" of which Mr. Blair was chief owner ;and it so happened that during the time this partnership was working under the style of "Louis Rolland and Company," its main source of supply was maintained by reason of Mr. Blair being responsible for the interests of those then furnishing this said company. Also, not long after the formation of "Blair and Company" it was deemed expedient by Mr. Blair, for future business, that this partnership be changed to an incorporated company, which was done, leaving the "Blairs" with 75 per cent. or more ownership.

No doubt my old friend, Mr. Rolland, was not properly quoted in your issue of September 1st—if so, he has forgotten the facts which I give above. If at any time, proof is required, I shall be glad to furnish same. Yours truly—W. B. Blair, Montreal.

Wooden Doors Dating Back to Middle Ages

Among the famous doors of history are the carved wooden doors of the church of Santa Sabina, Rome, depicting in relief, scenes from the Old and New Testament. These are one of the most remarkable examples of early Christian sculpture extant.

In the earliest times, as in Babylon, doors swung on sockets instead of hinges. In Roman days wooden doors were decorated with bronze and inlaid, and throughout the Middle Ages richly carved doors of wood adorned the churches. In the Gothic period, wooden doors were decorated with wrought iron hinges which were often elaborated into intricate ornamentation covering a large part of the door. The doors of the cathedral of Notre Dame in Paris of the 13th century, are the finest examples of this class. During the Renaissance in Germany and France elaborately carved doors were among the most beautiful products of wood sculpture.

In the case of interior doors, splendid oil polished mahogany doors were important features in some old English homes and there were old oak doors of wonderful beauty, especially when found in oak panelled rooms.

Haphazard selection of doors of the ready-made variety should not be allowed in the building of a fine home, but the doors should be designed by the architect who builds the structure that they may be in keeping with the general style of the house. Upon the attractiveness and distinction of the door and doorway depends the visitor's first impression of the home he is about to enter.

Fear Has no Place in Business

Fear is a timidity grown up. It is a paralyzing force which enchains us.. If we are constantly afraid of some evil befalling us, it is almost sure to overtake us in time.. Our very attitude of mind courts the coming of that disaster, says the "Paper Trade Journal."

The man who is afraid of taking any responsibility, will always be an underling.. There is an old saying that, "He that fears leaves, must not come into a wood." And the man who is gunshy of obligating himself of any regular duties, or the meeting of definite financial obligations will never adventure very far and never grow very rich.

A certain amount of fear is given to us for our protection, but that fear is only in the nature of caution. It is to prevent impulsive and over-hasty action. It is always undesirable that we should have about us anyone who fears us, for again the old maxim speaks truly when it says, "He that fears you present, will hate you absent.". Hatred is to be avoided, for thoughts are things. It is much better to have people work for us because they want to, than because they have to.

As a rule, it is much wiser for us to stop and examine the thing which awakens fear within us. The ghost with the up-pointing finger by the woodshed door, proves to be nothing but an old tree with a bare limb. The mysterious foosteps on the porch outside, are the night noises in the maple which overhangs the porch. The terrible financial disaster which we see approaching, and which causes us to tremble, is likely to prove a mere scare head, if we walk right out and meet it. Certainly nothing is gained by running to cover.

The man in business today has to have his nerve right along with him. He cannot be ready to back water at everything, or to shrink into himself at the approach of the first obstacle. What appears to be a big difficulty, may prove to be a very small one or none at all.

One of the surest ways to overcome fear or a natural tendency to fear, is to associate with strong, successful, aggressive people; to read biographies of those who had achieved surprising things in the face of many handicaps; and to cultivate the habit of overcoming our own mental confusion.

Have you ever stopped to think that the reason we are afraid, is because we suffer from idea-rout? That is why we become frightened. Our calmness, our poise, our clarity of though are dissipated by something which disturbs us, but once we get right hold of ourselves and realize the truth, we cease to be frightened. The big man of whom we have stood in awe, is likely to be the simplest, the most human and the kindliest of fellows. Fear of a financial panic which perhaps has kept us awake nights, is just what lots of people have been waiting for, knowing that it will give them opportunities to get rich, for a single dollar then may develop the purchasing power of two dollars.

The big deal into which we have been afraid to go, loses its terrifying aspects when we consult a banker and perhaps our lawyer, and realize where we can safeguard ourselves completely against loss.

Have a little faith in yourself. If you do not believe in your own powers and ability, you must not blame other people if they doubt them too. Live a life of such uprightness, industry, square dealing and the prompt meeting of your obligations, that you can look every man in the face without being afraid of any of them. Then you can go blithely out, knowing that you have as good a chance in the world as any man.

Fewer Men Being Hired for Woods

The lumber operators of New Brunswick are now sending the first of their crews into the woods and are engaging men to go in later in the year. The outstanding feature is that fewer men are being hired this year than last because operations are to be curtailed. Last year there was a considerable expansion of operations in expectation of stocks of manufactured lumber moving rapidly out of the country on account of improved transportation by both land and sea. This movement never occurred. Ocean freight rates remained at a high level which only very recently showed any tendency to subside. Railway congestion continued on account of lack of cars and on account of labor troubles. The result has been that mill-yards all over New Brunswick have remained piled high with deal, boards, etc.

Pulpwood and Its Varied Activities

New Eastern Pulpwood Concern

The Jost Pulpwood Co. of Campbellton, N.B., was recently granted incorporation. This is the new organization formed to take care of the rapidly-expanding business of the Jost Co., Limited, Montreal, in northern New Brunswick and Eastern Quebec, including the Gaspe Peninsula. The idea of this is to give a more complete service to the many producers and shippers of pulpwood in that section and get in touch with them through a local organization, which will be managed from Campbellton. The firm believe that a local organization will be able to foster to better advantage any opportunities that present themselves in that district.

It is not the intention of the new company to go into operating on any large scale, but their policy is to be in a position to handle the finished product. Any operations that they carry on will be in the nature of assisting in a financial way any producer who wishes to erect a rossing plant or extend his operations in the pulpwood business in a definite line.

The Jost Co., Limited, of Montreal, of which P. M. Jost is president, say that the prevailing prices for rossed spruce and balsam pulpwood were never higher than at the present time in and around Campbellton, N.B. This applies to "spot" wood and to long-term delivery. The prices in the Campbellton district depend on the freight haul from shipping point, and command at the present time from $20.00 to $25.00. Continuing, Mr. Jost says: "While the production of peeled pulpwood this year is, no doubt, going to be larger than it was last season, a careful canvass of the situation, convinces us that perhaps the production is not going to be as great as we anticipated. While the prices were good during the early part of the peeling season during May and June, very few jobbers or mills cared to make advances and contract for wood at the high prevailing rates. This resulted in the farmer suspending his peeling operations. On the other hand, it seems that perhaps the production of rossed wood will be greater than heretofore, as many lumbermen who have always put their lumber into manufactured wood, are looking into the pulpwood business, and are making a limited, and, in some cases, putting considerable of their logs into pulpwood. We know of two or three instances where such operations have been undertaken, and the high prices which pulpwood commands at the present time, would warrant the lumberman using their small logs in any event for pulpwood.

While many are looking for a drop in the present high quotations for wood when the first snow roads come, and wood begins to arrive at the stations and sidings, it does not look as if any immediate drop in price is likely. As the market for pulpwood is very strong at the present time, we do not believe that enough wood will come out during the early winter months to more than take care of the actual requirements of the mills. In any event, the car situation is not likely to improve materially so as to enable the mills to get delivery of any more wood than they require for their immediate use, and they will not likely be able to accumulate any surplus in their yards. While we may see a slight decrease in the extreme prices now being paid for spot wood, at the same time our firm is not looking for any big reduction in price, as practically all the wood that has been made, and is being made, is manufactured on a high scale of wages, and cost must be taken care of at current prices. Practically all producers of pulpwood are able to hold their wood for the prices that they are asking."

Lumbermen Getting Into Pulpwood Game

Word received from Fredericton, N.B., is to the effect that more and more firms are getting into the pulpwood business and establishing rossing plants. A considerable number of those engaged in the lumber industry are fitting up departments in their mills to ross wood. Among these are O'Brien's Ltd. and James Robinson of Chatham, N.B. It is becoming increasingly difficult to get the necessary labor to go into the woods and peal during the summer months, and there can be no doubt that the supply of peeled wood will quickly diminish and its place be taken in the near future by machine-rossed wood.

Has Riordon Bought O'Brien Limits?

Deep interest centres in the report heard in Haileybury, Ont., that Senator M. J. O'Brien of Renfrew had disposed of his vast timber limit in northwestern Quebec to the Riordon interests.

This limit is among the largest in Canada, and lies adjacent to the Des Quinze series of waterfalls, at the north end of Lake Timiskaming. It is this area to which the Ontario Government proposed last spring to extend the Nipissing Central Railway from New Liskeard, which work has not yet, however, been commenced. It is also to this point that the extension of the Mattawa branch of the C. P. R. is headed.

The Riordon Company has its Kipawa plant situated at the south end of Lake Timiskaming, 60 miles from the O'Brien limit. This plant is surrounded with a huge limit of its own, and it has not been learned whether the O'Brien purchase is for the purpose of adding to these reserves, or marks the first step in the establishment of another huge plant at the Des Quinze waterfalls.

Mr. Backus and English River Limit

A deputation from Kenora waited upon the Ontario Government recently, asking that certain concessions be granted to E. W. Backus of the Fort Frances Pulp & Paper Co., in regard to the English River timber and pulpwood limits. It developed that the Backus interests are willing to have the English River limits put up to competition and to take their chances on the bidding. They stipulated, however, that in such a case they would not be bound by any agreement to the town of Kenora regarding the erection of a pulp and paper mill on the assumption of certain obligations in connection with the power plant of that town. Representatives of Kenora pleaded with the government to grant a permit to the Backus people without competition but fix its own price on the pulpwood.

In writing to Premier Drury, Mr. Backus said that he had no objection to timber and pulp limits being sold by public tender and only regretted that this course was not adopted sooner, so that development work might have been proceeded with several months ago if the tender of his company had been accepted. "If you will put the English River area up for public tender," he said, "I shall try and meet my competitors on common ground, but if I must do so, I certainly cannot be bound with any agreement with Kenora, which was conditional upon its securing the raw material for the mills." It appears Kenora will be in a bad way if it does not get the big pulp mills, which Mr. Backus proposes erecting there. The town has had the Backus people submit a tentative to the agreement in which one of the stipulations is that they would, if necessary, reserve 50% of their output for Canadian publishers.

Various other matters were discussed and Premier Drury stated that a strong case had been made out and that the whole question would be decided by the Cabinet in the near future.

Britishers Want Quebec Pulp Lands

Although it cannot hold out the temptations to immigration which are possessed by Ontario and more especially by the Western provinces, Quebec is at the present more prominently before British investing public than any other part of Canada, says a cable from London, Eng. Lt.-Col. P. Pelletier, Agent-General of the province, said that he has been approached during the past two months by a large number of British financiers who desired to purchase pulpwood limits along the North Shore in Gaspe, in Chicoutimi, and in other districts.

It is understood here that Sir Lomer Gouin will shortly come to London to interest British capital in the pulp and paper opportunities of Quebec. Sir Lomer's brief outline of these advantages at the Canadian Club banquet in London was widely commented upon by the British press at the time, and before he returned to Canada he was in touch with several British capitalists interested in this line of business.

Development of Ancient Colony's Resources

Important development of the great pulpwood resources of Newfoundland is about to be undertaken under grants to two pulp and paper manufacturing companies made at the last session of the colonial Legislature. One of these companies is British, the other Norwegian.

The mills of the British concern will be located at Bonne Bay, half way up the west coast. This port is the centre of winter herring fishing activities. In its vicinity are large areas, thickly wooded with spruce and fir, through which flow rivers which will afford good water powers as well as facilities for floating logs.

Bonavista Bay, on the east coast, is to be the site of the Norwegian company's mill. Cod fishing at present is the great industry there. Backward from the bay runs a series of well-wooded valleys, drained by rivers of good size.

Minister of Lands and Forests.
Toronto, September 13th, 1920. 19-20

Early Rains Put Out Forest Fires

Statistics prepared by the provincial forest branch of B. C. covering the season to date, show that 981 forest fires have been reported to the dept. It cost the province $182,408 to extinguish them. Vancouver district, which includes Vancouver Island, had a record of 299 fires, costing $45,500, with Nelson district next in line, with 248 fires, which cost $65,000 to extinguish. In the Cranbrook area 98 fires were reported and $40,000 was expended putting them out. In Kamloops district, which is in the dry belt, only 75 fires were reported, the cost being set at $15,000. Vernon district had 76 fires, which cost $14,000. In Northern B. C., Prince Rupert district had 56 fires, the cost being $456. Cariboo had 50 fires costing $600, while Prince George district reported 79 fires which were put out at a cost of $1,850.

Fire hazard for the season has apparently passed, in the Coast districts at least, where an abnormal rainfall marked the second week in September, usually quite a dry, hot period. The Kamloops district reported snow-fall in the higher levels of the forest area in the same week.

TIMBERLANDS FOR SALE

We have many attractive properties listed with us, for sale, in all parts of Canada and Newfoundland, in both Freehold and Crown lands.

BRITISH COLUMBIA
Large tracts of Cedar and Spruce situated on tide waters and the larger rivers, with or without saw mills.

NEW BRUNSWICK

Review of Current Trade Conditions

Ontario and the East

Conditions in the lumber line are rather quiet at the present time. Some wholesalers report that a fair amount of stock is moving, but generally there is a disposition on the part of retail dealers to buy only for immediate requirements. White pine values are holding but spruce and hemlock are off a bit. The building outlook is somewhat uncertain and the tendency of nearly every industry is to curtail and unload as much goods as possible. What is characteristic of the other activities is also applicable, to a large extent, in the lumber arena. It is anticipated that there will be a large number of men seeking work in the bush this winter. Hundreds will be returning from the west, and, as many factories have laid off hands, there may be some difficulty in the wanderers finding employment except in the woods. While wages asked are $70.00 to $75.00, along with board, it is predicted by some loggers that there will be a drop before many months.

Most of the lumber camps are not putting in as many crews this season as last, and the building outlook is rather precarious. Then, too, many other factors have entered into the situation and tended to perturb conditions. First, there was the general labor unrest and then came the business tax of 1% and 2% on all sales, and lastly the 40% jump in freight rates in the east.

"Is it any wonder," remarked a leading Toronto wholesaler this week, "that business is shot to pieces in some lines. Just as soon as conditions begin to settle down or to become stabilized, there is a strike, a new tax or some other disintegrating factor. The Government and the railways, along with labor, are largely to blame for the present quiet period. It has all had a deterrent effect on building, and unless more structural enterprises are undertaken, I can see where some firms are going to have a good deal of stock on hand. I do not believe in prophecy. So many standards have been upset, but you cannot expect conditions ever to become normal as long as so many unforeseen cost-increasing regulations, in the way of getting the stock in the hands of the retailers and on the market, continue. Additional labor demands, increased freight rates, scarcity of cars, business sales tax, and I don't know what next, are all having their influence in keeping back the period of readjustment and reconstruction, concerning which so many fine theories have been spun."

Most of the cars of B. C. stock that were put in transit before the new freight rates went into effect have been sold, and naturally there is not much doing in western stuff at the present time. The principal topic of discussion is the new freight rates and whether the B. C. mills will assume any portion of this extra charge has not yet been definitely decided. It is reported in certain quarters that the operators will take care of part of the additional levy, while other manufacturers say that, owing to the excessive cost of production they are unable to do so. There the matter stands at present but it is expected a definite decision will be reached in a few days.

An Ontario representative of a live lumber firm, who has been spending several weeks in the north and is thoroughly familiar with conditions, says that mills are paying men $75.00 per month with board, and that these figures cannot get suitable workers. At one point twenty-five men jumped in one day. In a single week one concern hired fifty-seven men, fired four and fifty-two jumped. It has been the same routine during the last few weeks. "On account of the labor situation and market conditions, there has," he continued, "been very little done in the bush as yet. Several companies have not put in any men, and those firms, which have started opeations, have only a few workmen in the woods. When the harvesters return and the mills close down, the labor situation will, in all probability, be relieved. Even if the camps were to fill up this week, the fact remains that they are from one to six weeks behind."

"This," added the speaker, "looks to me as if production for 1920 will be very low. This state of affairs, coupled with the extra high wages and decrease in efficiency, makes me believe and feel that prices will not go very much below present levels; in fact, if there is any demand at all next spring, I would look for a raise in price. I understand that one firm in the north have their camps filled up, and this is because they have a large burned limit to clear. They are paying up to $85.00 a month. Their intention is to clear this limit and then close their camps early in December. I do not think they have sleigh roads to build, but skid their logs to the water. There is, of course, a lot of 1920 cut of white pine still in the manufacturers' hands, as well as several lots of hemlock. Then there are unusually heavy stocks at mill points held by wholesalers. Some of this may be sold at reduced prices during the next few weeks. From the standpoint of the manufacturer, I cannot see where values will go much lower than they are at the present time."

United States

Business is generally quiet and values have fallen in some lines of forest products. The general attitude is one of mark time until the Presidential election is over and trade again gets on the upward swing with building operations resumed on a larger scale than has prevailed for some time. No real live condition of affairs is expected before the end of the year and perhaps it will be next spring before the revival fully sets in. The recent advance in freight rates has, just the same as in Canada, been a disturbing element and tended to depress matters materially. Buyers demand that the mills should pay the extra carrying charge and, while some manufacturers have yielded for fear of losing business many of the large ones entertain the other view of the matter.

The majority of the larger mills are maintaining their prices and most of them are accepting only those orders that meet their ideas of values. But a good share of the current volume of business is being actively sought by mills that need orders and concessions are seen in virtually the entire list. Timbers are a single exception, having held firm with a tendency to further stiffening in the 14 and 16-inch sizes. Conservative opinion is that recession in prices will continue, but conditions indicate that it will be gradual.

Hardwoods continue inactive, due to extreme dullness of demand from industrial consumers. Here, too, there are indications of greater stability within the next two or three months. Many lumber-using industries are depleting their stocks without replacement and a period of buying is in prospect despite the reduced consumption. Railroad buying of hardwoods is more in evidence, but there is little change otherwise in the current situation.

From Buffalo comes the report that very little is doing in the hardwood line and trade is small in volume compared to a few weeks ago. Hemlock shows but little change. There are some inquiries but prices are still uncertain. Trade in southern pine remains quiet. Prices continue uncertain and ample stock is obtainable. There has been a decline in the price of shingles. The demand has fallen off because of the many substitutes for shingles that are being used. The lath trade is quiet. The market for western pine remains quiet. New price lists show some advances. Retailers report business rather quiet and they are buying only absolute requirements.

There is generally in every city much speculation as to the future trend of lumber prices. It is generally known that there is a wide range in prices, depending upon conditions in the several sections. Manufacturers whose financial situation is such as to make unnecessary any large concessions in prices are holding firmer than those whose financial necessities require prompt movement of their product. With an improvement such as is expected when the spring buying movement opens up, students of the market look for the early elimination of the low prices, because of their too close proximity to the cost of production to make for a safe margin of profit; at the same time no general advance over highest prices now prevailing is expected, but that values next season will show a greater measure of stability.

In Detroit, prices in a number of southern pine items have advanced slightly, but this has been due to the fact that transits have governed quotations for the past few weeks and these are pretty well taken up. B and Better edge grain flooring is being offered at $110 for 1x3, and $110 for 1x4 and 2x4 dimension in 10 to 20 feet lengths is quoted at $47.25. Buyers are cautious and believe that present local stocks are adequate to take care of demands pretty well for the remainder of the season. General factory conditions are still unsettled to a certain extent, which has curtailed several new projects which have been under way or contemplated. There were 191 permits granted in Detroit for the past week, totaling $2,890,186, compared with $597,145 for the previous week.

In a recent article entitled "Getting Back into the Main Road" there appears the following timely observation in "Lumber" of St. Louis:—While admitting that there is considerable, not to say sufficient, excuse for pessimism these days, we refuse to believe otherwise than "behind the night there is plenty of light and things are all right." The trend of events, industrial and political, is evidencing

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. Bole, Pres. F. H. Goff, Vice-Pres. E. C. Barre, Gen. Mgr. W. A. Saurwein, Ass't. Mgr.

a slow but sure return to national sanity, and when that result is definitely accomplished and thoroughly established there will begin, in our humble opinion, a period of prosperity that will permeate the entire world. It will not be prosperity of the evanescent or spasmodic kind, such as this country experienced during and immediately following the European war, but prosperity of a permanent kind, built upon a solid foundation of experience; a prosperity that will permit the world to substantially rebuild and rehabilitate itself.

Great Britain

In a recent report on the timber market Alfred Dobell & Co. of Liverpool, say: The consumption of New Brunswick and Nova Scotia Spruce Deals was disappointing. Values were easiear and stocks are sufficient. There has been no change in the Douglas fir situation since our last report. During the past month there was very little change in the position of Scandinavian Deals and Boards. There was a slight improvement in the consumption of Flooring Boards. Values were easier.

The consumption of pitch pine slightly exceeded the import, but the stock at Liverpool and Manchester, which still amounts to over 2,000,000 cubic feet, is ample. Quotations for forward shipment have advanced in sympathy with the depreciation in value of the £ sterling.

The dullness in the demand of hardwoods still prevails, the present labor unrest and adverse American exchange being depressing factors. During the past month the import has been moderate, and stocks, which are ample for present requirements, are only moving slowly into consumption.

The market continues dull for East India teak and stocks being heavy, buyers will not commit themselves to further purchases. There were no Auction Sales of mahogany held during August. The quietness in the mahogany trade generally continued throughout the month but some activity was shown in the disposal of part of the stocks of inferior wood. With the reduction of the quantities of this description in first hands it is hoped that the market for all grades will show an improvement. Large prime logs have been continually in strong demand, but the number of these available is very limited. The import during the month was light and the prospects are that arrivals will be restricted for some time to come.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

General Lumber Trade at St. John is Quiet

During the last two weeks a dullness has pervaded the export market for spruce both to United States and to Great Britain. Prices for United States delivery are not reduced to any extent, but no sales of any size can be made as no one seems to want to purchase ahead, prefering to wait and buy only as wanted.

The English market is at the moment very sluggish. No prices are obtainable, and buyers refuse to purchase. Freights are not steady, with a lower tendency.

No sales or contracts are being made by brokers here for next winter or spring's delivery of portable mill stocks. They refuse to trade at any price and will not advance money to any one, claiming that it is too much of a chance even though they are offered winter cuts of portable sawn lumber as low as $30 to $32 per M., St. John. Should this condition keep up only a very limited portable cut will take place, which no doubt will have a good influence on the market for next year. This condition of affairs will also be found in logging. Practically no logs will be cut on the upper St. John to come to St. John. Messrs. Stetson, Cutler & Co. will probably cut about ten million or less. Murray & Gregory, Ltd., about 1½ million. Randolph & Baker three to four million. Messrs. Stetson, Cutler & Co. are carrying over a large stock of logs. Murray & Gregory, Ltd., will cut for their mills near home on the lower section of the river, and Messrs. Randolph & Baker the same. The St. John Lumber Co., whose mills are at Van Buren, Me., will only cut about 10 to 20 million against a usual 40 million.

The mills at St. John will therefore not be loaded up with any great quantity of logs and will be in position not to saw unless the market shows a profitable price. The mills are still sawing, but very little shipping is taking place, and no inducements are held to ship any stocks at present.

Local business at the factories still remains good and shows considerable repair work taking place all over the country. Prices have not weakened.

Laths and shingles on the local market remain unchanged.

Export Business Falls Off Decidedly at Quebec

Shipping activities in regard to timber and sawn lumber from the port of Quebec has almost come to a standstill. The slackening off set in towards the middle of September and Quebec exporting firms consulted say that this change in conditions is due to the fact that the markets in the United Kingdom have stopped buying and that this also applies to the American and the Canadian markets. The only shipments noticeable in the present are small parcels of deals and spoolwood. The steamer "Bitmore Head" arrived at Quebec from Montreal on the 19th to complete a cargo, and was desirous of loading up 700 standard of deals but could only obtain 200 standard for the reason that the Quebec lumber firms had no orders to fill. The goods are here and owing to the low depth of water in the St. Lawrence between Quebec and Montreal, the ships are most anxious to come to the port of Quebec for timber and deals, but there are no cargoes for them on account of the state of the United Kingdom markets, which are practically all closed as far as buying is concerned.

There is very little demand for the American market, while the Canadian market is quiet. There is a feeling in the Quebec trade, however, that when the presidential elections in the United States are over, there will come a reaction in favor of the Canadian lumber trade. One of the causes for the stagnation in both the American and Canadian markets is the slump in the building trade of both countries. The cause is primarily due not to the cost of timber and sawn lumber but to the high cost of other essential materials and the shortage of cement. The demand for the latter has greatly increased for the product in the district of Quebec, and, it is understood, the same applies to all parts of the province, where the article is manufactured. The demand for cement does not alone apply to the cities and towns. The farmers in the country are seen building the foundations of their homes with cement, and in the more up-to-date villages using it for sidewalks. In the meantime there are signs of a change in conditions. The requisition for house acommodation in Quebec and, in fact, the whole province, has become so insistent that the municipal councils are discussing the question in all its seriousness. The New York State Legislature is being called for a special session to consider the question and adopt a scheme for the promotion of building, and, no doubt, the result of this session will give an impetus to building, which will affect the Canadian market.

It is rather difficult at the present to forecast the cut and manufacture of timber and sawn lumber for the 1921 market. The Quebec correspondent of the "Canada Lumberman" has discussed this question with the leading limit holders and mill owners of Quebec, who say it is a difficult question to answer at the present. They all agree that logs will be no cheaper this year and point out that the big end of the cost will be in the production of logs, and if labor seeks higher wages, the cost of manufacture will naturally advance. They point out that the big and continued increase in the demand for pulp and paper and pulpwood means that the way things look today there will be a large curtailment of labor in the lumber trade for the reason; that by a higher scale of wages in the manufacture of pulpwood, labor will be attracted from the cutting and manufacture of lumber. Another feature in the pulp and paper and pulpwood trade to be reckoned with is the larger profits in comparison to the manufacture of lumber. One of the largest and most important Quebec timber and lumber firms, discussing this phase of the wood business, demonstrating the difference in profits, said that 1,000 manufactured deals, if put into the finished product, of pulp and paper, would be double its value to the manufacturer.

Another feature in the province of Quebec timber and lumber trade is the possible scarcity of timber and manufactured lumber in the near future by its abandonment to enter the field of pulp, paper and pulpwood trade by the attraction of its larger profits. This question was discussed by the correspondent of the "Canada Lumberman" with one of the members of a Quebec trading firm, who admitted the possibility. The province of Quebec is at present covered with explorers representing the pulp and paper interests of Great Britain, France, Belgium, as well as the United States in search of limits to purchase.

Viscount Burnham, president of the Imperial Press party and proprietor of the "London Daily Telegraph," who remained over in Quebec to visit timber limits and pulp and paper mills in the Saguenay district, in which he has acquired a financial interest, was the

Wycliffe, B.C.

guest of honor at a lunch meeting of the Quebec Canadian Club held at the Chateau Frontenac, September 21st, and, in the course of a speech he made, said that he had seen during his trip something of the unlimited limits of the timber resources. "We have," said his Lordship, "had a stone age, the bronze age and the iron age. Perhaps this will be known as the paper age. We sometimes talk as if paper only meant newsprint. Our consumption of newsprint in Great Britain is only one-sixth of the total consumption of paper." While he thought Canadians had been wise in refusing to be mere lumbermen and export pulpwood, it would be defeating our own objects and lessening our own prosperity by refusing to export pulpwood.

The influx of explorers from Europe and the United States, who are now to be found in every section of the forest properties in the province of Quebec, is beginning to cause serious reflection on the part of the Quebec Government and those identified with the timber and lumber trade, who fear that the demand will make such inroads into the forest wealth of the province as to deplete the wood asset before the scheme of reforestation has been seriously put into practice.

One of the questions that is now agitating the minds of the Quebec timber trade as well as the Government is the actual extent of the forest areas of the province. No real survey has ever been made up to the present, with the exception of the 45,000,000 acres under license and the approximate 75,000,000 acres of land still free of license, practically virgin forest, while on the other hand something like 1,000,000,000 feet of timber have been already cut from the licensed areas, and it is calculated that four or five times more than this amount can still be removed from the same lands without unduly exploiting them and endangering the future supply.

The Quebec Government is paying more attention than ever in the importance and value of its forest wealth, and has come to recognize that the most important fact is to ascertain the actual extent of the forest property of the province. To this end the Government has decided to institute an inventory of the entire forest lands of the province, a work of no small magnitude. It will be carried out systematically under the expert supervision of Mr. G. C. Piche, chief of the province of Quebec Government Forest Service. To begin with forest posts will be established at Hamilton Bay, Ungava Bay and James Bay, from which centres foresters will go out and make inventories. These posts are to be connected by means of wireless telegraphy, and at the same time the aeroplane is to be called into rquisition for the purpose of making photographic surveys. Thus it will be seen that the Taschereau Government is not only desirous and anxious to learn the real and full extent of the forest property of the province, but to prevent the forests from being wasted or over-exploited.

Ottawa Reports Shortage of Labor and Cars

A serious shortage of woods labor, together with a sharp decline in the availability of foreign cars, and a general slackening of trade, marked the Ottawa Lumber market during the closing period of September. The slow call for lumber and lumber products, came as a distinct surprise to those of the trade who in June and July most optimisticly prohpesized "good" fall business. Despite the circumstances the trade was hopeful that business would yet pick up.

Prices remained firm in all grades. Lath and shingle stood at their previous quotations. The demand for sash and door, if anything fell away. Woodworking factories and plants reported a lessened demand and business on the whole was chiefly confined to box, furniture and other manufacturers.

As gauged from the principal or most important angle, that of manufacture and source of supply, the market seemed to be in the most unstable condition that it has been for many years in relation to bush labor.

The programme previously designed and hoped for in the bush operation of the Ottawa Valley is not being fulfilled or carried out. This may seem a rather strong assertion to some manufacturers or the trade in general, but it's the truth.

The correspondent of the Canada Lumberman has been cited several instances, where woods production is not only going to fall, but is actually falling down. Without naming any particular company the following is a concrete example:

The company this year in one operation intended to establish and operate eight camps instead of six. Each camp was to be manned by one hundred men. The result was that six camps began operations with fifty instead of one hundred men each. The operating camps were not filled, but the company nevertheless held some slender hope that they would ultimately establish the two extra camps and carry out their particular operation. A special representative and employee of the company set out at Ottawa to get one hundred men, at particularly high wages. He got six men.

Generally in trade circles considerable apprehension was attached to this year's woods output. As previously forecasted in these columns the likelihood is that the cut of the Ottawa Valley this year will drop—and perhaps drop heavily. John R. Booth, and other leading companies have, so it is stated, a very considerable number of logs "stranded" owing to low water. These logs were cut last year or perhaps two or three years ago. Consequently, with the advent of high water prevailing in the Ottawa River and its tributaries next spring, the likelihood is that these logs will come down, and if they do in sufficient quantities, perhaps there will be enough to ensure production on a normal scale. However, this is problematical, and if certain buyers of the trade could correctly dope out what is going to happen between now and next June, it's safe there would be a lot of buying. The uncertainty as to the outcome of this year's bush operations naturally set everyone guessing.

From an employer's end the labor situation was largely attributel to an increase in construction operations being carried on throughout the country. Several of the manufacturers openly stated there was this year an apparent reluctancy on the part of labor to go into the woods if other positions were available. On an average the camps of the Ottawa Valley lumbering companies are a little more than half filled in comparison with last year, and the prospect of new camps being put in and fully manned are slim.

The demand, such as it was, came principally from the United States and was mostly for the middle grades. A difference of opinion existed among shippers as to the car situation. Some maintained there were plenty of cars to carry the reduced shipments, while others inclined to the view that foreign cars were scarce.

One of the principal reasons outside of the labor situation for the decrease in orders, was the new increase in freight rates. It was referred to by several wholesale yards purchasing lumber out of Ottawa that they were not now ready to buy if the stock was shipped from very distant points.

Another and more optimistic view was entertained, that when the public became accustomed to the added increase in freight rates that purchases of lumber would be made as before. Little or no change was shown during the period in connection with the European export situation. The press notice that the Canadian Government had declined to guarantee delivery of shipments and enter into trade to and from Russia had not been fully digested by the trade up to September 24th.

Laurentide Has Big Pulpwood Reserve

George Chahoon, Jr., Grand'Mere, Que.

Shareholders of Laurentide Company, Limited, at the first annual meeting of the reconstructed enterprise held in the offices of the vice-president, C. R. Hosmer, Montreal, heard from the president, George Chahoon, Jr., an interesting outline of the policy being carried out by the prosperous pulp and paper concern in the way of extensions to both mill capacity and pulp land holdings and the changes in these respects effected in the year.

The two new paper-making machines, upon which construction work was begun some months ago, Mr. Chahoon stated, were now reaching the stage of complete installation, and it was anticipated that both would be in operation by the turn of the year. The output of newsprint would be increased by 150 tons daily, or approximately 50,000 tons per annum, he said, which additional supply was to be taken by the New York Times under a five-year contract favorable to the company.

The Laurentide president further stated that the company during the past year had acquired here and there small parcels of timber lands, the supply of wood from which would be sufficient to meet the demands of the Grand'Mere enterprise for the increased capacity of the next ten or twelve years, without touching the old limits. The policy of acquiring fresh limits, he said, had been pursued for some years past, so that at the present time, Laurentide has a greater supply of wood available than it had some ten or fifteen years ago.

Mr. Chahoon, in reply to Mr. Blackadar, one of the shareholders present at the meeting, stated that the company's water powers on the St. Maurice River had been more than doubled in potentiality, while the reforestation policy adopted some years ago was developing along satisfactory lines. Laurentide, he said, was the first paper company to study scientifically the replenishing of cut limits, and had gone further in this respect than any similar industrial on the continent.

Pulpwood and Its Varied Activities

(Continued from page 65)

At present the only pulp and paper mills in the island are at Grand Falls, in the interior, were the Anglo-Newfoundland Development Company some years ago established an extensive plant which supplies the Northcliffe papers in England with most of their material. Before the war capitalists were negotiating for other similar projects.

Now that the survivors of the Newfoundland regiment are at home again, and the supply of labor appears satisfactorily, the world-wide demand for paper has stimulated new efforts. Negotiations are under way looking toward exploiting large tracts of spruce on the south coast. The extensive timber holdings of the Reid-Newfoundland Company, obtained as part of their compensation from the Government for opening up a large part of the colony with a railway line, also are expected to be utilized for pulp-making in the near future. Still another project in contemplation is the establishment of paper and pulp mills, saw mills and veneer mills for the manufacture of birch into boxes and barrels, at St. Georges, on the west coast.

The company promoting the St. Georges' enterprise is composed of British and American capitalists, who control 1,500 square miles of timberland in that vicinity and 1,000 square miles bordering on Grand Lake, the largest body of water in the colony. The upper end of the lake has direct rail connection with St. Georges.

Whalen Company Elects New Directors

Sir George Bury officially severed his connection as president and managing director of the Whalen Pulp and Paper Company, Vancouver, recently, when the new board of directors was elected. It is expected that the new president and managing director will be elected in the near future at a meeting of the board held either in New York or in Eastern Canada.

The secretary-treasurer reported that construction work having been now completed the company's plants were now in a position to effectively handle the large and constantly increasing business offered. The following board of directors was elected:

Messrs. A. H. Douglas and Walter McLachlan, representing British shareholders· R. Higgins, of the Zellerbach Paper Company, San Francisco; James Whalen, Alexander Smith, Peabody Houghteling, Chicago; I. W. Killam, president Royal Securities Corporation; Prof. Lawrence Killam, University of British Columbia; T. W. McGarry, Toronto; F. F. Cole, New York; W. D. Ross, vice-president of the Nova Scotia Steel and Coal Company, and M. J. Haney, Toronto, the recently appointed director of the Riordon Pulp and Paper Company.

Death of Pioneer Pulp Man

John Ford, of Portneuf, Que., died recently. He followed the business of paper-making all his life and saw the first groundwood pulp made in Canada by the hydraulic process. Mr. Ford also built the first successful pulp mill in Canada at Glenford, Portneuf county, which was in operation until a few years ago. He was an engineer and inventor of marked ability, and many of his inventions are now in general use in pulp and paper mills throughout Canada. The passing of Mr. Ford marks the severance of another link which connects the present with the past.

Riordon Prospects are Very Bright

There is considerable talk heard in paper circles regarding the prospects of the Riordon Co. The earnings of this organization are constantly reaching new high records, and the present rate would seem to indicate as much as 12% on the new common stock. The new stock is being dealt with on the unlisted department at around 53 a share. The prediction is heard that it will be placed on a dividend basis this fall, but no intimation has been given respecting the probable amount of the dividend. The price of the company's product, which is principally bleached and easy bleaching sulphite pulp, is now at the very top, with orders ahead for a long period, and from all that can be seen, it is believed that pulp is not likely to experience any recession for some weeks to come.

Company Does Unique Advertising

The effectiveness of newspaper and poster advertising was demonstrated in many new ways during the war in getting recruits, floating Victory bonds, inaugurating public celebrations and enforcing military regulations. Many an industrial plant, which has been in need of labor, has occasionally placed a small want ad. or a 2" or 3" black-faced type announcement in the daily or weekly press, but it remained with the Fort William Paper Co., Limited, to undertake the thing on what might be called a colossal scale. This company is erecting a $3,000,000 pulp and paper plant on the Mission site of Fort William, and recently ran a half-page advertisement in the Port Arthur and Fort William papers, notifying laborers to come and help construct the mill. Highest wages were offered along with hot meals, free transportation to and from the works, and other inducements. The result of this appeal met with an immediately favorable response and will enable the company to have its pulp mill erected by January next, as intended.

Pulp Companies Pay High Woods Wages

A leading lumberman reports that men are scarce in several districts and are particularly restless. They are demanding the highest wages ever known and lumber operators in their logging activities are up against the competition of pulp and paper companies who are paying as high as $85.00 a month for woods labor. This they are able to do because newsprint is commanding an exceptionally high price and another advance goes into effect on the 1st of the month, when the product will bring from 5½c to 6c per lb. The market for this commodity is steady—in fact there is a decided shortage— and the mills must have pulpwood, no matter what the operating expenses are. The price obtained for the finished product justifies the means. The lumber situation, on the other hand, is uncertain. Demand has fallen off, buying is rather slow, building has halted, and just what the future holds in store no one can foretell.

Aggressive Head of Busy Concern

H. Biermans, Shawinigan Falls, Que.

Hubert Biermans, managing-director of the Belgo-Canadian Pulp & Paper Co., is widely known to the industry in Canada, and is at the head of one of the most progressive organizations in its line in Canada. The various units of the organization are located at Shawinigan Falls. The Belgo-Canadian groundwood pulp output is 165 tons a day, sulphite pulp 90 tons and newsprint 200 tons. Mr. Biermans was born in Holland in December, 1864, and, after leaving school, was an apprentice for one year in the machine shops of the Railway "Grand Central Belge" at Louvain, Belgium. Later he was assistant engineer in Corsica, Algiers and France of the Compagnie des Cheminsde-Fer-Departmentaux, for four years, and in 1890 was appointed engineer and later chief engineer of the Congo Railway, which position he ably filled for nine years. Mr. Biermans next went on a special mission to the Gold Coast, representing the Banque d' Outremer. This was followed by a tour of investigation of the Phillipines for the King of Belgium, where Mr. Biermans spent two years studying the advisability of building a railway from Santa Crux, Los Banos, to Manilla. Twenty years ago the subject of this reference came to Shawinigan Falls, where he has resided ever since, with the exception of a few months in each year which are spent in Brussels, Belgium, to which point he makes frequent business trips. There the head office of the organization is located.

Mr. Biermans is a kindly and thoughtful gentleman, who has won the esteem and confidence of all his associates. His recreations are golf and tennis and he belongs to a number of leading clubs in Montreal.

The Belgo-Canadian industry has been financed largely by leading capitalists overseas and is one of the industries in regard to which spectacular stock flotations or other sensational "fliers" have not been heard. It pursues the quiet, even tenor of its way. Extensive additions are being made to the plant. The new groundwood mill will provide for three grinder units, of which two will be installed at present. The grinder room extensions will be 59' wide and 108' in length, and, the addition to the boiler room, will have a span of 64' and length of 84' and the new transmission building a span of 26' and a length of 74'. The latter is located at the farther end of the new boiler house. The new grinders, which will be installed, are of the magazine type, two to a unit, and each grinder will have an approximate capacity of 20 tons.

One of the sawmill plants of the Belgo-Canadian Co. is located in Three Rivers, and the other at Shawinigan Falls. The annual cut is about 15,000,000 feet of lumber, besides lath, shingles, boxboards, etc. The lumber department is under the capable direction of H. E. Howe and has had a busy season.

Immense Pulpwood Cut in the North

Attractive Prices Induce Many Settters and Operators to Get Busy—Much Poplar Being Offered

E. R. Heyland, of the Thompson & Heyland Lumber Co., Toronto, who carry on an extensive business in pulpwood and ship large quantities to the Thorold district, as well as Pennsylvania, states that there will be a bigger cut of pulpwood throughout Northern Ontario this year than ever; in fact more wood is being taken out now than is usual at this season, and as the fall months roll round, more settlers and farmers will be getting into the game.

Mr. Heyland reports that more offerings of wood are coming to hand than in any previous year. Owing to the prevailing high quotations and the fact that the future of lumber prices and demand is somewhat uncertain, many residents of Northern Ontario and Eastern Quebec are directing their operations in taking off pulpwood. It is the most profitable way to dispose of their smaller logs.

South of North Bay rough spruce and balsam is selling at $13.50 to $14.00 per cord, f.o.b. shipping point, and peeled spruce and balsam from $21.00 to $22.00 per cord. Peeled poplar is bringing $12.50 to $14.00 and peeled hemlock $15.00. Very little rough hemlock or poplar is bought. The product is practically all peeled. These figures may vary some according to the freight rates from different points but are a fair average price of what wood is commanding south of North Bay.

North of that point, say at Englehart, rough spruce and balsam is sold at $12.50 and peeled spruce and balsam $20.00 per cord, while peeled poplar is disposed of at $11.50. There is much more poplar wood being offered than there is a market for at the present time.

The car situation has greatly improved in the northern part of the province during the past few weeks, and shipments are more prompt. As conditions are at present, many of the mills hesitate to go into the northern part of Ontario for wood, owing to the fact that it must be paid for when it is stacked up at the point of shipment. If there are no cars to take it out, it means a tying-up of the investment for a considerable period. It is declared that if pulpwood could be loaded on the cars as it is produced and shipped immediately it would mean a difference of $1.25 per cord in charges, apart altogether from the shrinkage.

Poplar Wood for Soda Pulp

It is understood that the Howard Smith Paper Mills are establishing a 50-ton soda pulp plant at Cornwall, where soda pulp will be made from poplar wood. Mr. Smith was interviewed recently in regard to the development and expansion of the use of poplar in the manufacture of pulp and utilizing even greater quantities of this wood which the north country in certain districts is generously endowed. Mr. Smith states that soda pulp is a new article in Canada, although it has been made for a great many years in other countries, and poplar is the wood employed; in fact, it is the only kind that gives satisfaction. Soda pulp is used very largely in the manufacture of book papers and the Howard Smith Paper Mills have been importing large quantities of this pulp for some time. "The chief difficulty," declared Mr. Smith, "is in obtaining supplies of raw material." He has been very much interested in searching poplar limits to obtain this wood. It, apparently, grows in stands in different parts of the country, and is strictly a "rail" proposition as the wood will not boat. The new soda pulp plant will be located at Cornwall and wood will be brought to that point from the north section of Ontario both by boat and rail.

Mr. Smith states that poplar grows much quicker than spruce and the company has to get some to start with as they cannot wait for the wood to grow in any limits they might purchase or any reforestation scheme they might adopt.

Speaking of poplar, a recent despatch from Ottawa says that this wood bids fair to take on a new value in Ontario, Quebec and New Brunswick. Recent applications have been received by the Government of Quebec for permission to export poplar logs to the United States but these have been turned down on the ground that no logs can be exported from Crown Lands under the Quebec law in unmanufactured form. It was generally thought that as poplar has been a "weed tree" no objections would be raised to its cutting and sale anywhere in log form. The provincial Government takes the view that as spruce and balsam were only a few years ago regarded as "weed trees," poplar is certain to come into its own for soda process paper making and for other purposes. Recently a five million dollar British match concern located in Quebec and will use poplar for match splints exclusively.

A quotation from the market report published in Chicago on July 8th, 1858, shows the following prices: best butter, 10 cents a pound; eggs, 4 cents a dozen; chickens 12 cents each.

Pioneer in the Pulpwood Business

D. H. Pennington, Quebec, P. Q.

David Henry Pennington, of Quebec, was among the first residents of the eastern province to export pulpwood to the United States and was also one of the promoters of the Wayagamack Pulp & Paper Co., of Three Rivers. For many years he has been prominently identified with the lumber and pulpwood interests, and is president of a number of industrial companies in various lines, which are being successfully operated. He is a native of the Ancient Capital where he was born in 1868. His father was also engaged in the lumber line, being with the G. B. Hall Lumber Co. and living at Montmorency Falls. The subject of this reference entered the offices of the Hall Lumber Co. as a junior clerk, and, by industry and perseverance, worked himself up to be general manager of the company's branch of operations in the Eastern Townships, eventually buying out the interests of the company in the townships. At Lyster he established two sawmills, the large dressing plant and a pulpwood storing station. His enterprises were soon felt in the community, and Lyster became an important business outlet on the Grand Trunk Railway route between Quebec and Richmond for the counties of Lotbiniere and Megantic.

Mr. Pennington resided at Lyster for twelve years and was Mayor of that municipality for a long time as well as warden of Megantic County. In 1908 he was elected to represent the county in the Quebec legislature, where he served for a number of years. He is also a former member of the Quebec Harbor Commission, resigning June last. Mr. Pennington had large timber limits on and near the river St. Lawrence and is now largely interested in pulpwood.

Higher Prices for Railway Ties

The time for taking out ties starts early next month, so far as the general operator is concerned. The prospects are bright for an unusually large production of both softwood and hardwood ties during the coming winter. Prices have advanced somewhat and show an increase of about 15% over last year.

A leading Ontario purchaser of ties stated recently that, owing to the somewhat doubtful outlook of the general building situation and the lumber market for the coming year, which was causing various logging firms to decrease production, many small operators were turning their attention to ties. The requirements of the railways were about normal and the advance in the prevailing price of ties of 15% will, no doubt, prove an incentive to increased activity in this direction in various parts of the country.

Some Corrections on Measurements

In the interesting article, "Some Reminiscences of Swedish Lumbering," by Anton Selander, F.E., Montreal, which appeared in the September 1st issue of the "Canada Lumberman," it was stated that trees in Sweden were generally cut three feet from the ground. This should have read "three inches." It was also stated that the width between the runners on the timber sleighs is three feet, whereas it is generally two feet. The logs for charcoal are two feet long and not 10 feet. In a letter to the "Canada Lumberman," Mr. Selander says "the errors were made in my office, so that you are in no way to blame, but I hope you will be kind enough to make the necessary corrections, and greatly oblige."

New Company Procures Charter

A charter has been granted the Northern Pulpwoods and Transport Co., Limited, with a capital stock of $500,000 and head office in Toronto, to carry on the business of manufacturing and dealing in lumber, pulpwood, pulp, paper and other forest products.

According to press reports, two quarts of whiskey were destroyed when a house burned down in a southern city recently, and the paper says that the total loss was $2,000. Wasn't the house worth anything?

EDGINGS

Ontario

Dey Bros., Ottawa, Ont., boat builders, recently suffered a loss by fire.

Five buildings were wiped out in a fire which broke out in Dan Strong's planing mill on the Mattagami townsite across the line from Timmins.

Arnold Green, of Green Bros., Toronto, interior woodworkers, recently passed away. Mr. Green was fatally injured in an automobile accident.

The James T. Gilchrist Lumber Co., 496 Gladstone Avenue., Toronto, is making extensive improvements and additions to its buildings which greatly improve the appearance of the premises.

The planing mill, carriage factory and blacksmith shop of W. G. Greenwood, Sault Ste. Marie, Ont., was completely wrecked by a gas explosion. The loss exceeds $7,000, with no insurance.

The Milverton Furniture Co., Limited, Milverton, Ont., were recently incorporated to manufacture and deal in furniture of all kinds, capital $200,000. The provisional directors are John Boshart, Enos Nafziger, Norman Honerich, Alvin Clemens and John Grosch.

The work of reforestation has started in Ontario. Simcoe County has secured 800 acres of land in Vespra township, which has been purchased at an average of about $6.00 per acre. This land is not suitable for agriculture and the county will start the work of reforesting.

The Pigeon River Lumber Co. will erect a large pulp and paper mill at Port Arthur if pulp limits can be secured. A deputation from Port Arthur consisting of Mayor Matthews and other representative citizens recently interviewed the Ontario Government in this connection.

Fred Dane, Commissioner of Settlers' Loans in the Lands and Forests Department, has moved his office from the Parliament Buildings to the Government building at 46 Richmond Street West, Toronto. The office at Queen's Park will be occupied by E. J. Zavitz, who is to be new Superintendent of Woods and Forests.

The Rice Lake Canoe Co., who for many years have operated at Gore's Landing, Ont., have obtained a site and will erect a new factory in Cobourg, Ont. The new plant will be located near the new furniture factory of the Langslow Fowler Co. Favorable shipping advantages, both by boat and rail, make the new location an advantageous one.

The sawmill owned by Adam Schaver, in Keppel Township, was burned recently. The greater part of the lumber piled in the yard was also consumed. Mr. Schaver had been cutting shingles in the afternoon and had quite a fire on under the boiler, and it is thought the blaze originated from a spark from the smoke stack. The mill will be rebuilt.

A charter has been granted the Pembroke Timber, Tie & Pulp Co., Limited, with headquarters in Pembroke and a capital stock of $40,000, to carry on the business of lumbering in all its branches, and to manufacture and deal in timber, lumber and pulpwood. Among the incorporators are James S. Fraser, L. M. Chapman, A. J. Miller and F. P. Shepherd, of Pembroke.

Arrangements are being made between the Canadian Air Board and the Commission of Conservation, for Ontario, the Department of Agriculture and the Chief Forester for New Brunswick to use airplanes and flying boats extensively next summer in the establishing and carrying out of forest fire patrols and the conveying of entomologists to ordinarily inaccessible places in search of spruce bud worms, etc.

The Nipigon Fibre & Paper Mills, Limited, have awarded a contract for erecting their new pulp plant at Nipigon to the Thunder Bay Harbor & Improvement Co. The initial output will be 50 tons a day, and it is expected the industry will be in operaton early next year. Construction work is now under way and good progress is being made. The mill is located one mile west of Nipigon, in the Thunder Bay District on the Canadian National Railway.

The Ontario Cabinet went all through the argument regarding the Backus interest application for the English River pulp limits and no decision has yet been reached. Premier Drury said the Government was waiting to consult Sir Adam Beck regarding the water powers. Mr. Backus, Peter Heenan, M.P.P., and others were present with the Government. Mr. Backus said that the Government had not yet made known its decision. He would not say whether he thought his chances of getting the limits good or otherwise.

A charter has been granted the Kratz & Hall Lumber Co., Limited, with headquarters in Vineland, Lincoln County, to carry on a business of timber merchants, sawmill and shingle manufacturers and pulpmill owners, loggers, lumbermen, etc. Among the incorporators are John H. Kratz, Louth Township, and Joseph H. Hall, Waterloo. The new organization is empowered to take over, as a going concern, the timber limits, mill, supplies, and other assets of the business now carried on at Craighurst, Simcoe County, by J. H. Kratz & Co.

Eastern Canada

The Bolton Last Plant of George Willard & Son, Mansonville, P.Q., was destroyed by fire.

The plant and stock of the Edward Sinclair Lumber Co., Newcastle, N.B., were recently damaged by fire.

Cyrus MacRae, John W. Robinson and Alcide Brisson, of Clifton, P.Q., were recently registered as the East Clifton Pulp & Lumber Co.

Wholesale Lumber Co., Limited, Sherbrooke, Que., was recently granted a federal charter to conduct a general lumber business in all its branches. Capital $10,500. E. M. McDougall and G. S. Stains, both of Montreal, are two of the incorporators.

The Lake St. John Pulp & Paper Co., Limited, Montreal, P.Q., have just been granted a federal charter with a capital stock of $4,000,000 and headquarters in Montreal. It is understood that they will erect large pulp and paper mills in the Lake St. John district.

Already some two hundred applications have been received for loans out of the $1,000,000 allocated to Montreal for the new housing scheme. It is said by Alphonse Verville, the surviving member of the Housing Commission, the remaining members of which handed in their resignations, that there is

considerable confusion amongst citizens as to where they should apply for loans under this housing plan, and he is dealing with enquiries of many kinds, asking for information as to who is entitled to apply, the amounts obtainable, terms of payment, how repayable, interest due, and so on.

The Jost Pulpwood Company of Campbellton, Limited, Campbellton, N.B., was recently granted a federal charter to manufacture and generally deal in lumber, timber and pulpwood products. Capital $75,000. P. M. Jost and A. E. Wever, merchants, both of Westmount, Que., are two of the incorporators.

The Compagnie Forestiere, Limitee, Chicoutimi, Que.. have been authorized by supplementary letters patent to change their name from "La Compagnie Jolbert Incorporee." The new company will conduct a general lumber business manufacturing and dealing in lumber, timber and other forest products, with a capital of $50,000.

Speaking of lumber conditions in Prince Edward Island, a recent issue of the "Charlottetown Guardian" says that many of the fir trees have gone to waste in that province during the last four or five years on account of a disease which caused them to decay. Thousands of dollars have been lost by the owners neglecting to use or sell the trees before they went bad altogether and most of them are now of little use.

It is understood that the Hammermill Paper Co. of Erie, Pa., who recently acquired the timber lands, mill site and river improvements of the Matane Lumber & Development Railway, owned by O'Brien and Doheny, will have their headquarters in Quebec and that they will start at once fall and winter operations in the logging line. The timberlands acquired are on the Rivers Matane and Cap Chat on the south shore of the St. Lawrence and comprise an area of 133,000 acres. L. G. Belley, K.C., of Quebec, directed the purchase of the O'Brien and Doheny interests.

Members of the lumber industry generally, and particularly of the National Hardwood Lumber Association, of which he is one of the distinguished ex-presidents, will learn with gratification of the nomination of John M. Woods, of East Cambridge, Mass., as a candidate for representative to the State Legislature from his district. This nomination means the election of Col. Woods, and the certainty that that district will be represented in the coming legislature by a big, brainy, business man. Col. Woods is well known in Canada and was one of the speakers at the annual convention of the Canadian Lumbermen's Association held in February last in Quebec city. He is familiarly known in hardwood industry as "Uncle John" and is very popular.

Western Canada

The sawmill of M. Foucher, Arborfield, Sask., was recently damaged by fire.

The shingle mill of Smith & Hutton, Cloverdale, B.C., was destroyed by fire.

The Antony Lumber Co., Limited, Aleza Lake, Alta., were recently incorporated.

The Capilano Timber Co., Limited, North Vancouver, B.C., recently suffered a loss by fire.

Fire recently damaged the plant of the Barclay Shingle Mills, Limited, Vancouver, B.C.

The exports from British Columbia during the first six months of 1920 amounted to 29,000,000 feet of lumber.

The plant of the Dominion Cedar & Shingle Co., Limited, New Westminster, B.C., was recently damaged by fire.

A charter has been granted to the Kootenay Pulp & Paper Co., Limited, with headquarters at Nelson, B.C. The authorized capital is $500,000.

J. D. Patterson and S. A. Werry, of Vancouver, are principals of the Napier Lumber Co., which is building a mill of 20,000 feet capacity on Vancouver Island, near Duncan.

The sawmill, planing mill, shingle mill and lath plant of Brooks, Bidlake & Whittall Co., Powell River, B.C., was damaged to the extent of $115,000 by fire. The loss is fully covered by insurance.

Forest fires recently threatened the Norway House, the headquarters of the Hudson Bay Co., fir traders in northern Manitoba. The flames were fought off successfully for over a week and were finally conquered.

The James Logging Co. at Steelhead, B.C., are laying down three new spurs of railway to various parts of their limits, and are shipping large numbers of logs to the river. The company already have 22 miles of steel down, and are constantly extending other operations.

British Columbia is free of forest fires and no more outbreaks are expected, according to a report of the Forest Branch of the Department of Lands. There were no less than 981 distinct fires this year and to fight and extinguish them it has cost the province $182,408.

The eleventh session of the Pacific Coast Logging Congress will be held at Vancouver, October 6, 7, 8 and 9. The local entertainment committee at Vancouver is making preparations to royally entertain the visitors. The committee expects that it will have an unusually large attendance at the Logging Congress this fall.

The Canadian Western Door Co., which was recently organized with a capitalization of a quarter of a million, is planning the construction of a $135,000 sash and door factory at Mission, B.C. The plant will be one of a most modern character with a daily capacity of 1,000 doors or 600 doors and 500 window sash, which will mean a carload of material produced every day. The plant when completed will employ about 75 hands.

The Beaver River Lumber Co., W. J. Walker, Vancouver, foreman, are now running at full capacity one side of their new logging camp at Clayburn, B.C. The camp is a portable one, each building being 40 x 12, so that they can be placed on box cars and moved when their logging operations in this particular locality are completed. Everything about the camp is modern in every respect. R. E. Johnson, representative of the Taylor Forbes Co., took the measurements recently for a hot air furnace to be installed in the rooms and in the drying room. The sleeping apartments are supplied with steel beds, blankets, pillows, sheets, and reading tables. There are also six shower baths in connection with the sleeping quarters.

Install a "By-Pass" Exhauster

in your Saw Mill, Planing Mill or Plant

Our "By-Pass" Exhaust systems save your power and give better service. They handle green sawdust or wet, stringy material that usually clogs up an ordinary Blower system. The fan wheel is not overhung. No heating, clogging, or shaking. Three bearings.

Write for information.

We manufacture and install systems complete.

Stop the Leaks That Steal Your Profits

These are many expensive leaks in your plant that you know nothing about.

Loss of power through slippage on pulleys — spoiled materials — idle machines—employees paid for time while repairs are being made—wrong placing of belts—each one costs you money in power waste and lost production. They take more out of your profits than **our better belts** would cost.

Dominion Friction Surface Belting

will eliminate most transmission troubles, for it is more than just a belt—it is service built into a product.

Our engineers are ready to demonstrate to you, without charge, that Dominion Friction Surface Belting will lower your manufacturing costs.

Phone, wire, or write our nearest service branch.

They Don't Vary

ONCE you get just the Aloxite Saw Gumming Wheels that meet your filing conditions—right grit, right grade, shape and size—you can always get them—

For Aloxite Saw Gumming Wheels don't vary.

This ability to duplicate wheels has won the confidence of filers the country over.

They know that they can keep right on always getting the same fast, clean, cool cutting wheels that turn out better conditioned saws—quicker.

There is nothing more convincing than a trial wheel

Let us know your requirements; we will submit the proper design to you.

RAYMOND LOG LOADER COMPANY
ESCANABA, MICHIGAN

The Position of the Motor

1s one of the important features on the No. 135 Motor-driven Swing Saw as it is so placed as to assist the operator in pulling through the stock. This is the simplest and most efficient swing saw ever devised. Adjustable Headstock, saw guard that fully protects the operator and sturdy construction make it the logical swing saw to purchase.

FIRE BRICK

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel," "St. Marys," "Keystone" and "Rotex"

Prescott's Valve Controller

Patented June 8, 1915

The Machine You Have Been Waiting for.

To eliminate every trouble with your Steam Feed Valves install one of these machines.

Six Real Reasons for Doing So:

1—Gives the sawyer the easiest kind of control of valve.

2—Hand lever stays put, making them safe against any jerk or kick of valve.

3—Gives the sawyer every confidence in handling valve.

4—Will prevent accidents—is easier on the nerves and carriage runs steadier.

5—Water flowing into valves from foaming boilers does not fret the sawyer.

6—This relief from all troubles of which sawyers have complained enables them to give closer attention to the logs they are cutting and a better inspection of the lumber they produce.

Read what one of the largest lumber companies on the north shore has to say about it.

We are sole Canadian manufacturers of these machines.

Pamphlets with full description and prices on application.

Let us quote you also on our new "Hamilton" Vertical Steam Feed Valves.

WHAT IS IT ?

PRESCOTT'S VALVE CONTROLLER

Waubaushene, Ont., Sept. 11, 1917.
Messrs. Wm. Hamilton Co.,
Peterborough, Ont.

Gentlemen:—

Replying to your inquiry re Prescott Valve Controller, which you sent us last spring to try out: I beg to say that we installed this machine early in April, just previous to starting the mills, selecting the most difficult valve we have to handle, the steam having to travel **through nearly three hundred lineal feet of** pipe to reach this valve, and noting the fact that the pipes are well covered, there is necessarily considerable condensation, and every sawyer knows the annoyance caused by water passing through the valves which violently jars or jerks the lever, sometimes wrenching it from the hand and thereby inflicting serious damage to the machinery of the mill. And now after nearly five months of daily use, I am pleased to tell you that this device has put up all that is claimed for it. There is **not the slightest jar or vibration to be felt,** no matter where the lever is held. It is very easily attached and does not interfere in any way with the free movement of the lever, and the Sawyer, Mr. George Botting, also our Foreman, Mr. W. A. Gill, both speak of your controller in the most glowing terms. I can, therefore, congratulate you on securing an article that will fill many a long felt want.

Yours truly,
(Signed) D. B. Anderson,
Chief Engineer,

The Standard Hoist for Loading and Skidding Logs
Made with either one Drum, or two Drums, as shown, and in seven sizes, from the little 10 horse power machine to the massive 50 horse power size.

POWER LOADING

Is the fastest and most economical method of loading logs as proven by the experience of thousands of camps.

USE EITHER STEAM OR GASOLINE AS YOU PREFER

One Ontario Lumberman is using 7 machines same as shown in the illustration. With each of these he can oad up to 2,000 logs per day. He uses the 20 H.P. and the 25 H.P. sizes. He uses these machines for only two months each year, but even at that he finds them a good paying investment.

The Gasoline machines will do the same work exactly as the steam, and are much lighter in weight, therefore easier to move around. Their price is also much less. They are made in the same 7 sizes as the steam power machines, from 10 horse power up to 50 horse power. The 10 H.P. size will load up to 1,000 logs per day.

Our booklet "Suggestions for the Lumberman" describes many methods of using these machines for both Loading and Skidding. If you have not a copy, write us, and one will be sent you free of charge.

GOODHUE BELTING

FACTORY TO YOUR MILL

To the saw mill and woodworking industries we offer an unusually good belting value in our "Acme Waterproof." This belting is specially made from the best hides to run in wet places where only the best quality belt can "make good." If you require any belting you should enquire into the merits of "Goodhue Belts," then you will buy a "Goodhue."
According to the conditions under which the belt has to run, we recommend "Extra," "Standard" or "Acme Waterproof"—each brand the best quality, but each made for a different service

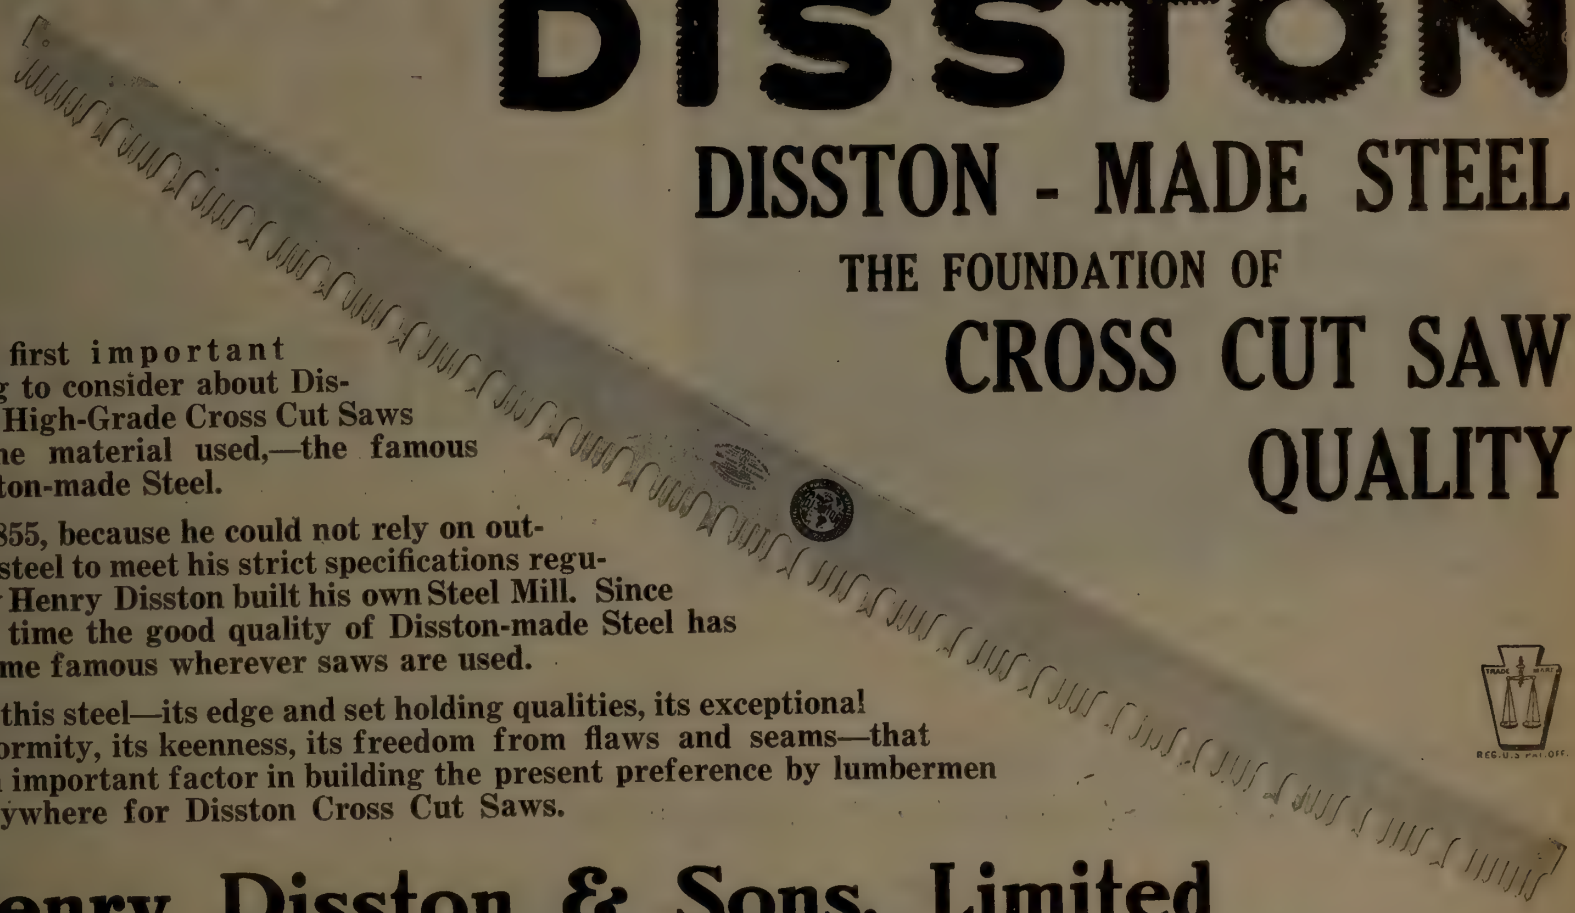
Ask about our Special No. 551 Farm Harness. It's a dandy.

DISSTON

DISSTON - MADE STEEL

THE FOUNDATION OF

CROSS CUT SAW QUALITY



The first important thing to consider about Disston High-Grade Cross Cut Saws is the material used,—the famous Disston-made Steel.

In 1855, because he could not rely on outside steel to meet his strict specifications regularly Henry Disston built his own Steel Mill. Since that time the good quality of Disston-made Steel has become famous wherever saws are used.

It is this steel—its edge and set holding qualities, its exceptional uniformity, its keenness, its freedom from flaws and seams—that is an important factor in building the present preference by lumbermen everywhere for Disston Cross Cut Saws.

Henry Disston & Sons, Limited
Toronto, Canada — — Branch : Vancouver, B.C.

LOG LOADING

Use your motor truck for this work by installing a BAY CITY WINCH.

You can load your truck or a trailer without other power than the truck engine. It saves time, money, men and labor.

The Moreau Barker

What it does—

How it does it

If we would emphasize two features of the Moreau Barker which have insured it's success, they would be: it's economy—and the smoothness with which it works.

Only ten horse power is required to operate it.

Guaranteed daily capacity of 30 cords.

It handles logs from 3 in. to 50 in. in diameter, while the tension spring which controls the wheels over all irregularities, accounts for the smoothness with which the operation is performed.

You cannot do better than to employ the Moreau Barker. Let us send you full details.

Goodyear Klingtite Belts saving power in the flour mills of Korea

World-Wide Acceptance of Goodyear Belts

THERE is a world-wide acceptance of the Goodyear Belting which dominates in Canadian industry.

This direct endorsement of the Goodyear principles of manufacture and application gives us no little pride. It means that the technical men of the world see eye to eye with Canadians in the matter of economical and satisfactory power transmission.

But it means much more to Canadian industry. It means a world-wide fund of data for the Goodyear men who advise with you on belting problems. It means that the cotton spinners of Lancashire, the silk manufacturers of Lyons, the steel plants of Sweden, the shipyards of Seattle, the flour mills of the far East—all will contribute their experience to help solve power problems in Canada.

In order to meet world-wide market conditions it has been necessary to change some of the familiar Goodyear brand names—but the change is in name only.

For example, Goodyear Extra Power Belt is now Goodyear Klingtite Belt, and when the Goodyear belting man specifies Goodyear Klingtite for a certain drive you are getting the old Extra Power in every particular.

Ask any Goodyear branch to send a man who is making transmission problems his special study. No obligation. Phone, wire or write.

The Goodyear Tire & Rubber Co. of Canada, Limited

ATKINS STERLING QUALITY SAWS

Tempering

In the Atkins factory the tempering of *Sterling Quality Saws* is not done by craftsmen who pose as "wizards."

It is done by experts who work on information supplied by the laboratory and the latest devices for making accurate physical tests.

For this reason you will find *Atkins Sterling Quality Saws* uniformly tough, hence they will cut and do good work for a longer time without refitting than any other saws made.

Ask for our catalog and learn more about our products

Sturtevant
PUTS AIR TO WORK

Dust and Shavings Increase Fire Risk

PLANING MILL people are well aware of the constant and real menace of the dust explosion, which frequently results in the complete destruction of the mill, and in great loss of life.

Adequate protection against this hazard can be secured only by a successful dust-collecting system.

For efficient operation the best arrangement is an installation of

Sturtevant
(TRADE MARK)
Planing Mill Exhausters

The powerful suction created by these exhausters, draws the dust and shavings right from the very edge of the cutting tool, and bears it away with lightning speed to the boiler room, or some other outside point.

A Sturtevant Planing Mill System keeps the work nice and clean at all times — it allows no refuse to gather and form a fire risk — and prevents all litter which might work into the machines.

Write for Special Bulletin No. 261-C which explains the benefits of Sturtevant Planing Mill Systems now used in many Canadian Mills.

B. F. Sturtevant Company of Canada, Limited

The Algoma Range

A Steel Range for Camp use. Built especially for this purpose. It possesses features that are attractive in usefulness but not in beauty. A blunt, hardy Range with a wonderful record for Service.

The Algoma is built in three sizes—each one has the three necessities,—

(1) An Oven of ample capacity;
(2) A cooking surface, open and capacious;
(3) A Firebox, big yet economical.

The Body and Oven are made of Steel that will last. Each piece of steel is solidly rivetted to the other. Great care is exercised to ensure the complete rigidity of the entire construction.

The cooking surface is cast-iron, solid and thick; therefore the heat barely affects it. There are a variety of sections.

The Firebox is lined with weighty pieces of cast-iron. Strenuous usage may wear these linings away—when this happens, replacement is easy and the Firebox is made as good as new.

The Gates are the duplex pattern—two bars, each heavy and perfectly made. Simply operated with one shaker bar.

The Camp Comfort

A heater that radiates direct heat from the body when burning wod. Simple, effective and efficient. The body is filled with wood and paper the light applied and the heater is operating.

The Lumberman's comfort in cold days and nights. Heat radiates in all directions from the round steel body. In the coolest weather the atmosphere around the Heater is comfortably warm.

The "Camp Comfort" is built of well tested materials that can withstand rough usage. The two ends are heavy cast-iron and the door is so large that huge chunks of wood can be fed to the Heater with ease.

The body sits on four cast-iron legs which fit into rigid cleats. Side or top shelves are supplied and are very convenient for temporary use in keeping foodstuffs and liquids at a high temperature.

The "Camp Comfort" is a Camp Heater. It is simply made. It produces the required results—See it.

McCLARY'S ability to make "Good Stoves and Cooking Utensils" is recognized by all users. Seventy-three years solid experience in the manufacture of Stoves gives us the machinery and skilled man power to produce highly specialized articles. These two Stoves are good samples of our best Foundry productions.

The "Algoma" Range *The "Camp Comfort"*

LINK-BELT
Saw Mill Chain

FOR elevating and conveying purposes, for medium and high-speed power transmission, for work of a crude nature, and for work requiring the highest possible efficiency and greatest accuracy, we are prepared to furnish types of Chain of such construction and possessing such qualities as make them the most desirable for the service expected of them.

By reason of the long-continued maintenance of such high standards of excellence, insured by rigid tests and careful inspection given to every foot of Chain by a skilled chain-making organization; and our large available stocks; we have developed our line of saw mill chains to a high standard of quality. We solicit your business on the basis of quality and service.

Look for this trade >——< mark on each link. It identifies the genuine Link-Belt—every link of which is guaranteed.

Write for our Saw Mill Chain Catalog No. 260.

Keeps The Mill Wheels Turning

D. K. McLaren Genuine Oak Tanned Leather Belting possesses that quality that holds out under all the adverse conditions found in the average lumber mill.

The practical value of McLaren's belting is recognized by many mill-owners who have found it meeting all the severe tests, where strength, unvarying service and dependability are essential.

The D. K. McLaren Trade Mark appears on all our goods.

The Carriage You Are Looking For
Our No. 1 Size

CARRIAGE—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1¾ in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

Large stocks available for immediate shipment

Rubber Goods FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P.M.S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

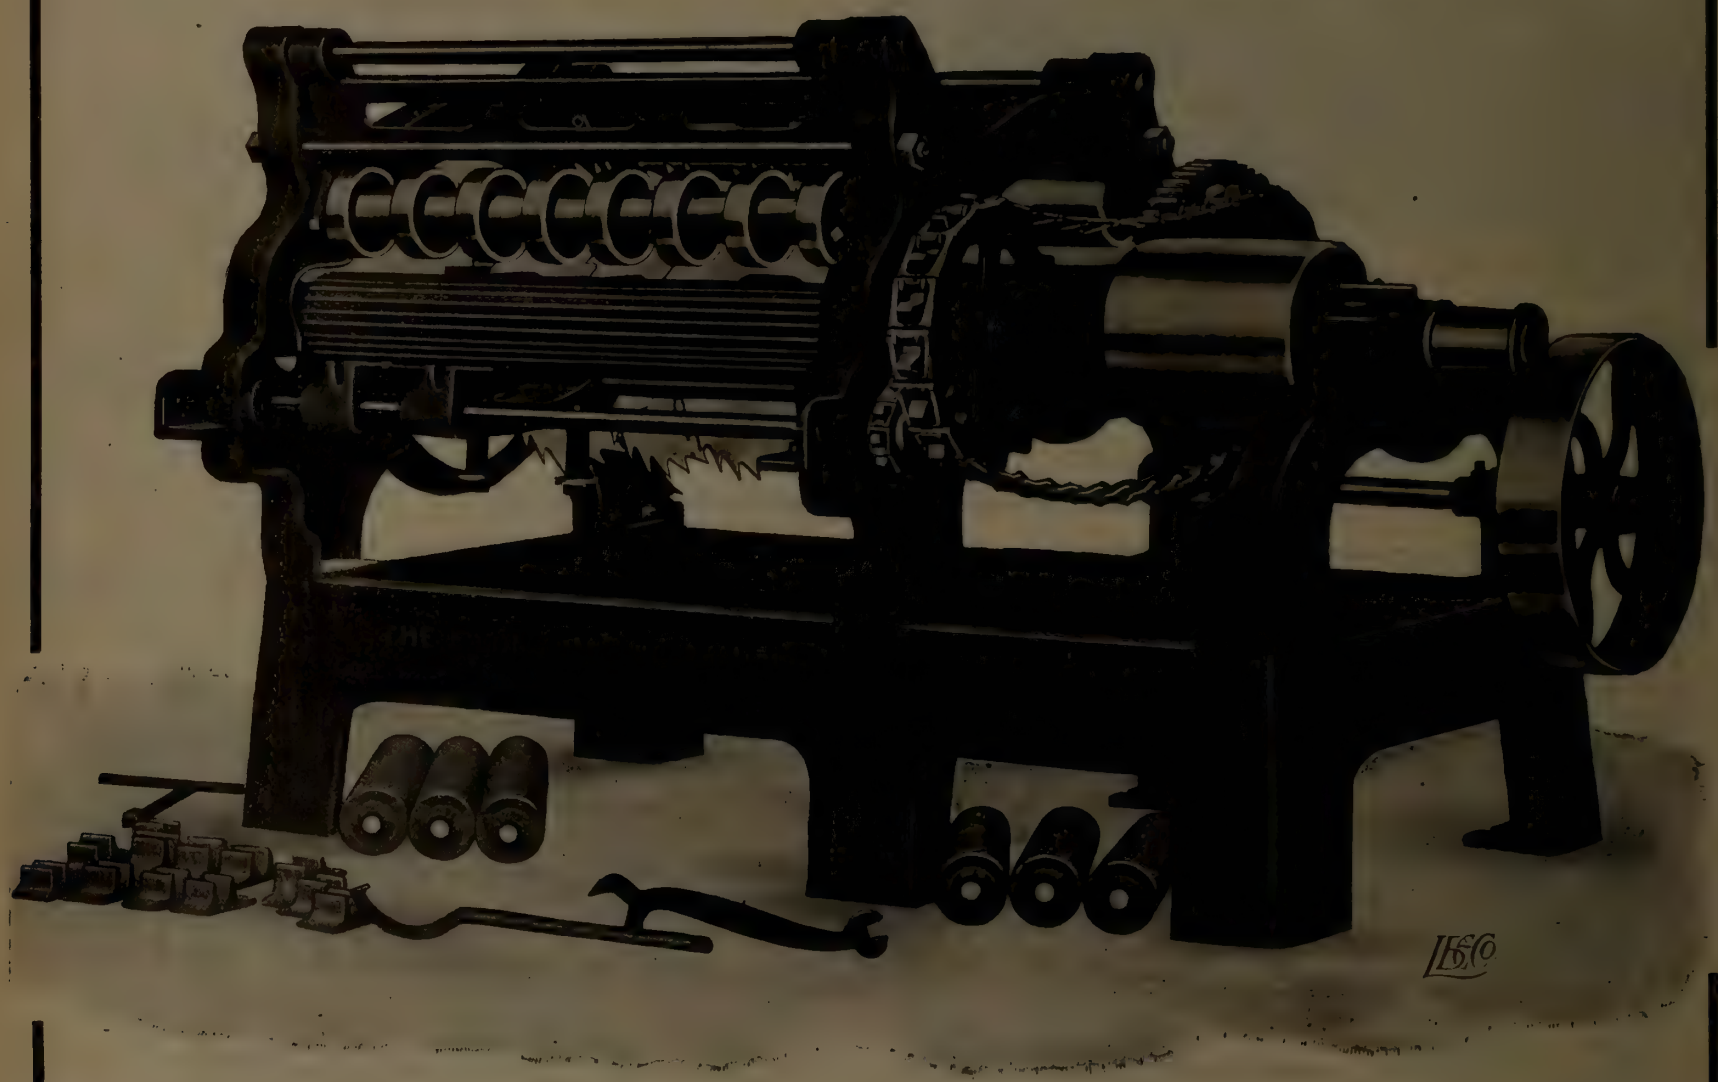
LUMBERMEN'S EQUIPMENT

THE E. LONG MANUFACTURING CO. SAW MILL MACHINERY ORILLIA CANADA

Saves It's Cost



The Standard Edger shown here will pay for itself in the saving of material.

It is a sturdy machine, powerfully constructed to meet the heavy demands required of it. The side frames are extremely heavy to insure the machine being kept rigid while it also gives perfect alignment to the arbor.

The rolls, saws, arbor, arbor bearings and saw shifting device are all thoroughly dependable and in every respect up to the "Long" standard of efficiency.

With this machine we supply a front table complete ready for operating with rolls, boxes, shifting levers, quadrant, wrenches, etc., also three rolls with boxes for rear table.

A card will bring our catalogue.

Waterous Kendall Nigger

The "WATEROUS KENDALL NIGGER" overcomes the greatest drawback experienced in the ordinary steam nigger—the chance of accident unless operated by an expert.

Where the carriage is of medium weight, unless in the hands of an experienced man, the danger of wrecking the carriage is especially great.

The "WATEROUS KENDALL NIGGER" is practically accident-proof. While it possesses both the speed and power of the ordinary Steam Nigger, it is so designed that a green operator can do quick and effective work without endangering the carriage in any way.

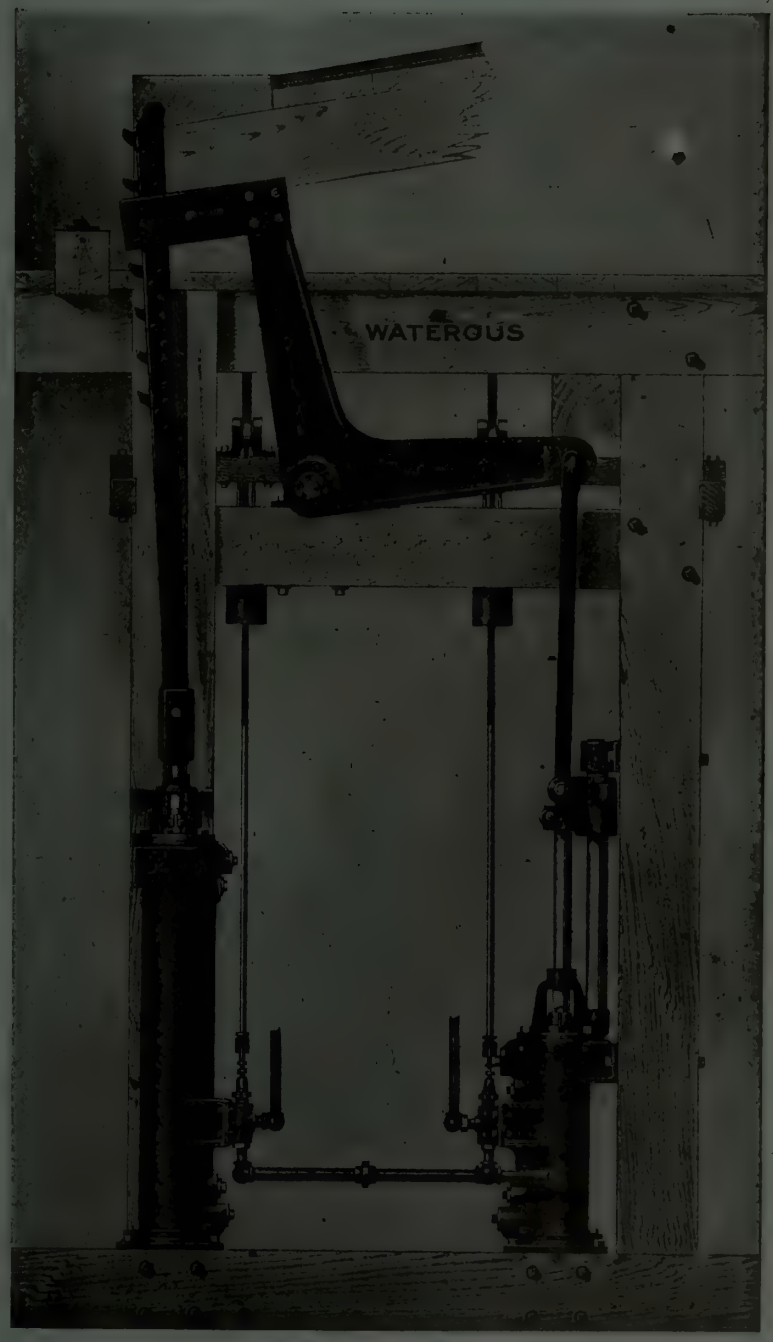
By attaching the Nigger Bar to one cylinder only, one motion of the operating lever turns the log and a quite distinct and separate motion is required to load it.

The stroke of the cylinder controlling the loading motion is made very short and thus further precludes the possibility of a serious mishap.

The Kendall Nigger is constructed to be powerful and rapid in action. The cylinders are 10 in. and 8 in. in diameter, pistons are steam cushioned at both ends of stroke, valves are adjustable to permit increase or decrease of operating speed without affecting the power in the machine.

Nigger Bar is of wrought iron, dogs are extra wide, top dog is winged, a steel roller is supplied. No floor plate is necessary. All lever and crank connections are made short and direct, so that the machine gives instant response to the movements of the sawyer's lever.

A great many of the Niggers are already in use in mills, where speed and accuracy on the log deck are essential, but where a medium weight carriage is operated. If your conditions are similar the WATEROUS KENDALL NIGGER will give unequalled satisfaction.



Ask for details and descriptive catalog No. 123

Waterous

BRANTFORD, ONTARIO, CANADA

Mill Owners

Whether you contemplate building new or repairing the old mill, it would pay you to investigate the merits of our Friction Feed Works which overcomes the trouble experienced with the ordinary friction.

While it possesses the speed and power of the steam feed, it can be operated by anyone without danger of accident.

We are now building this machine in two sizes and can supply you with a size that will meet your requirements.

When writing for particulars, state capacity of mill and weight of carriage.

THE MACLEAN MACHINE WORKS, Campbell's Bay, Que.

Not altogether what we say, but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

West & Peachey - Simcoe, Ont.

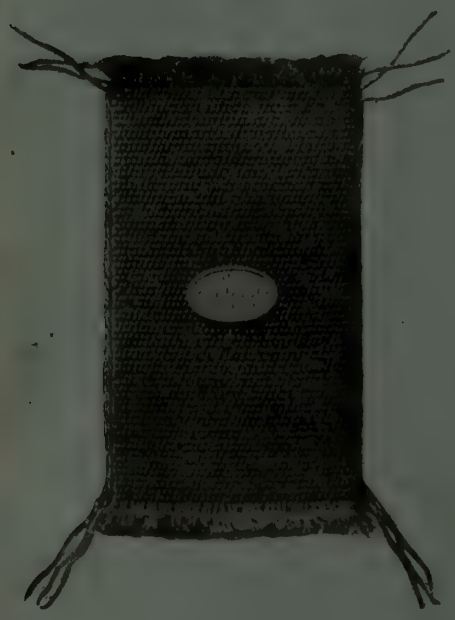
Reduce Your Belting Costs

"Gripoly" is British made by Lewis & Tyler, Ltd.



Eliminates Slipping -- Conserves Power

Inferior grades of belting cause the loss of many hundreds of dollars to mill owners, through frequent breakdowns.

"Grioply" has solved the problems of countless belting users the world over, whose high transmission costs were due to slipping, friction and general wear and tear.

"Gripoly" Belting is stretchless, waterproof and grips the pulleys in a way that eliminates destructive friction. The triple twisted edges are a feature of "Gripoly" Belting, enabling this Belting to withstand all action from guide forks, flange pulleys, etc.

Tell us your belting difficulties.

Bartram & Ball Limited

511 St. Catherine St. W. - Montreal, Que.

ANNOUNCEMENT

We have purchased the Davie Shipbuilding Company's Plant No. 4 at Levis, Quebec, for a remanufacturing plant.

Our main mill is 85 ft. x 500 ft. When installation is completed we will be able to resaw and dress 25 cars per day.

We are installing Yates Fast Feed machines and each machine will be driven by a separate motor.

Our plant is now shown in the Railway Tariffs as a stop off point for re-manufacturing in transit.

Our yard capacity will be about 15,000,000 ft. Our dry shed capacity will be about 1,000,000 ft.

We expect to start operating about the third week in September.

We will have in stock at our Levis yard by the last of September 5,000,000 ft. of dry merchantable spruce and 4,000,000 ft. of merchantable B. C. fir timbers.

We solicit your inquiries for rough or dressed spruce, rough or dressed fir or for milling in transit.

How to Reduce Costs of Building

Buy our "Utility" grades of Siding (made in Sitka Pine or Fir), and Flooring (Fir only). They effect a 20% saving. They satisfy the contractor because no extra labor cost is necessary and consumers appreciate the receipt of **maximum value for their dollar.** If you have not used "Utility" grades, write us —no others produce them.

MAHOGANY (250,000 feet all sizes and grades)

THIS WEEK'S SPECIALS

One mixed car containing

5000′ 1″ F.A.S. Figured Mahogany	2000′ 1½″ No. 1 Com. Chestnut
5000′ 1½″ No. 1 C&B Birch	3000′ 1/20″ Quarter Sawn White Oak
2000′ 1½″ F.A.S. Whitewood	5000′ 1/28″ Silced Figured Mahogany

We are not offering the above for sale. It is the contents of a mixed car we are shipping to a large Western Ontario firm of manufacturers from our Toronto yard and a demonstration of mixed car purchases we are advocating. The buyers in this case usually purchase each of the above items in car lots, had they done so in this instance the amount involved would be about $45000.00. The value of the above car is about $4000.00. These figures speak for themselves.

VENEERS Rotary Cut, Sawed and Sliced every description

THREE PLY FIR PANELS

All grades carried in Quarter Sawn White Oak, Gum, Poplar, Walnut, Canadian and Michigan Maple, Birch, Basswood, Elm, Ash, White Maple, Quartered Maple and White Basswood

Good Will

—a mighty valuable asset to your business and something that cannot be built up in a few days. It is the result of painstaking efforts to give the customer just a little more than he expects—keeping the quality of your products standard—and backing up every word of your advertisements. In short, it's Service—Real Service—that builds Good Will.

LONG-BELL WHITE PINE DOORS

Mt. Shasta, Calif.
photo by American Lumberman

An Announcement

The Long-Bell Lumber Company has added to its list of nationally known lumber products the famous California White Pine Doors, long and favorably known to the trade as "Weed Doors," produced in the plant of the Weed Lumber Company at Weed, California, in the shadow of Mt. Shasta. The Weed Lumber Company is a subsidiary organization of The Long-Bell Lumber Company whose lumber products from thirteen saw-mills bear this trade-marked brand:

LONG-BELL
THE MARK ON QUALITY
Lumber

White Pine for door and sash purposes has long been recognized as a superior material where outstanding quality is sought. It is especially suitable for veneer panel doors as it will not check, is readily adaptable to enamels, paints and stains and offers unusual resistance to time and weather.

The Weed plant is operated under the Long-Bell policy of **quality** and **service** and its products are distributed in every state in the Union.

The Long-Bell Lumber Company manufactures: California White Pine Doors, Veneers, Sash, Standardized Woodwork, California White Pine Lumber, Southern Pine Lumber and Timbers, Creosoted Lumber, Timbers, Posts, Poles, Ties, Piling, Wood Blocks; Oak Lumber, Oak Flooring, Gum.

Contented Men Stick

Simmons Bunks Ensure Their Rest and Comfort

A Simmons Double Deck Steel Bunk

The construction is boltless. The top and bottom frames are complete units, strongly riveted. The upper and lower frames lock securely in the posts and are reinforced by interlocking braces. The "Knock-down" Construction is much appreciated, as a complete bunk-house or bunk-car of Simmons equipment can be taken down, moved, or placed in storage on short notice.

The standard Steel Sleeping Equipment manufactured and supplied by Simmons Limited is fast supplanting old-fashioned unsanitary and uncomfortable wooden beds, because it is more efficient from every point of view. Simmons Bunks are **built for sleep** and therefore keep workers in good health and contented.

Simmons Bunks are built to stand hard usage. They cannot be injured or damaged, or used for fuel, intentionally or otherwise. They are 100% sanitary. Water will not injure them. Camps or cars in which they are used can be thoroughly scrubbed or fumigated without removing the bunks. As they give the same service season after season, expensive replacements are unknown.

Simmons Bunks are standard equipment in the Maintenance Cars of the C.P.R., the G.T.R., Canadian National Railway and Canadian Government Railways—and in the camps of such large organizations as Riordon Pulp & Paper Co., Shawinigan Engineering Co., Dominion Construction Co., F. H. Hopkins Co., Beattie & Morrow, etc., etc.

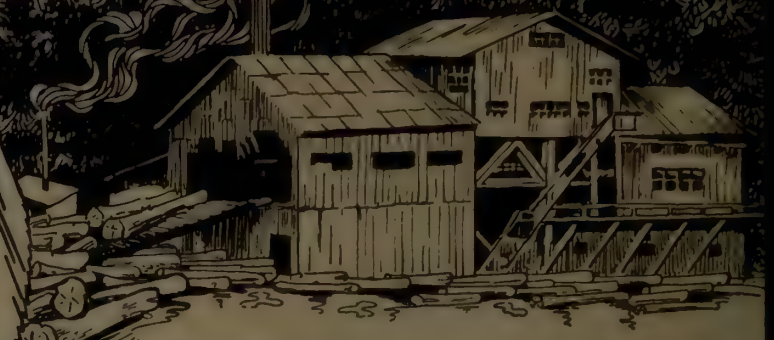
Simonds Band Saws



Founded 88 years ago, and conducted on the principle of producing only the highest grade of saws, the Simonds Manufacturing Company to-day maintains its supremacy in its field of endeavor. Simonds Solid Circular, Inserted Tooth Circular and Band Saws of all sizes, and for devious kinds of work are standard of quality and known throughout the world. Simonds Band Saws are of the toughest alloy steel, are strong and durable and hold their keen cutting edge longer. They stand heavy feed and cut smoother than other makes.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice, at Buffalo, N. Y., under the Act of Congress of March 3rd, 1879.

Vol 40 Toronto, October 15, 1920 No. 20

Watchman—What of the Future?

The old cry of "Watchman! What of the night?" has, by the trend of events and the logic of circumstances, been converted into the more immediate and pressing one of "Watchman! What of the future?" This question is being asked not only with respect to the aims and operation of labor, but also in relation to transportation, tariff revision, production and consumption and the rise and fall of various commodities. Much has been heard recently regarding "peak prices" being reached in all lines, both luxuries and necessities, and there has been a general disposition to curtail production and unload stocks. This has created a falling market in numerous commodities and temporarily dislodged things at a time when more stability is desired and a firmer grip and grasp of conditions was being looked for.

In these days, all prophecies are being upset and all theories shattered. It has been declared that high prices of lumber have had a deterrent effect upon building operations, although the relative increase in outlay for the wood used in the construction of a modern house is small when compared with expenditures for labor, and the ascensions in brick, plumbing, hardware, and other requisites. Still it is convenient and does not require much mental effort to lay charges at the door of the lumber manufacturer. It must not be forgotten that his costs have not decreased in any respect; his wage bill today is higher than ever; men have not improved in efficiency; overhead disbursements are advancing; distribution is becoming increasingly difficult, owing to the scarcity of cars, while augmented freight rates, business sales tax and other factors have all tended to bring about a state of affairs that in no way contribute to a steady, uniform volume of trade. Some, who bought stocks early last spring at a high figure, have not been able to hold them, and the industrial contraction, which set in a few weeks ago on the part of large consumers of hardwood, has resulted in some decrease in prices, particularly on imported stocks of white and red oak, gum, southern pine and other woods.

A falling market is practically of no benefit to any interest; it upsets the whole tenor of events and creates uncertainties that cause would-be purchasers, who really need material, to hold aloof, believing that, on the morrow they will be able to purchase more cheaply. When the morrow arrives they postpone action until the next day, and the next. This state continues, undermining ordinary business and resulting in small sales and isolated transactions.

On the other hand, a rising market, or one where values are firmly maintained, gives strength and stimulus to the industry generally. Considering that producing costs are very high and that the demand after the first of the year, both at home and abroad, is likely to be active, by reason of an aggressive building campaign, which can no longer be delayed, there is every likelihood of 1921 being a good, all-round year in the lumber line, with the ups and downs of prices largely eliminated, conditions more settled and the foundation on which industrial prosperity rests, more firmly established than at any period since 1914.

There are no pessimists in the lumber trade today. There may be a few "doubting Thomases," but the current of feeling and opinion indicates that matters will right themselves in the near future. Now that the ascending scale of quotations on every necessity of life seems to have been checked, industrial unrest should largely disappear, while the number, who are seeking work, will increase to such an extent as to make those already engaged, more anxious to hold on to what they have and produce. The output has for a number of years been far short of what ordinary manual labor turned out both individually and collectively in every line during ante-bellum days. The agitation of labor in the past has been a perturbing element, but, with a reversal of conditions, whereby the market becomes an employers' rather than that of employees', a more sane and progressive era should be ushered in.

With the abundant harvest of the past year, and the prospects of a revival of business abroad, there seems little to fear but that 1921 will be a satisfactory one in the history of Canadian lumber activities, unless all signs are amiss and the future contains some development not foreseen by those who have given the closest thought and most diligent study to our economic, social, productive and industrial problems and outlook.

"How Lumber is Graded," Department Circular No. 64, obtainable from Department of Agriculture, Washington, has been prepared by the Forestry Service. The publication states that grading has been one of the mysteries of the lumber business. Years of experience are required, it says, before one can become proficient in grading lumber even of a rather restricted range of species, and very often an expert in grading under one set of rules knows little of the rules used for other species and other parts of the country. The publication gives in a few pages the essentials of nearly all the grading rules now in use in the United States. It is pointed out that "the grading rules in general use at present, with very few exceptions, have to do only with defects and do not take into account the quality of the wood itself. That is, if two boards of the same species are clear or if they have similar defects, both boards are placed in the same grade regardless of the quality of the wood itself. As a matter of fact, the wood in one board may be dense, heavy, and strong and the wood in the other light and weak. For some purposes, such as siding, ceiling, or finish, it may not matter whether dense or light wood is used; but for other purposes, such as vehicle parts, structural timber, or flooring, where strength or hardness is a prime requisite, the wood must be dense to give saitsfactory service." The Forest Service has for some time advocated the adoption of the "density" rule for the grading of lumber in which strength is a requirement. Two of the largest lumber associations have adopted this rule. It "requires a proportion of one-third summer-wood (the hard, dark-colored part of the annual ring) in the cross section and at least six annual rings per inch, and disregards botanical distinctions in the southern pines."

Square or Thousand?—Dealers Discuss Issue

New Method of Packing and Selling Shingles Considered from Many Standpoints—What Representative Lumbermen Say For and Against New Unit

The adoption of the "square" as the packing and sales unit for red cedar shingles was announced some months ago by the Shingle Branch, West Coast Lumbermen's Association. The new method went into effect on April 1st, and it was stated that shingles would be packed so that each unit bundle would contain a quantity sufficient to cover 100 square feet, and the square would be the sales unit.

It was asserted at the time that the change in unit from the thousand to the square was made because a careful survey of the retail lumber yards had shown conclusively that such an alteration would be in the interest of better merchandising and would be a worth-while proposition. It was announced that the reasons for the change were that the square is a unit readily understood by all and the thousand unit is not; that the square unit simplified computations appreciably and the thousand unit complicated computation.

Other reasons given were: "The 'square' unit complies with all weights and measures statutes. The 'thousand' unit does not. The 'square' unit for shingles provides a just and direct basis for price comparison with other types of roofing. The 'thousand' unit does not.

"The price of shingles per 'square' is appreciably less than the price per 'thousand'—a very desirable thing from a merchandising standpoint.

"The price per 'square' furnishes a direct comparison of value of 16 inch and 18 inch shingles, not shown by the 'thousand' unit."

Irregularities of Roof Surfaces

Leaflets were also sent out some months ago, emphasizing certain other features, among them being:

"To the retail dealer the 'square' unit means that, if you are or have been selling shingles by the thousand at $10.00 you can sell a 'square' of shingles for $8.80, and make precisely the same profit.

"The standard 'square' unit for 16 inch shingles guarantees a lineage of 3,256 inches. The standard 'square' unit for 18 inch shingles guarantees a lineage of 2,664 inches. If the pitch of the roof is so unusually steep that the shingles can advantageously be laid an additional half-inch to the weather, all the dealer or contractor need do in estimating volume required, is to figure number of squares in roof, then deduct 10 per cent.

"Every contractor or carpenter knows that irregularities of roof surface cause a certain amount of waste of roofing material, and estimate quantity roofing required accordingly, but a unit covering should be based on a 'regular' surface. A dressmaker or tailor always figures a certain waste of material in 'cutting' and estimates accordingly.

"The manufacturers feel certain that in changing to the 'square' unit, they are making a progressive step, that will be approved by a big majority of the retail dealers, and that small proportion of dealers who may not at first be inclined to favor this change, will favor the move strongly after they have given the merits of the proposition full consideration."

Has Simplified Shingle Selling

Writing to the Toronto office of a B. C. lumber firm who specialize in shingles, the Secretary of the Shingle Branch West Coast Lumbermen's Association, says.:

The best thing that can be said about any proposition is that it works, or as the old adage goes, "There's nothing that succeeds like success."

I have yet to hear of a complaint from a retail dealer who has sympathetically tried out the sale of shingles packed by the square unit. Such dealers report absolutely no trouble with the new unit —say that it has simplified their shingle selling—and that their customers like it.

When a retailer tells his trade that they guarantee four bundles of square-packed shingles to cover 100 square feet of surface when packed according to the standard weather exposure, and if they won't do it that the dealer will make good any shortage, there is nothing left to understand, and both the dealer and consumer are getting a measure of protection they were not afforded under the old thousand unit. Because if the old thousand unit was short count, nobody had any way of checking up to see whether it was short or not.

Frequently the objection has been offered that if the shingles were only laid 4 inches to the weather or 5 inches to the weather, that it would be just as hard to figure out as if the shingles were thousand packed. But when they understand that all that is necessary is to estimate the area to be shingled, add 10 per cent. in the former case or substract 10 per cent. in the latter case, the result being number of squares of shingles required why they look at the unit differently.

Eventuality of the Square Unit

Here is another point that I am rather surprised that the British Columbia shingle manufacturers have not jumped at—that is the shingle manufacturer who packs his shingles in a careless or slovenly manner simply can't "get by" on the square basis without getting into trouble, because his shingles won't hold out in count. But with a 100 per cent. serviceable shingle such as the B. C. mills make, they would have no trouble from this source. In other words the square unit rewards honesty of manufacture and discredits dishonest manufacture.

It is pretty certain, too, with every last number trade journal in the United States endorsing the square unit that they must feel that it is correct merchandising and that this unit is gradually going to become an exclusive unit. In the event of failure of this unit, they would certainly not want to find themselves on the wrong side of the fence. But it is not going to fall. The demand right today is fully one-third greater than the supply of square packed shingles.

I can't believe that human nature is very different, whether such humans be found in Ontario or Texas, or Alberta or South Carolina. And I can't believe but what with the proper effort behind it, the square unit can't be just as satisfactorily introduced into Canada as it is being in the United States. It is altogether a matter of proper selling effort being put behind this to make it go..

Double standard all will agree is not desirable. One thing is certain—the square unit has come to stay. Therefore, the only logical thing to happen is for the thousand unit to go into the discard. And this very thing is bound to happen within the next year or two.

What Ontario Lumber Dealers Say

With a view to learning how the new method of packing was catching on in Ontario and how customers looked upon the change, the "Canada Lumberman" recently obtained opinions from representative dealers in all parts of the province. The question was asked if the "square" unit for packing and selling red cedar shingles had "caught on" and if customers called for the square in preference to the thousand. It was also asked what advantages, if any, the square possessed and what were the objections raised to it.

Many replies have been received and they are published without comment.

W. G. Gorvett, of Arthur, says that for his trade he wants shinngles packed by the M and he has no desire to educate the farmers to a new fad as it looks to them as though they had to pay more. "In this part of the country they lay shingles 5 in. to the weather. If a customer wants to lay the shingles 4½ in. to the weather, we sell him ¾ of a M or 3 bunches, and if he lays 5 in. to the weather, we add 1/9, which will lay 10 ft. square. As you know, 720 shingles make a square laid 5 in. to the weather," concludes Mr. Gorvett.

Ament Bros., of Brussels, say they have never handled shingles by the square and are not in a position to give an opinion on the same. They have always sold their shingles by the M.

N. Cluff & Sons, of Seaforth—We have not handled any shingles packed in squares and since you have been kind enough to ask our opinion on the subject, we must say that we do not favor it at all. At present we buy our shingles by the thousand and sell them as three bunches a square. The three bunches are supposed to lay more than a square, but experience teaches us that at 5 in. to the weather, they barely lay out; consequently, we think that if any dealer wants to sell his shingles by the square he can do so with the present thousand pack.

James M. McBride & Son, St. Catharines: We have had two cars packed by the square and do not intend to handle any more as long as we can buy a first class XXX shingle packed by the M. In the Niagara district 16 in. shingles have always been sold as three bunches to the square laid 5 in. to the weather. We found by the new pack that we had to spend too much time explaining it to our

customers and had to figure out how many bunches laid 5 in. it would take to cover the space required for each order, whereas by the M pack an order for 10 squares, thirty bunches were sent and the customer knew what he was getting. You would have to handle 7 bunches new packing to 6 bunches old packing and if you follow that extra bunch from the car until it gets on the roof you will find that it has cost not less than 10 cts. and the mill have also charged for packing and handling that extra bunch. It does not take many small items to add $50.00 to the cost of a home.

Strongly Endorse Old Method

Wm. Shirton Co., Limited, Dunnville, Ont.: In reference to the respective merits of packing shingles by the thousand or square, we are strongly of the opinion that the old method is superior to the new. Our objection to the square packing is that the manufacturers have taken it upon themselves to change the amount of surface to be laid by the shingles to the weather from 5 in. to 4½ in. We have never seen an explanation of the reason for this change as in our district 5 in. has always been the accepted space for shingles to be laid to the weather. This change has further confused matters with our customers. All things considered we much prefer to buy shingles by the old method of thousand packing.

H. J. Hall & Son, Kitchener, Ont.: We regret to report that the square unit for packing and selling Red Cedar Shingles has not, as you express it, "caught on" in our district. Our customers do not call for the shingles by the square, and we make no sales whatever, by the square.

Walter T. Piggott Lumber Co., Windsor.: We have had one car of shingles packed in squares shipped us, and the parties that used them were suspicious about them as they could not understand why the bundles were so much smaller than they used to be. We made a difference in the price of squares and thousands, and found it took too much time to explain matters, and we will not purchase any more shingles packed in squares, when we can get them in thousands. Our men can handle 1000 shingles as quickly as they can a square, and with the high cost of labor, we find that it is not as economical for us to handle squares as to handle thousands. With the difference made in the price of shingles sold by the square compared with those sold by the thousand, we cannot see where there is any benefit derived by the mill people by putting them up in squares instead of thousands. In fact, we think that the mill people are to a disadvantage in packing shingles by the square instead of the thousand for the reason that men can handle ¼ thousand as quickly as they can handle ¼ square. We have been in business since 1869, and in the early years, shingles were all put up in the square, and the trade found that it was more advantageous to pack them by the thousand, and the squares were obliterated. In my mind, it seems as if we were going back to the old times by putting up shingles in squares instead of the thousands. Our trade here has been cultivated to use shingles packed by the thousand; and every person is satisfied, and to introduce the square proposition is in my mind a sad mistake.

Customers Suspicious of New Plan

R. W. Nicholson, Strathroy, Ont.. We received a car of B. C. shingles packed 4 bunches to the square and the balance of the car packed the usual way, 250 to the bunch. We had no difficulty in selling the shingles packed 250 to the bunch but customers not accustomed to buying shingles by the square were suspicious and thought there was something the matter with the shingles. The people in this district would have to be educated to this way of packing the shingles before they would sell readily. As far as we are concerned we will not buy any more shingles that are not packed in the usual way of 250 to the bunch. The advantage of selling shingles by the square is that all other roofing is sold by the square and shingles being sold by the thousand the buyer gets confused and thinks that a thousand shingles (four bunches) is only equal to a square of other roofing, while three bunches packed 250 shingles to the bunch is equal to a square. Also you can see that by the ignorance of the buyer and duplicity of the dealer of other roofing if he wished to do so he could make the price of shingles look higher than they really are.

Kalbfleisch Planing Mill, Stratford, Ont.: We as well as other dealers in Stratford have so far purchased shingles only by the M. We are therefore not in a position to say much regards this matter. Due to possibility of misunderstanding with other customers we prefer to buy by the M and sell by the bunch or 3 bunches to the square.

McClellan & Co., Limited, Bowmanville, of which Chas. Jewell is president: We have had no experience whatever with the "square" shingle problem, therefore are not in a position to express an opinion on the merits or demerits of the proposition. Our customers all seem satisfied to take the shingles on the "thousand" basis, and we do not think it is worth while to make any change as long as we can buy them put up that way.

Too Much Loose Shingle Packing

A. J. Grant, Cayuga: I have read considerable about the new idea of packing shingles in squares and as all other roofings are sold that way, I think it is a good idea, provided all the manufacturers would agree to it. I have not bought any packed in square yet but have been selling by the square for four or five years, giving three bunches for a square. The reason is this, that most people got it into their heads that a thousand shingles only covered a square, and all the hardware dealers told them that was right, and quoted their price on a square of roofing shingles, or ready roofing against price per thousand shingles, showing the roofing to be the cheapest. I have nothing to suggest further than that they either pack them in three or four bunches to the square and make their bands to suit. The only complaint I have about shingles, is that there is too much loose packing done by some firms making shingles, which prevents them from holding out, and the buyer usually comes back at the dealer, with a complaint and expects him to make good the shortage.

J. A. Laberge, Sudbury, says, "Personally we would rather handle shingles by the square but have not handled any as yet packed by this method so cannot speak for the general public. The main reasons we would like to see shingles sold by the square are that all other forms of roofing are disposed of on the square basis."

The Berhalter Lumber Co., Thorold, Ont.. "We prefer the old method of packing. There is no reason for changing in our district."

McCabe Bros., Tottenham, Ont.: "We are not handling shingles this year and have not had any opportunity of getting the opinions of people in our district."

Davis & Doty, Oakville: "We much prefer shingles packed in ¼ thousand bundles and have had no call for the square."

Sells Three Bunches to Square

J. B. Mackenzie, Georgetown: "We have not handled any square-packed as yet and will not as long as we can buy shingles by the thousand packed. We sell all shingles here per square, 3 bunches to a square. As they are laid 5 in. to the weather, the 3 bundles cover 100 square feet. To introduce the new packing, would result in a lot of explanation without any advantage either to the customer or to the retail lumber dealer."

The Ball Planing Mills, Barrie: "There was a time when it was impossible to get wood shingles from the Coast and we were forced, much against our will, to adopt the Brantford slates in their place. We now find that it is very hard to sell wood shingles. Everyone is after the Brantford slates on account of their fine appearance. We have not bought any shingles on the square basis, only by the thousand, but in any event we think that it is going to be very difficult to sell wood shingles on either the square or thousand basis."

M. Bristol, Madoc: "I never bought any shingles by the square and do not really know the advantage or disadvantage. I have always bought them by the thousand and have no complaint to make."

Old Way Good Enough for Him

Eugene Murphy, Mount Forest: "I have been very much interested in the discussion of the new packing per square and the old packing per thousand, but I am more satisfied with the old packing by the M. I have seen the new packing but never bought any nor do I intend to so long as I can get the old packing, which I find satisfactory."

C. S. Coates, of A. Coates & Sons, Burlington: "Personally I do not see the point for changing. We have never handled shingles packed by the square and have always sold those by the thousand, which we find works out satisfactorily."

Gill & Fortune, Trenton: "We have just received a car of red cedar shingles packed four bunches to cover a "square", laid 4½ in to the weather. So far we find they are quite satisfactory sellers, but as yet we have not found customers asking for them in preference to shingles packed four bunches to the M.

J. A. Matthews, Orangeville. "The square packing does not suit in this district. We have been selling three bunches to the M. packed to allow a square of 5 in. to the weather, and it works out about right. Most of the people in this district lay shingles 5 in. to the weather, and the square-packed puts that rule all out as they do not know where they are at and it takes a lot of figuring to show some men."

Guelph Lumber Co., Guelph, J. A. Harrison, manager: "Respecting packing and selling B. C. shingles by the square, we find in this district that people have always bought by the square, that is 3 bundles. They know that a thousand means 4 bundles. We would certainly recommend that packing by the 1000 be continued for one

particular reason, namely, many places sell by the 1000, 4 bundles, whilst others sell by the square, 3 bundles. The general public are acquainted with these two methods and are satisfied with it.

S. Bennett, Wingham: "I prefer shingles put up in ¼ M bundles, or still better to my mind it would be preferable to have all shingles put up in ½ square, that is, two bundles to make one square or 720 shingles or two bunches."

Likes Larger Units Best

S. Anglin & Co., Kingston: "Concerning square unit for Cedar shingles, would say that this unit has never been used in this city as far as we know. We will not buy shingles put up by the square as long as we can buy them put up by the 1000. We have usually considered that we received more shingles for our money when purchased by the 1000. This may be only a matter of chance, but such has been the case, and we are desirious of giving our customers as much as we can for their money. We think the dealers in the western part of the province are in a better position to express an opinion, as this is a matter which particularly affects the western shingles. We are situated near enough to Quebec and New Brunswick to be able to handle the eastern shingles profitably. As to the question of units, we are inclined to favor the larger unit and will not be likely to adopt the smaller unit until it is more generally used."

The Baker Lumber Co., Lindsay, C. H. Baker, president: "I would not buy shingles by the square and cannot see any benefit to be derived from the change. The farmer with whom we do a lot of business is a hard man to get to understand a change like buying shingles in squares instead of thousands. In fact, I have handled shingles for over thirty years and I cannot understand why the mill men suggested handling shingles by the square. As far as I am concerned I am absolutely opposed to the change."

Packed by Square is Satisfactory

J. Boshart, of the B. & N. Planing Mill Co., Milverton: "We have had no experience as yet. We just unloaded our first car of B. C. shingles packed by the square a week ago. To our opinion we thing this alright, and better than packed by the thousand. Shingles in this district have always been sold by the square, three bunches to the square. In this case when they are packed by the square we consider that we would be giving the customer exactly what we are selling him, the same as paroid roofing. To our opinion so far we consider packed by the square are more satisfactory.'

Robert Oliver, Listowel: "We have never practised selling shingles by the thousand. It has been customary for contractors to order by the square. We have always practised selling three bunches supposed to cover a square, but charge our customers so much per bunch, and if he has sufficient to cover his space well and good and if he has not he orders more. In other words we do not guarantee three bunches to cover 100 square feet. Personally I feel that the square unit for packing and selling shingles is the proper method as all other kinds of roofing are sold and branded by the square and why not shingles."

Wm. N. Acton, Almonte, Ont.: "I am not at all in favor of the square method. My customers have not called for the square packing in preference to the M. So far there is but little evidence that the square is going to supercede the M and, therefore, it has been given but little consideration. In any case the advantage would not be great and there would be confusion in the transition, as it would be impossible to state the stock on hand which is an M at a stroke. There would be a like difficulty attending to the bringing in of the new stock. Unless all manufacturers see fit to put up shingles in squares, the change for which does not appear to be urgent and for which there is, apparently, no great inducement, I do not think any in this district will object to the present method by which shingles are sold. To my mind to put up shingles by the square packing is not economy at all but is rather extravagance, meaning more bands, more straps, a greater number of bundles for the same quantity in transferring from the mill to the roof, etc."

Other Views on Live Topic

James Sparling, of Meaford. "I think shingles packed and sold by the square is misleading and deceiving the public to a certain extent as the majority of the public when they buy shingles expect to get a M as has been customary for many years. There is a company not far from here where they sell shingles by the M but they only receive three bunches and call it a square, which to my mind is rather misleading, as 750 shingles will not cover a square at 4½ in. to the weather, which is the customary way to lay them in this section."

W. G. Parish, of Athens, Ont., says: "I have been handling mostly New Brunswick cedar shingles this season but have recently thought of going back to B. C. red cedar. I can assure you our customers will prefer them packed full thousand and not by the square. Most of them know the difference quite well and will gladly pay the difference in favor of the thousand."

The Schuster Co., Belleville, state they have never as yet handled any shingles on the square method and find no special call for the new packing in that district.

J. Roussel & Son, Hamilton: "Personally, we would prefer the square, as we have it, as the weight of a bunch of shingles is not too much for a man to lift, or carry with any amount of difference. We, therefore, claim it labor saving on the man climbing to the roof, three times instead of four, which in these days is a big item. We would rather take a bunch as at present three times than a little smaller bunch four times."

George Clendenan, of Clarksburg: Regarding the change to squares there are very few complaints. The customers are taking this matter about the same as other sudden changes, and say very little. They are paying the price and are apparently satisfied.

Large Party Visits Kipawa Plant

The splendid new sulphite plant of the Riordon Co., Montreal, which is located at Kipawa, was visited by a large party recently as the guests of the company. The visitors travelled in a special train from Montreal and consisted principally of customers, officials and other friends. A large number were representatives of American paper interests who are buyers of the raw material from the Riordon Company.

The new mill is the last word in up-to-date equipment and is at present producing 150 tons of bleached sulphite pulp. The plant was the source of much interest and instruction and work is now proceeding in doubling the capacity as originally planned. The Kipawa plant is located at the southern extremity of Lake Temiskaming.

Among the lumbermen who participated in the excursion were Arthur H. Campbell, of Campbell, McLaurin Co., Montreal; A. E. Clark, of Edward Clark & Sons, Limited, Toronto; Stewart Grafftey, of Montreal Lumber Co., Montreal; A. E. Grier, of G. A. Grier & Sons, Limited, Montreal, and J. G. Shearer, of the James Shearer Co., Montreal.

There is a well told tale to the effect that efficiency means to be able to buy from a Jew and sell to a Scotchman at a profit. Note the following: "Hey papa," says little Ikey at the restaurant table, there's a fly in my soup." "Vell Ikey," says papa, "eat the soup till you come to the fly. Then call the vaiter and he'll give you another full bowl of soup."

Attractive Office and Lumber Yard

The accompanying illustration shows the yards, office and shed of the Beaver Lumber Co. (A. J. DeLaplante) Ottawa Street, Hamiuton. The company are manufacturers of flooring, ceiling, siding, moulding and general wood turnings, and handle a general line of forest products, both Ontario and B. C. stocks. The Beaver Lumber Company make a specialty of bill stuff to order. The office of the company is one of the most attractive and convenient of any retail yard in western Ontario. It was built last year and embraces all the latest ideas in construction and convenience. The location of the company's plant and yards is opposite the Jockey Club.

How Aircraft is Used in Logging and Forestry

Aerial Transportation and Photography Have Come to Stay, and With Careful Development will Prove Invaluable in Management of Timber Holdings

By Ellwood Wilson, Chief Forester Laurentide Co., Grand Mere, Que.

In the spring of 1919, the writer proposed, for the second time, to the directors of the Saint Maurice Forest Protective Asscciation the use of aircraft for forest fire patrol and asked the department of naval affairs for the loan of two seaplanes, from a number of Curtiss HS2L boats which had been turned over to the Canadian Government by the United States army. After some negotiations, a contract was signed between the department and the association and the two planes were piloted from Halifax to Grand Mere by Lieutenant Stuart Graham, who had been engaged as a pilot. This trip was in itself quite a feat and, at that time, was the longest overland flight made by seaplanes in Canada.

The planes arrived at Grand Mere on June 29 and commenced patrol work, but the fire season was practically over, only three or four fires being reported after that date, and of these the planes saw all. When it was realized that there was very little to be done in the way of fire patrol, an effort was made to get an aerial camera, but owing to strikes and other difficulties this was not obtained until September, and from then till the 1st of November about 400 photographs were taken. In addition to this, officials of various companies were taken on trips, officials of the commission of conservation and others and several reconnaissance trips over timbered areas were made.

Airplanes Found Practicable.

The result of the work was not satisfactory to the Fire Protective Association, which decided that the cost of using the planes for patrol alone was too high, and that the carrying of passengers and taking of photographs was outside of its regular line of work. However, the Laurentide Company, Ltd., had been so well satisfied with the work that it requested the association to turn over the planes, and this, with the consent of the department of naval affairs, was done. The writer has been in charge of the aerial work for two seasons and gives herewith the results of the work. The first season showed absolutely the practicability of the planes for reconnaissance of unmapped or mapped areas, for transportation of passengers and of fire-fighting equipment, for looking over the work of log drivers, for spotting forest fires and for aerial photography.

The winter was spent in overhauling planes and engines and in the study of the pictures taken from the air, on the ground. This spring a photographic laboratory was equipped so that photographs could be handled well and expeditiously. The work commenced on May 17 and has been continued regularly to date, the appended table giving the amount of work done:

Miles flown	6,006
Hours flown	101
Photos taken	3,000
Acres photographed	543,100
Fires spotted	34
Passengers carried	23

The longest flight from the base was 250 miles out. In the course of the work done above many different things were accomplished. A flight of 440 miles was made to stake out a mining claim. The plane carried four persons, two tents, folding canoe, provisions and instruments. The party stayed out two nights and much time was saved as, in the ordinary course of events, it would have taken two days' travel each way by canoe, and with the plane it took less than an hour.

Country is Photographed.

A boundary survey of some limits had to be made, and the starting point was difficult to locate, for if all the work were to be done on the ground, 22 miles of chaining through the woods would be necessary to locate an intersection from which to commence. The plane was sent up and the three sides of the triangle, necessary to locate the intersection, were photographed in one day, and the course the new line would have to follow was also photographed, showing all the lakes, streams and hills which the line would cross.

On two sides of the triangle, lines which already existed, were visible in the photographs at numerous places on the ground and could easily be joined. Thus, all of the field work is practically checked up before beginning the work, which can now be planned with great exactness. It is proposed to put provisions on the lakes which the line will cross, ahead of the party so that they will only have to carry enough to last for a short time and save heavy portaging through the woods.

Explorers were taken over territory which was offered for sale, and of which there were no maps. The observer sketched in the burns, timbered areas and other information, and at the same time got a very good idea of the country as a whole. Then, taking his sketch maps, he went in on the ground and estimated the timbered areas, saving much time which would have been wasted in locating the burnt areas. In one trip a reconnaissance of about four hundred square miles was made. The logging manager made several trips of this kind and with his sketch maps and his birdseye view of the country was able to lay out and direct the work of his explorers. Several flights were made to note the progress of drives, and it was very easy to see just how the work was progressing and whether the streams were being swept clean or not. In one case a large number of rollways of logs were discovered and photographed, which had been left in the woods the previous season. Trips were also made to look over and estimate the number of logs in the sorting booms so that the time and number of men required to saw so as to finish before the winter, could be determined. The logging manager and his superintendents were taken to and from distant points of their work and much valuable time saved.

Lands for Planting Photographed.

One of the most valuable parts of the work was photographed lands which are to be purchased for planting. A complete dictionary of these lands was made, and as the photos give every detail and are of great value. Lot lines, buildings, fences, ditches, roads and the areas of different kinds of land all show plainly. Even the character of the soil can be seen. The areas in cleared land, swamp, burn, scrub timber and good timber can be easily measured with a planimeter and the exact value of the land determined. A scale of prices for the different kinds and qualities of land is determined and all lands are bought by it. The seller and the purchaser can sit down over an aerial photo and make a trade much better than in any other way for they have all the details before them.

In planning all kinds of engineering work, laying out roads, ditches for drainage, areas to be planted and so forth, the photos are of the greatest assistance, and by taking a series the progress of the work can be checked much more rapidly than by ground measurements. The areas cut over in a logging operation can be checked on the photo, the roads can be seen, areas left uncut be determined, and the general efficiency of the work judged.

The general results from the work promise well, and the Laurentide Company has decided to make aerial work part of its operations. Permanent hangars are being built, together with houses for the personnel, and shops for the care of repair work.

Cost of Work Not Excessive

The cost of the work, as carried on experimentally, has not been excessive, and as it becomes standardized, can be materially reduced. The main thing is to have the machines in the air as much as is possible so as to cut down the unit costs of the work. The cost per mile works out at about $3 per mile and the cost of photographs at about 2.6 cents per acre. This is based on the use of the HS2L seaplanes, which use about 25 gallons of gas per hour and are slow climbers. Also there are many items of expense which are incident to beginning the work and which will be eliminated later when more experience has been gained.

Seaplane Type Satisfactory.

The following general conclusions can be drawn from the experience gained thus far. For work in country where there are many lakes, the seaplane is the best type of machine. The float type has not proved satisfactory, as the floats are very fragile and easily become waterlogged. The seaplane is structurally strong and rugged and will stand much harder usage. It presents fairly stable platform for a camera. The type we are using is ideal from every point of view except cost of operation, and we have purchased a Curtiss "Sea Gull" for patrol work, passenger carrying and photography. The larger machines will be used for carrying provisions, large parties and fire-fighting apparatus.

The personnel of a flying station is a matter of great importance. Experienced pilots are necessary, and the fact that men have wide experience in flying land machines does not always qualify

*Paper read before Pacific Coast Logging Congress at Vancouver, October 6-9.

them for seaplane work. Only the highest type of men should be employed, both as pilots, mechanics and riggers, as men of a lower type are likely to have a lower sense of the responsibility and importance of their work. Men who are reckless or who drink should never be employed.

Rigid inspection before flights are absolutely essential and no machine should ever go up if there is the slightest doubt about it being in perfect flying condition. The amounts invested are large and the loss of a machine is a serious matter, even leaving out of account the risk to the personnel.

Small Dirigible Valuable Machine.

The development of the "poppy blimp" or small dirigible, opens a new line of development which is very promising. With speed of 45 miles per hour and a wide cruising radius, it uses only three gallons of gas per hour and has a greater carrying capacity than a plane. As it can be stopped in the air at almost any altitude, it offers an ideal means of timber cruising and mapping and for carrying fire-fighters and equipment and also supplies for survey parties and logging camps. If the risk of fire is not great and the cost of plant for charging with gas not too expensive, it will be an ideal adjunct to forestry and logging work. It will also do away with what in the northeastern part of the continent is a great drawback to aerial work—the inability to fly in water. It may be that we shall be able to make winter flying practical, but so far it is out of the question with planes on account of the low temperatures and deep snows which we have in eastern Canada.

I feel that aerial transportation and photography have come to stay and that with careful, well-thought-out development, will prove invaluable in the management and exploitation of large timber holdings. We are constantly trying to study out new ideas for the planes and the camera and are sure that their field of usefulness will become ever larger and more important.

To sum up the results so far obtained, for carrying men, whose time is valuable, to distant parts of the work, the planes are most useful. The manager of a company with large woods interests get tied down to his office and mill work, and a trip into the woods consumes so much time that he does not like to take it. The same is becoming increasingly true of logging managers and superintendents. They do not like the hardships of long journeys into the woods and being out of touch with their general work for days at a time. With the planes, the most distant operations can be visited and the work inspected with only one night away from home. Local foremen in the woods will be kept up to their work much better. In case of accidents, doctors can be rapidly taken into the woods and injured men brought out. Mail can be taken in and reports brought out much oftener.

For rapid reconnaissance the planes are invaluable. Tracts which are for sale can be inspected in days, where weeks were required before, and the information obtained is much more accurate and full than ground work. In a few hours in the air the general drainage of a country can be determined; burns, swamps and timbered areas sketched in, the species present noted and the general character and quality of the timber ascertained. Windfalls and insect damage can be seen, and all areas estimated with more accuracy than from a strip survey. When the ocular survey is supplemented with photos there is no room for doubt about the character of the country, and instead of depending on the opinion of the man who has made the reconnaissance, all the responsible men interested can get together and discuss a purchase or a proposed operation intelligently and with the information before them.

Spotting Forest Fires Valuable Feature.

Spotting forest fires and taking men to extinguish them is a valuable part of the work. The carrying of provisions to distant operations will certainly become a part of the work before long, doing away with the building of expensive tote roads and making possible the placing of provisions just before the work begins instead of taking them in the previous winter, thus doing away with spoilage and the cost of insurance and the labor necessary to watch them. Then, too, it will not be necessary to build large depots from which, oftentimes, quite long hauls so separate camps must be made, but provisions and gear can be put right down at each camp. In the purchase of lands for other than logging purposes, aerial photos are invaluable, giving as they do, all the information required.

The aerial camera is going to be more and more indispensable. So far as our studies have gone, the types of timber and land can be accurately determined. The actual number of trees in the crown cover can be determined and a fair idea of the general size of the stand obtained. For forest maps they are infinitely better than ground surveys, giving all the information needed rapidly and accurately and in a form which everyone can easily learn to understand. Instead of the information being stored up in a man's head or in his notes, which are often colored by his personal idiosyncrasy, it is always available and leaves no room for varying opinions.

The technic of reading these pictures and of making estimates from them is being carefully and thoughtfully studied and a regular dictionary being built up. Much ground work will be carried out this winter, especially in the estimation of quantities from the photos.

The Traction Problem in Logging Operations

Present-day Truck Logger is Pioneer in Field that has Relation of Growing Importance in the Great Industry—More Special Equipment Needed

By E. H. Meiklejohn, Meiklejohn & Brown, Seattle, Wash.*

If it were possible to gather accurately the necessary facts and figures, a consolidated report on costs and methods of the trucking branch of the logging industry would be both interesting and instructive. As this method of logging is, however, in its infancy, information for such a statement is not available and I am going to confine my remarks to a brief statement covering the Meiklejohn & Brown Co. operation. The following general information will be pertinent to the cost figures given later.

Our works are located midway between Snohomish and Monroe, Wash., on the paved highway, the distance being about four and one-half miles from each place. When we opened up the operation the timber extended back from the pavement a little more than a mile and for the first six months of 1920 we have been working on the back end of the tract. We dump in the Snohomish River near Snohomish, and while our present haul is actually ten miles round trip, in our cost accounting we use nine miles as the distance, that being a general average for the entire tract. Our timber is small second growth, averaging about 55,000 feet per acre. We have no camps. Members of our crew live in Monroe, carry their lunch and travel to and from the timber on the trucks. This has worked out in a very satisfactory way from a standpoint of economy and has given us an unusually permanent crew.

The following cost figures taken from the summarized cost sheets of our company for the first six months of 1920, show the cost of taking the logs from the spar trees, an average distance of five miles to the dumping point. This five miles is made up of four miles of pavement and about one mile of road of our construction:

*Paper read before Pacific Coast Logging Congress at Vancouver, October 6-9.

Road building—$1 per 1000 feet. This is an accurate figure as applied to our operations but is bound to be a fluctuating item under different conditions, where the stand of timber is greater or less, where the physical conditions for road building are different and where any amount of road has to be built through blank territory. Our road building was entirely in the timber.

Gas and Oil—.383 cents per 1000 feet. This includes the run to and from town and all gas used in repair work, etc.

Drivers—$1.161 per 1000 feet. Covering wages and overtime of drivers for both hauling and working with the truck mechanic on repairs and upkeep.

Repairs and Incidentals—.681 cents per 1000 feet. Covering mechanic's time and any blacksmithing or other help apart from the drivers, parts and replacements, tires, licenses, insurance, accidents, etc.

Roading—.402 cents per 1000 feet. We operate a 1400-foot incline with a donkey for pulling up the trucks and lowering the loads and this item of .402 cents covers the entire cost of using the incline and for comparative purposes may be dropped from the total cost where an incline is not necessary. I may here state that this incline, running from 15 to 20 per cent., has never caused any trouble or delay.

Depreciation—.383 cents per 1000 feet. This is figured on a basis of approximately 20 per cent., allowing five years for the life of a truck.

The Total—$4.01 per 1000 feet. This covers all items of cost incident to transportation.

Deducting the item of .402 cents, the cost of operating the incline, and we have a transportation cost of $3.61. If you will refer

to your consolidated cost sheets from the information bureau you will note that these figures compare favorably with average transportation costs both for 1919 and thus far in 1920.

Analysis of Cost Items.

Referring to the repair and incidental account, which shows a cost of .681 cents per 1000 feet for the six-month period, I find from our records that this item over the entire operation from April, 1918, shows an average cost of .625 cents, and for the purpose of segregation under its various heads, I can best use the figure for the longer period. The four headings under this account are repairs, tires, state licenses, insurance and accidents, and are set up as follows:

Repairs	$ .415
Tires	.079
Licenses	.089
Insurance and accidents	.042
Total	$ .625

The repair item is considerably higher than it should be because two of our trucks are not suitable for the work. They were used trucks when purchased and have given considerable trouble. The repairs run from two to six times higher than on the other three trucks, which were new when purchased. I cannot recommend second-hand trucks for logging.

You will note that the tire cost is less than the license cost.

The load limit on the pavement on the particular stretch over which we are hauling is 2400 feet, and working against this limit, the average we were able to maintain over the six-month period was 2061 feet. Had we been working entirely on roads of our own construction or where there was no limit, we could easily have averaged 3000 to 3500 feet, which would have resulted in a material lowering of transportation cost.

I do not favor extreme heavy loading as a regular programme. A good honest load, proportionate to the equipment in use, one that handles easily and loads and unloads quickly, will make more money and wear out less equipment on the average log truck haul. Equipment and roads, however, should be figured to handle extreme loads when necessary.

Reducing our transportation cost of $4.01 per 1000 feet to a per 1000 feet per mile basis, we find under this light load limit that the cost is 38 cents. This takes into consideration the mileage to and from town. One can readily see a considerable reduction in the per mile cost on this haul were the loads are 50 to 100 percent. heavier.

Construction of Road.

Taking up the question of road construction, we have been using the generally accepted type of road, viz., cross ties with planked runs and sheer logs. In our case, instead of using plank we used hewn timbers. Our specifications called for cross ties ten feet apart and runs 30 inches in width, 36 inches apart, with not less than eight inches of thickness where runs rest on the cross ties. This gave us a road on which we have no upkeep account. We found it advisable as far as possible, to use three lengths for side or sheer logs, using trees 12 to 18 inches in diameter on the stump. They were more easily tied in place and gave no trouble at all. I believe this type of road is the most practical and in the long run the most economical where any quantity of timber is to be moved.

Cost on this road averaged $150 per station, and in view of the fact that we had comparatively easy grading, I have always felt that we could do it for considerably less if we were doing it again. I would not, however, recommend sacrificing strength to make any saving on this figure. On an operation of a size sufficient to warrant, I believe that a small portable mill on a sled would be economy in getting out material for road construction, and I would then favor using more cross ties, and six-inch planking for the runs, planking, in solid on the sharper curves.

The matter of traction on roads of this construction is a problem on grades of any consequence. In our case, on account of going onto the pavement, we cannot use chains or cable on the wheels but have largely overcome the difficulty on grades up to 10 and 12 per cent. by stapling down cast-off three-eighths to seven-eighths-inch cable, back and forth across the runs. We have not found it necessary to use grades beyond 10 to 12 per cent. except on the incline, and I am not prepared to say what would be practical beyond this. We tried sand, small gravel and clinkers with indifferent success. The cable stapled down as above has, however, defeated the trouble for us.

Not having used extreme grades, we have not equipped our trailers with brakes. On 600 or 700 feet of 9 per cent. grade running down to the head of the incline, where loads have to stop at a given point to hook onto the incline line, we had some trouble in wet weather, but an endless cable working on the ground through blocks that the line passes through a bite of sufficient sharpness to give the necessary snubbing power, nicely defeated this. A short cable or chain on the trailer axle provides a handy method of hooking on.

This is a camp used only as one of the drive camps in connection with the logging operations of the Canadian National Railways near Foleyet, Ont. The camp is made from cull lumber. It will be noticed that each man has a single iron bedstead.

This arrangement will successfully snub loads on any grade that the truck can climb light, over road that is comparatively straight.

Traction Problem Discussed.

On roads where chains or cable may be used on the wheels much better traction is given and braking power may be more safely applied. While I have given no study to the details, I see no reason why air brakes would not be practical. However, applied braking power is directly related to traction and it would seem to me that the big problem is traction. This is perhaps more acute on the trailer than on the truck proper where the driving power gives a traction advantage. The trailer carrying 60 to 70 per cent. of the load is the logical place to do the heaviest braking, but on planked or timbered roads, with no driving power on the wheels, even though they are chained or cabled, the braking possibilities are limited and brakes must be used with caution. While I have no definite data on the subject, I understand that the application of power to the trailer wheels is not a remote possibility.

The pneumatic truck tire no doubt gives considerably better traction and is easier on the equipment, but from the best information I can gather, has not been perfected to a degree that would make it practical or economical in logging. We have, however, had no experience in its use on trucks.

The present-day truck logger finds himself in ver y much the same position as the logger of only a few years back, who was bringing logs out of the woods with a one-drum donkey, using a horse to drag the line back. He is pioneering, but, I believe, pioneering in a field that has a relation of growing importance to the logging industry. The old one-drum donkey got logs out after a fashion. The motor truck does the same, but there is room for just as much improvement in the logging truck as has been made in the donkey engine.

This is not a criticism. I take off my hat to the truck manufacturers. They have made most amazing strides in building up truck stability and efficiency. Their field, however, is so large that they have not yet taken advantage of the opportunity to build a truck adapted to logging.

The logging industry in all its departments calls for special equipment of special construction and strength, and while the results obtained from the use of the general utility truck have been most gratifying, the field is still open and I have no doubt that the problem of logging will be taken up in a more comprehensive way by truck manufacturers.

Efficient Loading of Trucks.

Where road conditions will allow, 3000 to 4000 feet is about the average load. Thirty to 40 per cent. of this load rides on the truck and 60 to 70 per cent. on the trailer. Where the load contains logs as long as 40 feet the trailer is back 22 to 24 feet and still has to carry an overhanging load around 10 feet in length. This is obviously an awkward load to handle. We have the principle of hitching the team to the end of the wagon tongue. It is a difficult load to keep on roads of narrow construction and is next to impossible if the trailer leads off the road or gets into a bad place.

This percentage of load on a trailer with two wheels is hard on roads of any construction. The overhang has a sufficient leverage

over the trailer to give the truck a fluctuating load with consequent loss of traction in heavy pulls and not a little damage to the truck.

With the cab, windshield, controls, hood and radiator all above the level of the truck bunk, the loaders and loading engineer have to use unusual precautions in putting on a load. This results in a material loss of time and even their best efforts in this connection cannot prevent expensive breakage that adds to the lost time.

Where loads are being taken from the pile under a spar it is unsafe for the truck driver to remain in his seat, and the advantage of moving the truck forward and backward to suit the convenience of the loaders is lost.

Success in truck logging is wholly contingent on keeping the trucks moving, and anything that will speed up loading and unloading should be given serious consideration both by the logger and the truck manufacturer.

Operation of Truck and Trailer.

To this end, I have in mind a truck with not superstructure of any kind—all as clear above deck as a flat car. This permits the trailer to be brought up closer to the truck or allows the shortening of the truck unit itself if that would be more desirable. It makes possible the proper apportioning of the load between the truck and trailer, giving better driving traction to the truck, and making the trailer less a drag and more an actual part of the unit. The loading would be easier and much faster. I believe the loads could be put on in half of the time. The constant source of worry and expense—smashed cabs and broken controls—would be eliminated.

This change would not usually call for any lowering of the engine, merely a lowering of the radiator and hood and possibly the placing of proper guards to protect the engine. I have talked with a number of mechanics on the problem of placing the controls and driver's seat out in front or to one side of the radiator and low enough so they are below the load level, and all agree that this could be worked out without materially adding to the expense of the equipment.

The bunk on the truck would still remain approximately over the rear axle but if necessary could be built somewhat higher than it is to give proper clearance at the front end. In hauling poles, piling or logs longer than usual one can readily see possibilities under an arrangement along these lines.. With the controls out in front low enough to be out of danger, the driver can keep his motor running and in moving his truck to suit the convenience of the loaders give material assistance, first in properly putting on the load and next in putting it on in the least possible time.

No doubt there are weak points in this suggestion from a mechanical angle, but making the weak points strong is the fun we get out of the game, and the idea worked out to a successful conclusion will be another step toward making motor truck logging an important and successful branch of the logging industry.

British Industries Fair in 1921

The three fairs, although held in different cities (London, Glasgow and Birmingham), are, in reality, only sections of one Fair, and together constitute the greatest Trade Fair in the world.

The London Fair is directly organized by the Imperial Department of Overseas Trade on behalf of the British Board of Trade, while the fairs in Birmingham and Glasgow are organized by the municipalities of the respective cities under the auspices and with the support of the British Board of Trade. An important point in the organization of the three fairs is that they are held practically concurrently, and that each fair represents a specified group of industries. No industry is permitted to exhibit at two fairs, and consequently the buyer knows that at whichever fair he may be visiting he will find the whole range of exhibitors in any particular trade or trades. Further, by careful arrangement of the dates of the sections it is made easy for him to visit all three should he wish to do so, for while the London and Birmingham Fairs run concurrently from the 21st February to the 4th March, the Glasgow exhibit opens a week later on the 28th February.

The British Industries Fairs are not exhibitions. They are trade fairs to which admittance is restricted to bona fide trade buyers seriously interested in the participating trades. Only British manufacturing firms are allowed to exhibit, and no exhibitor is permitted to exhibit goods other than those of his actual manufacture. The result is that buyers who visit the fair know that no articles shown on an exhibitor's stand can be purchased elsewhere in the fair. Exhibitors are also able to give proper attention to the buyer, and the buyer is able to do his business unhampered by crowds of sightseers.

Eastern Company Completes New Plant

The Piercey Supply Co., Limited, of Halifax, manufacturers and wholesale and retail dealers in building materials of all kinds, have erected a new plant on Robie St., which they expect soon to have in full operation. They have put up a splendid new office building which is practically completed. It is a two-storey one of frame construction, 35ft. x 75ft., and is laid out with the retail builders hardware department on the first floor, furnace room, order and shipping office, and the second floor is devoted almost exclusively to office accommodation. Here the various officials of the company are located and there is an employees' conference room as well as a large fireproof vault. While the building has its own hot water system, it will also be heated from the boilers of the manufacturing plant of the company by means of a convertor. In this way, while the heat will be generated by steam from the boilers, the convertor takes the place of the furnace for heating the water system of the office.

The company intend building an up-to-date dry kiln about 25ft. x 100ft. with a continuous monitor, for interior lighting purposes.

Found Western Stocks Very Low

Hugh A. Rose, of Rose-McLaurin, Ltd., wholesale lumber dealers, Toronto, returned recently from a business trip to British Columbia. While in the west he completed arrangements with the Prince Rupert Lumber Company of Prince Rupert, B.C., for his firm to act as their eastern representatives. The Prince Rupert Lumber Company operate probably the largest and best equipped mill on the coast which is engaged exclusively in cutting spruce. Mr. Rose visited nearly all of the large manufacturers in the Coast district and several in the Mountain district. He reports that he was surprised to find stocks of all kinds so low and, in spite of this condition, prices showing a tendency to ease off. The manufacturer, as usual, seemed to be looking to next month to bring in orders and was banking considerably upon a strong fall trade with the prairies as well as with Eastern Canada.

Your Employer and Loyal Service

By Addington Bruce

You have fallen, they tell me, into an unfortunate habit of railing and sneering at your employer. You describe him as arrogant, selfish, indifferent to your welfare, graspingly intent on grinding you down.

Luridly you refer to him as a bloodsucker, a parasite, an inhuman profiteer, an enemy to the workingman. Possibly he is all of these things. In that case I advise you to find another employer as quickly as you can.

But, you protest, all employers are alike. They differ only in degrees of greed or inhumanity. If that really is your belief, brother, I urge you to settle down and do some hard thinking.

At present, let me tell you plainly, you are blinded by prejudice and class hatred. You are in a dangerous frame of mind—dangerous particularly to yourself.

For it is a frame of mind that will deaden all your interest in your work, will cause you to work badly, hence will soon or late make it impossible for you to hold employment of any sort.

Whereas, by shifting the centre of your attention from your employer to your work, the chances are you will work so much better than the employer you now criticize will give you more responsible work to do, carrying with it more pay.

Unless he is a knave or a fool—and the average employer is neither a knave nor a fool—he is bound to treat you fairly if only from self-seeking motives.

He will not "keep you under" if you really are a first-class workman. On the contrary, he will steadily promote you, lest you justly become discontented and take a place elsewhere.

And, appreciating that it is to his interest to safeguard your efficiency by safeguarding your health, he will see to it that your working place is sanitary, and that you are not overworked.

If this is not the policy of the men for whom you now work, again I advise you to make a change.

But first be sure that the difficulty you now find in earning what you ought to earn is not chiefly your own fault.

Are you honestly trying to work efficiently? Are you rendering loyal service? Are you living healthfully when away from your work?

Retail Lumbermen Discuss Delivery Problems

Many Strongly Favor the Use of Motor Truck, which Adds to the Service and Efficiency of Retail Yard—How Representative Dealers View Question

In the last issue of the "Canada Lumberman" there appeared some interesting observations on the use, economy, service, investment in and upkeep of a motor truck for the average retail lumberman. Representative retailers in various parts of the country expressed their views on the problem, many of whom strongly endorse the advantages, efficiency and superior facilities afforded by a motor truck over the ordinary equine equipment. Others are not prepared to use the new method of transportation for various reasons which are fully outlined.

The opinions of dealers in various parts of the country will be read with much interest. In succeeding issues various phases of the delivery problem, which is one of the most important in connection with the operation of any retail lumber yard or planing mill, will be discussed. It will be the aim of the "Canada Lumberman" to present reliable, helpful articles that will appeal to all by their breadth and fairness.

Here is what several representative firms have to say on motor truck vs. horse delivery.

The Houston Co., of Tweed, Ont—We do not use a motor truck except to hire one for out of town deliveries, so cannot say anything about upkeep. The truck we hire is a Chevrolet 1½ ton. The owner is so well pleased with it after using it one season that he got a second truck of the same power and same make. We keep two teams constantly and during the sawing season we are using four teams. The reason we hesitate about purchasing a truck is because our yard is a swamp filled in with sawdust, and is too soft. However, between local and out of town delivery we could keep a truck fairly busy.

The Nicholson Lumber Co., of Burlington, Ont.—Although we have not kept our costs in detail we can give you a general idea of what our costs have run during the period of 19 months. For 19 months ending March 31st, 1920, the expenses per month of upkeep and operation ran about $135.00. The truck we use is a Ford, with a capacity of one and a half tons. We have found, however, that the tendency is to overload such a light type of truck, and consequently repairs amount to a great deal during a year. During this same period we used two single horses and the expense per month ran about $60.00.

Finds Trailers Decided Advantage.

J. P. Abel, Fortin, Limited, Maisonneuve (Montreal), Que.—We have now in use three motor trucks, two 1-ton Ford trucks, and one 1½-ton National truck, which are all equipped with trailers. We employ two Ford motors for delivery in our box factory, and the National truck for our lumber yard. This adoption of trailers has the great advantage, as they enable us to have all these trucks continually on the road, and there is no lost time in waiting for loading. The greatest advantage we find in using motor trucks is for long hauls. This also permits us to extend our trade, as we are in a position to give prompt service to all our customers either close to our plant or even outside city limits. Since we have employed motor trucks, we have done away with many horses and we expect to cut down altogether team hauling in future. Another reason we prefer to use motor trucks is the great difficulty we have had with labor which has been very scarce, and by using motor trucks we require, at least, 50 per cent less help than before.

McPherson & Clarke, Glencoe, Ont.—We do not use trucks, as our business is purely a farm trade, and they do their own teaming. We keep a couple of horses, but as we deal in coal also, and use them in the winter time, we find horses the more economical for our purpose on account of the heavy snow.

Frank A. Bowden & Sons, Limited, Toronto, Ont.—We have no heavy duty trucks, but have Ford and Fulton. Our experience of motor delivery to date has been that it helps us to enlarge our delivery area, and aids us to make rush deliveries, thereby covering convenience and service, but trucks are certainly not as economical or as reliable as horse delivery.

A. N. Whitman & Son, Canso, U.S.—We may say that we use a one-half ton Ford truck for delivery. The chief advantage over the horse is quickness, and economy when motor is not in use.

Mickle, Dyment & Son, Brantford, Ont.—We are at present using a Republic 2½-ton motor truck in our business.

Laird Bros., Dryden, Ont.—We do not use a truck, although we have given the matter some thought. As our streets are not paved and are made only of nature's soil, which in the winter, spring and fall seasons, are not suitable for motor trucking. In cities where the streets are mostly paved, the truck might possibly be of advantage, counting speed.

Chas. Hubbell, Thamesville, Ont.—We have been running a Ford truck since 1918, and find it very satisfactory. It is away ahead of a horse, in fact there is no comparison between a truck and team.

Gives Quicker and Better Service.

P. W. Gardiner & Son, Galt, Ont.—We use in connection with our retail yard, a Ford truck of 22.5 h.p., and 1-ton carrying capacity. We have a team to take care of heavy trucking of lumber in the yard, but for delivery purposes the truck gives much quicker and more satisfactory service. We certainly would not be without it for this purpose.

Nantel & Remillard, Montreal, Que.—We have only been in the lumber business for a few months and we cannot tell yet if we will ever use motor trucks. We are satisfied with horse delivery for the present.

T. Prefontaine & Cie., Montreal, Que.—We have not made use of motor trucks of any kind so far, as we firmly believe in horse delivery, for short haul, as being the most economical and still the best mode of delivery.

Eugene Murphy, Mount Forest, Ont.—I use a team in place of a motor truck. My reason for doing so is that the season during which a truck may be operated in this locality is too short. I would have to keep horses for such times as it was not possible to make use of a truck.

W. A. Hadley, of the S. Hadley Lumber Co., states that they have never used motor trucks in their business, but some time in the near future may give the proposition consideration.

O. T. Anderson, of Bury, Que., reports that he recently started mill operations and expects to do his work with horses yet awhile.

Loading Space of Twelve Feet.

Ball Planing Mill Co., of Barrie, state they recently purchased a 1½-ton Maxwell truck of standard design, and had an extension of 20 inches put on the frame, which gives them a loading space of 12 feet. This extension affords a greater wheel base, and so far has worked satisfactorily, as nearly all the load is carried on the hind wheels. The firm report they are able to place a greater load and recently put 2½ tons net on the truck and which went over a soggy road. The truck carried the load without any trouble, although the left hind wheel sank into the soft ground up to the hub. Goodycar tires (cord 5-in.) are used on the back wheels, and the same make 4½-in. cord on the front wheel.

Bamford Bros., of Listowel, Ont., say they do not use a truck, as it would be useless to them in the winter.

McElmon & Thompson, of Oxford, N.S., write that they have not used a truck in their lumber business, and do not think it would be a good thing, as the roads in the different places where they have been operating, are not adapted to heavy truck work. They are of the opinion that in the near future their province will have roads that will encourage lumbermen to put on motor trucks. The firm state they used motor trucks for delivery in their flour and feed business and like them O.K. They have one Overland model, ½-ton truck and also light Ford truck.

Does Not Own a Horse To-day.

John T. James, of Bridgeburg, Ont., says he is using a 1½-ton Federal and 1-ton Republic truck, the latter for lighter and quicker trips. He brings part of his manufactured stock ten miles from the mill to deliver in Bridgeburg, and finds the trucks very much better than horse vehicles. Just for a short time in heavy snow he cannot use them, but the period is generally not very long. Mr. James concludes: "I find trucks less cost to keep up and less cost to operate than horse or wagon. I believe that where the roads are good that motor trucks are the only economical way of delivery. One great advantage is in unloading cars. You can do it with less extra labor and much quicker." Mr. James says he does not own a horse to-day.

R. J. Miller, of Black Lands, N.B., reports that trucks are the right thing in the right place. While they may not take the place of horses all the time, he believes that in lots of cases, especially in a long haul, they are more servicetble, economical and satisfactory.

Gilmour & Hughson of Hull, Que., state that they do not use a truck in their business as the roads are too bad but they believe that where there is a pavement there can be no question about motor truck being the most economical means of service and delivery.

Paved Streets and Good Roads Required.

George N. Kernohan of the Kernohan Lumber Co., London, Ont., states that he does not use a truck for various reasons, the principal one of which is that a great many of the streets in that city and in the adjoining suburbs with which a large business is done, are not paved and a truck would be only of use in certain months of the year. Horses are available at all times and can do a great deal of work around the yard in the way of unloading from cars, etc., when not engaged in delivery. Mr. Kernohan believes that unless an experienced man is kept to drive the truck, the repair bill is bound to be very high. Considering that most of the hauls of his customers are short and that many streets would be practically impassable for a truck, he still adheres to the method of team haul.

C. M. Fitzgerald, Georgetown, P.E.I., says that he does not use motor trucks for the reason that his business is carried on principally by the lighter boats and vessels who handle all these supplies and make the most of his deliveries.

Flemming & Gibson, Juniper, N. B.—We purchased last year a tractor with which to haul hard and soft wood lumber from our mill here to Juniper Station on the Transcontinental, a distance of probably 2½ miles. We found the machine would haul a good load all right, probably equal to two pair of draft horses. The difficulty we found, however, was that the machine would not stand up to the work of hauling four times per day over a dirt road, the under parts, particularly the wheel bearings and track, went "west" on us in a very short time, and we were forced to believe that the horse was the most prudent and efficient means of hauling for us until the "tractor or motor truck" had passed the experimental stage. At this writing we do not believe they are anything but experiments in so far as practical and efficient industrial use is concerned.

Motor Trucks for Hauling Logs.

Adolph Lumber Co., Baynes Lake, B. C.—Over a year ago we decided to try motor trucks for logging purposes and after over a year's experience we have concluded that they can be used successfully for hauling logs. We are, at the present time, using two, five-ton "White" motor trucks, two five-ton "G. M. C." motor trucks and two three and a half ton "Republic" trucks. All of these trucks have given good service. We prefer the five-ton trucks to the lighter, as we believe that it pays to have the heaviest machinery possible for log hauling purposes. Two of our trucks have the chain drive, two of them worm gear drive and two of them internal gear drive. They have all proved successful, but we find that the chain drive is the most powerful and will give the best service in pulling a truck out of a hole. Of course it pays to make a good road for motor trucks just the same as it does for horse trucks or any other method used for hauling heavy loads. Good roads eliminate a large amount of the repair bills; they also save gasoline and oil and will mean the trucks making all their trips every day. We use the truck with a long wheel base as our logs are 12, 14, 16, 18 and 20 feet long, the largest percentage being 16 foot logs. We do not use a trailer of any kind. Our logs have been running eight logs to the 1,000 feet, and we have been hauling on an average of 2,000 feet per load. The length of our haul varies from three to four and a half miles and we were able to make from six to eight trips per day. We find that it takes less labor to handle our logging with motor trucks. It eliminates the use of men and teams and we really find it cheaper to haul logs with motor trucks than we formerly found it hauling logs with horse trucks. During last season it was so hot and dry that it was very difficult to keep up the roads and we have concluded that we would have been unable to handle our hauling with horses, and we were able to continue with our work when hauling with motor trucks. We have not said anything about the cost per M. but might explain that at the present time we are hauling on an average of 3½ miles. We believe that we haul the logs at a cost of approximately $2.25 per M. Of course this price varies from time to time but this is a conservative estimate.

Big Factor in Public Favor.

The Vigars-Shear Lumber Co. of Port Arthur, of which G. F. Pearson is manager, thoroughly believe in the efficacy and advantages of a truck. They use a two-ton Gramm-Bernstein truck, and the cut in this page shows this vehicle loaded with 10,000 four-foot lath for delivery to a point about four miles distant from the Port Arthur yard of the company. The truck, which the Vigars Shear Lumber Co. have is specially arranged for delivery of forest products and has a lumber roll-off device which is operated entirely from the rear. With this equipment the company say they are enabled to unload a full load in a space of, approximately, three to five minutes. They consider this an important feature of the truck, although it does not show up in the truck. Continuing, they add: "Covering a period of several months, our experience has proved that having a truck service is of considerable advantage. While we feel that the cost per thousand of delivery is high on an average-length haul, there is no doubt that the cost is considerably reduced on deliveries made to points over two miles away from our yards. Outside of looking at the actual cost of operation, there is another point of view which

Two-ton Truck operated by Vigars-Shear Lumber Co., Port Arthur, Ont.

we feel should not be disregarded. The fact that your customer knows you have a truck for the delivery of his orders, should, no doubt, cause him to favor you with business that otherwise might be placed elsewhere, especially jobs which are somewhat removed from the source of supply. This, to our minds, is an important feature of an auto truck."

H. H. Johnston, Truro, N.S., thinks team is the best, except on exceptionally good roads. He has never used a motor truck himself but the whole question, in his opinion, depends upon good roads.

The Allen Lumber Co., of Waterloo, Que., assert that they have very little hauling to do, and all in light loads, and, therefore, they have no real use for them.

A. Duchemin & Co., of Charlottetown, P.E.I., do not use motor trucks. They find under their special conditions it pays to have their work carried out by hired truck service. If they ever again take up the question of their own delivery service, the firm report that it will be motors that will be used and nothing else.

Eastern Opinion is Divided.

C. E. Downey, of Curryville, N.B., writes: "We have not used any motor trucks, as our work is lumbering, and a considerable portion of it is carried out in the winter time. We have not tried anything but horses for this work. Possibly motor power might be employed during the summer months, provided the purchase price and upkeep will not be too great.

T. E. Pratt & Son, of St. Peters, P.E.I., state they always have used horses, and that motor trucks would be no use to them in that section of the country.

George Ives & Son, North Tryon, P.E.I., say that they will try out motor truck delivery in the near future, as they believe such a service would be far ahead of horses.

Rosemount Lumber Co., of Montreal, say they do not employ motor truck, and believe to-day that at the price of gasoline, oil and repairs, horses are safer and cheaper investments.

A. H. Morin, of Trois Pistoles, Que.—I have a motor truck of 1½ tons and I use this truck for the delivery of construction materials. As the result of the use of the motor truck and teams, I will say that for the deliveries of one mile or more distant it costs less than the teams, but for deliveries of a few blocks the delivery by team is not so expensive and more satisfactory. I must say that the conditions of our autumn and spring roads oblige us to use teams, but during the beautiful season of summer we use the motor truck with saving of much time and money.

Many Customers are Pernickety.

M. P. Hogan's Sons of Charlottetown, P.E.I., in regard to the merits of motor truck vs. horse delivery, say:—We have never used a motor truck for delivering lumber. For fairly long hauls there is no doubt of the superiority of the motor truck over horse-drawn vehicles, but in a small city like Charlottetown we think the horse-drawn lumber wagon is to be preferred. The customer frequently requires only a small quantity of lumber; he has a narrow gangway

leading to his premises; he is not satisfied to have the lumber deposited on the street front. He demands that the teamster drive right in through the gang-way, so that the lumber will be placed immediately "under his nose." In fact the customer is sometimes so particular that the teamster often wonders if he will not be summoned to remain and help nail the boards on. If a number of houses were being built simultaneously in one quarter of the town and the lumber could be delivered in large quantities, no doubt the motor truck would win out, but where small quantities of lumber of different kinds are to be delivered here and there, we think the horse-drawn lumber wagon is to be preferred. One point we had almost overlooked—so much depends on the condition of the streets. With good streets and good roads the motor truck will, most certainly, deliver a large quantity of lumber in quick order. As to the question of cost, upkeep, etc., an ordinary lumber wagon drawn by a single horse means, in this place, an investment of $400.00. After six years' use, the horse is still saleable, the lumber wagon may be repaired at a comparatively small figure by mechanics who are not necessarily graduates of a technical school. Now a motor truck with perhaps no greater capacity than the one-horse lumber wagon, costs $2,400.00. In six years of continuous work the motor truck is ready for the scrap heap.

Gave Cypress Name of "The Wood Eternal"

Wm. Barratt, for the past five years manager of the Canada Lumber Co., Weston, which is retiring from business and disposing of its stock, has gone into the wholesale line on his own behalf, with offices at 316 Bloor St. West, Toronto.

Mr. Barratt is well-known to the trade, and has an active and thorough acquaintance with the industry. He came to Canada from the Old Country in 1902 and his first position was with Leishman, Maundrell & Co., afterwards the Woodstock Lumber & Mfg. Co. Mr. Barratt spent some time in their lumbering activities in Haliburton County, where the firm conducted an operation under the name of the Harcourt Lumber Co. Not only had he received a practical knowledge in the manufacturing end previous to coming to Canada, but he considerably widened his experience on arriving in the Dominion. After spending nearly three years with the Woodstock firm, he entered the service of the late Hon. Peter McLaren of Perth, who conducted mills at Blairmore, Alta, which Mr. Barratt managed. When the mills were sold Mr. Barratt returned to the east, having charge of the McLaren Lumber Co. of Brockville, Ont., for five years. In 1915 he came to Toronto to look after the interests of the Canada Lumber Co. which conducted both a wholesale and retail business.

Mr. Barratt, who will specialize in all kinds of wood, was one of the first men in Canada to handle red cypress. Some fifteen or sixteen years ago Frank Greenwood was the sales manager of the Cypress Selling Co., an organization composed of some thirty-two mills in Louisiana district. Cypress was brought to Ontario originally as competitor of white pine in the making of window sash, doors, frames, etc. Among the companies, who first gave it a trial, was the Woodstock Lumber & Mfg. Co., with which Mr. Barratt was then associated. Two mixed carloads were brought in in 1-in., 1½-in. and 2-in. in 1st and 2nd clears, and worked up in the mill. About that time Mr. Barratt was leaving on a trip to England, and was prevailed upon by Mr. Greenwood to try and push the sale of Louisiana red cypress overseas. Mr. Barratt had been in the employ of several Liverpool and other timber merchants, and when he landed in the seaport city there was being presented at many of the leading theatres in the Old Country a dramatization of Hall Cane's famous novel, "The Eternal City."

This naturally directed attention to Rome and among the paragraphs appearing in the press at the time, was one relating to the erection of new wrought-iron gates for the city, which had replaced the old wooden structure that had been standing for some nine hundred years. The dismantled gates were made of cypress and this wood had defied wear and strain for nine centuries. Its durability was widely referred to and more particularly so on account of it having been associated for such a long period with Rome, the Eternal City.

In describing cypress, Mr. Barratt made use of the happy phrase, "the wood eternal." It was a slogan that caught on," and was easily remembered. Others in the industry were pleased with its beauty and euphony and employed it frequently. Shortly after the Louisiana Red Cypress Association adopted this trade mark, which has done service ever since in all public announcements and literature.

It is not generally known in the lumber arena that Mr. Barratt was the father of the expression "the wood eternal." The distinction belongs to him and the one barrier has been his modesty in not annexing the honor of being the originator. The story is now related in the "Canada Lumberman" for the first time.

Stabilization Needed in Lumber Prices

Prominent American Lumberman Discusses Conditions and Expresses Hope Inflated Values are Over

Mr. W. M. Ritter, of the W. M. Ritter Lumber Co., Columbus, Ohio, accompanied by Mr. F. B. Pryor, his sales manager, spent a few days in Toronto recently on business. Mr. Ritter is one of the best-known hardwood lumber manufacturers in the United States, and this was his first visit to Canada. His company operate thirteen band mills, six planing mills and eleven flooring units, and the annual capacity is 130,000,000 feet. About 1,000,000 logs each year are cut into hardwood at the various sawmills of his company.

The mills are located in industrial villages, which have been built in the mountains in the heart of the forest, and in these villages Mr. Ritter states the company have other interests than their plants and lumber. There are good schools and churches which the company liberally support, in order that the best educational facilities may be afforded the children, Mr. Ritter's organization supplements the usual State grants so that the most efficient teachers may be employed. His company have also community clubhouses which they have built and turned over to the people. These clubhouses are fitted for entertainments of all kinds and have billiard parlors, bowling alleys and other community diversions. There are also provided in the various villages ball grounds, tennis courts and other conveniences for outdoor sports.

Mr. Ritter served during the war on the War Industries Board at Washington and rendered valuable service.

Speaking of the general business situation in the United States, he stated that not only in lumber but in all other commodities values had gone too high, and there was bound to be a halt in the ascension. The inflation of prices could not go on forever without some set-back. Such a condition of affairs was not a healthy one and the great danger was that when a recession set in it would, no doubt, swing too far the other way.

Wanted to Curb Runaway Market.

A little over a year ago Mr. Ritter, in conference with several lumbermen and other representatives of building materials, sought to check the constant inflation of quotations, not only in lumber but in glass, hardware, cement and other lines. At that time the demand was very keen and the interests affected seemed to believe that there was little or no danger of a turning of the tide. This had now come and the peak had been reached.

"I am," continued Mr. Ritter, "strongly in favor of stabilization of prices. I would not like to see them go back to the pre-war levels for many reasons. One is that our American dollar today has only about 50% of the purchasing power that it had before the war, and we have a heavy war debt to meet. If too low values are established, it will take too many years to liquidate our financial obligations. I am of the opinion that if an advance could be made of, say, 100% on the prices which prevailed before 1914, this would create a normal and stable condition. I do not only mean 100% so far as lumber is concerned, but 100% advance in wages and every other line. You know, however, that the percentage in many cases is much heavier than that, and I am rather apprehensive that if a strong demand develops in the spring for all kinds of building and other materials, that the same state of affairs will prevail as we witnessed a few months ago. It would be a cause of muddying the water a second time, and the result would be equally disastrous.

"There is a great shortage of building in my own and every other city, and thousands of houses must be erected. If market conditions should revive suddenly, we do not want a repetition of the artificial state of affairs which obtained some time ago, with prices running riot. It is too much like a dog chasing his tail and moving around in a circle. The present slow-up is, I believe, tending to help along readjustment in a most effective and substantial way, and once having gone through an unsound and artificial state, there is no reason, with the experience and insight which we gained during the past few months, why we should invite such conditions again.

"We are doing a moderate amount of business at the present time and naturally have curtailed production at a number of our plants, owing to decreased requisitions for forest products. The transportation situation is steadily improving and I look for business to revive rapidly next spring. With values more normal, construction should proceed on a scale that will in a measure relieve the present demand for houses. So far as our own plants are concerned, we have found our men generally more efficient than they were before the war. This has been brought about by co-operation with our superintendents and foremen and through them with the rank and file of our employees. We have sought to work with them to the fullest extent and see that they received a return commensurate with their industry. Our employees are contented and, the unit or standard of production, which we established in 1914, has been considerably increased by their united and individual effort."

Imperial Press Delegates Visit Big Mill

Between sixty and seventy of the Imperial Press delegates, who come from nearly every part of the Empire, recently visited the Hastings saw mill, Vancouver, the large plant of the British Columbia Mills Timber & Trading Company, and the mill that made B. C. Douglas fir famous.

Many members of the party had no doubt either seen or heard of the products of this well-known firm, which for over fifty years has been exporting the H. S. M. brand of masts, spars, and timbers of Douglas fir to every part of the world.

The British Columbia Mills Timber & Trading Company felt much pleasure in receiving a visit from such an influential and representative body of persons as the Imperial Press delegates, amongst whom were such personages as Viscount Burnham, proprietor of the London "Daily Telegraph." Sir Roderick Jones of Reuters, Sir

Imperial Press Party stands on Giant Fir Log over 100 feet long

Elmsley Carr, editor of "The News of the World," and Dr. E. T. Powell, editor of "The Financial News," London.

They were received by Mr. Eric W. Hamber, president of the company; Mr. Arthur J. Hendry, general superintendent, and Mr. J. Alex Hendry, secretary.

After the reception, patriotically embellished cards of welcome, on which were printed a few facts concerning the Hastings saw mill, and a leaflet of printed explanations relating to the different departments to be visited, were distributed amongst the guests.

The party under the guidance of Mr. Hamber, Mr. Arthur J. Hendry and Mr. J. Alex Hendry, then began their round of the plant. The drying-kilns were first visited, then the planing department, the log-pond, and log-slip. Here a giant log over 100 feet long was being drawn up into the mill, and the party, grouped on either side of it, was photographed.

The party then proceeded to the log-deck, where several giant logs were waiting their turn to be sawn. The delegates were much impressed by the ease with which these monsters were "handled" by the modern mechanical appliances. Then, on one side of the "deck," they watched the 60-inch circular saws "breaking down" the big logs, and on the opposite side the 14-inch band saw sawing timbers twenty-four inches square and over 100 feet long, and their being carried away by the live rolls.

Passing successively the second band saw, the edgers,, and through the grading, measuring, and tallying departments, the party proceeded to the end of the mill, where some fine timbers and spars for export to Australia, China and Japan, were to be seen. All the members of the party stood on one of these timbers—which measured twenty-four inches square and 100 feet long—while a photograph of them was taken. This squared timber was cut from the log the party had stood at the opposite end of the mill a few moments previously.

Lying on the wharves beyond the electric railway, which is used for distributing the lumber, were seen timbers and lumber of different sizes and grades ready for shipment to foreign countries.

The filing room was next visited. Here four band-saws, each measuring fourteen inches in width, and seventy-two feet in circumference, were being sharpened by mechanical means. A process that particularly interested the party was that of brazing two ends of the saw. A brazure was skilfully made by the chief filer, who explained to the party just how it is done.

Too much time having been taken up, up to this point, the party was unable to visit the picket, lath and broomhandle plant, and power house.

The visit having ended, the party returned to the entrance of the mill. On leaving Lord Burnham, on behalf of the members of the party, expressed to Mr. Hamber their pleasure at having had the opportunity of seeing a large modern saw mill in operation; and thanked him for all the arrangements that had been made for their visit.

Explains British Housing System

An interesting conference was given recently in the Y.M.C.A. Hall, Quebec, by Mrs. S. A. Barnett, of London, England, on the making of a home.

Mrs. Barnett spoke authoritatively on the subject as she has considerable experience in founding homes of various kinds. In 1905, this lady founded the Hampstead Garden suburbs, and is now director and honorary manager of Hampstead Garden suburb, and nearly 2,000 homes have been erected which accommodate some 10,000 people.

Mrs. Barnett explained this system and gave the result. The death rate is far lower than that of the slums. Mrs. Barnett gave interesting details such as what is required for a sanitary house and amused the audience by the low figures at which these houses can be rented. Six and six pence a week is the ordinary rental for a very comfortable workman's home in England, having a garden, bathroom, etc. Mrs. Barnett went on and compared two systems of building for the housing problem.

The first system is that of private initiative which is the best when those concerned in the building really want the good of the working class. The second is the company system—companies that build houses—for the industrials have one intention, that is making money, and the workmen's interests are completely put aside.

Mayor Samson, the Lord Bishop of Quebec, and many others were among those present.

Mrs. S. A. Barnett, C.B.E., has received the following letter from Her Majesty, Queen Mary:

"Buckingham Palace, July 9, 1920

To Dear Mrs. Barnett:

"Her Majesty desires me to tell you that she is much interested in your lecturing tour in Canada and wishes it every success. As you already know the Queen takes a personal interest in the housing question and hopes that the beautiful homes for all classes which you have inaugurated so successfully in the Hampstead Garden suburb may be adopted with great success in Canada.

"I have the warmest affection for that wonderful country where I spent six of the happiest years of my life.

"I feel sure that the Canadians will accord you a very hearty welcome. Believe me,

"Yours sincerely,

(Signed) "MARY MINTO."

W. F. V. Atkinson, who for eight years had charge of the forestry and hydraulic operations of the Spanish River Pulp & Paper Mills with headquarters at Sault Ste. Marie, has taken a responsible position with the Dryden Pulp & Paper Co., Dryden, Ont., where he will direct the woods and forestry department of the company. Mr. Atkinson has just entered upon his new duties.

Lumbermen Reply to Attack on Wooden Shingle

Take Issue With Statement Regarding Its Fire Hazard—Proposed Drastic Measure by Ontario Fire Prevention League Will be Strongly Opposed

The question of the fire hazard of the wooden shingle as compared with other kinds of roofing, has long been a subject of controversy. Various shingle agencies and lumber organizations have taken up the matter with some considerable vim and aggressiveness, and at times have replied pointedly to the criticism of insurance men and civic authorities.

"The wooden shingle" was recently made the object of an attack by J. B. Laidlaw, a Toronto insurance man, who addressed the Ontario Fire Prevention League in Toronto. He said there was hardly a day in Canada when someone's home was not destroyed or the roof burned off by the ignition of its own shingles from sparks. Mr. Laidlaw offered a resolution that no wooden shingles be allowed to be laid within fifty feet of an existing building, and this was endorsed by the gathering. It is said that the Ontario Fire Prevention League will endeavor to have such a legislation passed by the provincial legislature at its next session. How far this agitation will be carried, remains to be seen.

Lumber Organizations Take Up the Charge

The various Lumber Dealers' Associations are now taking issue with Mr. Laidlaw's statements and the matter will, likely, be discussed at the next meetings of these bodies.

Mr. H. Boultbee, Toronto, secretary of the Ontario Retail Lumber Dealers' Association, has produced several authoritative statements from actual tests regarding the fire hazard of shingles and from many reports in his possession quote statements to show that wooden shingles are less hazardous than prepared roofing. One of his authorities is B. L. Grondal, assistant professor of forestry of the University of Washington. Prof. Grondal, who made very extensive and scientific tests as to the resistance to fire of various kinds of roofing, sets forth the following conclusions:

1. "Roofings manufactured from paper containing rags, bark and similar combustible material should not be classed as fire resisting roofings, for they readily support combustion.

2. "Roofings saturated with asphalt or pitch burn very readily, and even though the paper base may be of non-combustible materials, fire is readily communicated to the sheathing below. Such roofings should, therefore, not be classed as fire-resisting.

3. "Untreated western red cedar shingles constitute a relatively low fire hazard and by the application of fire-proofing compounds they can be effectively rendered fire-resisting.

Prof. Grondal also declared in his report that "Frequent assertions by manufacturers of roofings designed to replace wooden shingles, that such 'patent' roofings afford protection from fire, while the western red cedar shingles presented abnormally dangerous fire hazard, have led many people to use such roofings under the impression that they were fire-proof. As fire records demonstrate rather conclusively that few fires originate through the ignition of wooden shingles by sparks, the claims of some of these manufacturers were investigated by students of the College of Forestry of the University several years ago and the discovery was made that any "pitch or asphalt saturated roofing paper" or fire-resisting" roofing would burn vigorously when lighted with an ordinary parlor match. It was found to be more difficult to ignite western red cedar shingles in a similar manner and they did not burn so rapidly.

Many Anti-Shingle By-laws Repealed.

"The report of the professor describes tests made with various kinds of roofing and justifies this conclusion," declares Secretary Boultbee, in a letter which he has sent out to the press. "The anti-shingle laws passed in several parts of the United States have been repealed as a result of scientific tests of roofing. Mr. Boultbee also states that he has many reports and records to show the advantage of shingle roofing against fire when compared with various prepared and so-called "fire-proof" roofings.

A leading builder in Toronto stated that a slate roof was far too expensive for a poor man to put on his house, and added, wooden shingles are warmer in winter and cooler in summer, and with the asbestos underneath which is required by law, they make the best all-round roof.

The National Lumber Manufacturers' Association some time ago issued a leaflet, presenting the arguments in defence of wooden shingles, which were given by G. E. Reynolds, vice-president of the Reynolds Lumber Co., before the municipal authorities of Albany, Ga., which effected a repeal of an Anti-Shingle Ordinance. Mr. Reynolds said in part:—

In Defence of Wooden Shingle.

"To begin, I wish to ask you to bear in mind that wood shingles have remained the universal roofing material on their record of service and economy through centuries in the past and without any defence in their behalf, and due to the fact that the majority of houses are covered with wood, every opportunity is afforded for discovering their faults. Such an opportunity has not been available to the substitutes, because of the limited use of these products. It is easy to secure reports selected to antagonize wood shingles. The success of the manufacturers of substitute or composition roofing is controlled by their ability to condemn wood shingles.

"Now a great deal of sensible argument can be presented on either side of any question, and it would be an endless task for you to try to arrive at a conclusion by considering the records of individual cities or towns.

"Thousands of dollars are spent every year by the National Board of Fire Underwriters to obtain a record from the various cities, states and the United States as a whole. These reports are condensed and given in simple form to show the various causes of the fire loss. You have had presented to you, however, the fire reports of certain selected cities, whose records happen to appear favorable to the argument condemning wood shingles, but these references are not conclusive.

Individual Records of Little Value.

"By selecting records of individual towns and cities, it is easy to find figures and conditions favorable to either side of the question. For instance, the manufacturers of wood shingles on the Pacific Coast prepared a pamphlet to combat the attacks of the composition roofing manufacturers, and by quoting the actual records of Minneapolis, Milwaukee and several other cities, it appeared that wood shingles were much less hazardous than any other kind of roofing material, but neither these statistics nor those presented by Mr. Brosnan are worthy of your consideration unless you will undertake to consider individually the records of every city in the United States. This would be an endless task and furthermore too many details are confusing.

"The National Board of Fire Underwriters' statement covers the entire field in a detailed and yet condensed form. I am confining my use of statistics to those published by this authority, as nearly as possible, because it will not be questioned by those who oppose wood shingles. This organization itself is a genuine enemy of wood shingles, as expressed in the reports, wherein they utilize their limited space devoted to comment, by stooping to the low plane of referring to the record of a single town for a single day to find statistics to justify criticism. Their report for a whole year covering a broad territory does not bear them out in this, regardless of their desire to the contrary."

What Fire Department Records Reveal.

"I understand that the records of the fire departments in each town and city are the basis for the statistics given out by the National Board of Fire Underwriters, and what does this report show? First, that the total fire loss in the United States for 1916 was $208,705,340.00, and only $7,355,047.00 was caused from sparks on roof. This 3½%, gentlemen, is the basis for all this agitation all over the country, while they are allowing to go practically unnoticed, a number of other hazards of which it is equally as practical to control by legislation and at the same time causing more loss than the sparks on roof, namely:

Defective chimneys and flues	$12,724,317.00
Stoves, furnaces and their pipes	11,204,875.00
Careless use of matches	7,136,181.00
Smoking (cigars, cigarettes and pipes)	8,588,375.00

"As the matter stands, we would be prosecuted for covering our homes with the most comfortable and economical roofing in existence, but we can allow every employee in our factories to smoke where he pleases and when he pleases, regardless of the fact that smoking is more hazardous than wood shingles. Two wrongs never did make a right, but why is it that wood shingles are singled out of this great list to be legislated against all over the country? It is simply due to the constant agitation that is promoted and kept alive by the various manufacturers of substitute roofing."

Mr. Oliver Elected as Grand Sire

Joseph Oliver, Toronto.

Joseph Oliver, head of the Oliver Lumber Co., Limited, Toronto, was recently honored at Boston, Mass., in a signal manner by the Sovereign Grand Lodge, Independent Order of Oddfellows, in being unanimously elected Grand Sire of the Order. Mr. Oliver has been Deputy Grand Sire for the past two years and that he was advanced to the highest position in the gift of the organization without opposition, speaks much for his activity and devotion to the three links. Only once previously has the dignity of Grand Sire been attained by a Canadian, and that was many years ago, by Dr. C. T. Campbell of London.

Mr. Oliver has long been a prominent citizen of Toronto, of which city he is a former mayor, and a former president of the Canadian National Exhibition. Twenty-seven years ago he was elected Grand Master of the Grand Lodge of Oddfellows for Ontario. In 1915 he was appointed Honorary Colonel of the Canadian Militia. Mr. Oliver also served for several terms as a school trustee, and is a leading member of the Masonic Order, the Orange Order and other bodies. He had resided in Toronto since 1855 and began his career as a carpenter. Working by the day, he forced his way up until he became a lumberman and eventually head of the wholesale lumber firm which bears his name.

The next annual meeting of the Sovereign Grand Lodge will be held in Toronto in September, 1921, when it is expected that about five hundred delegates will be present from various parts of the continent.

Grand Sire Joseph Oliver and General Commanding Dr. G. M. Hermiston, who recently at Boston were chosen for the highest offices in the gift of the Independent Order of Oddfellows, were lately the guests of a testimonial banquet held at the King Edward Hotel, Toronto. Both guests of the evening were presented with gold fountain pens, and Mrs. Oliver and Mrs. Hermiston with bouquets of roses.

Horoscope of Lumber Operations

The last issue of the Labor Gazette, of Ottawa, contains the following interesting review on general conditions in lumber operations in Canada from coast to coast:

Lumbering continued quiet during the month at Charlottetown. The sawmills and lumber booms round Fredericton gave employment to large staffs. A shortage of men was reported at Bathurst in every department of the lumbering industry. The sawmills in Quebec district were busy to capacity, with little prospect of finishing this season's cut unless the weather holds out late. Sherbrooke also reported activity in the lumber, tie and telegraph pole camps and in the saw and shingle mills. At Ottawa and Hull the sawmills were fully busy, and bushmen were in demand for the camps. Peterboro reported the completion of a big drive and another starting; saw, shingle and lath mills were busy. At Timmins a demand was reported for pulpwood cutters and at Pembroke for lumber mill workers and bushmen. Owen Sound reported activity in the sawmills, and camps busy on the north shore of Georgian Bay. The annual demand for bushmen started in Cobalt district, the season opening early, and for the pulp woods at Elk Lake; help was also called for at the sawmills. North Bay reported slack conditions in the labor market , but the opening of the lumber camps was expected soon to give relief. At Sault Ste. Marie lumbering operations, including pulpwood, ties, posts, saw-logs and hardwood, were very active, camps filling up as fast as men could be secured; the sawmills were busy, having some difficulty in securing enough labor in the yards as many men were away in the harvest fields. Port Arthur and Fort William reported a demand for men to stow pulpwood. Prince Albert and Edmonton reported a demand for bushmen and sawmill workers. Fernie reported some curtailment in the expansion of lumbering operations due to unfavorable market conditions, but the local mills operated to the capacity of a one shift day; in the south district some mills were obliged to close temporarily and sent out fire fighting crews. At Cranbrook, Nelson, Kamloops and Vernon fire-fighting crews caused some scarcity of labor at the mills. Vancouver reported a demand for men for the camps and sawmills. At New Westminster the saw and shingle mills had a very busy month. Loggers were in demand at Prince Rupert. Victoria reported all branches of the lumber industry active at Vancouver Island.

River Driver Gets Three Medals

An interesting ceremony took place at Niagara Falls, Ont., recently when William ("Red") Hill, a veteran riverman, was presented with the Royal Canadian Humane Society medal for life-saving. The unique feature about the presentation is that this is the third bronze medal of the society to be presented to Hill for life-saving.

Charles Black, president of the Humane Society, paid a tribute to Hill, and Mayor Stephens made the presentation. In an eloquent speech he recounted the feat for which Hill received the medal. On August 6, 1918, a scow with two men on board broke away at Chippawa, and was carried down the upper river, but stuck in the rapids. The life-saving crew from Youngstown arrived with their apparatus, and fired a line over the scow and finally got a basket midway out, when basket and rope became entangled in the rapids above the Horseshoe Falls. Hill volunteered and went out in the rapids and along the line, and at imminent risk of life and limb, untangled the line and brought it to shore, after which the men were brought safely to shore.

Hill's first medal was received when he rescued his sister from the ruins of a burning house, and the second for life-saving at the time of the breaking of the ice bridge here.

Hill is the only man in the British Empire to be awarded three bronze medals.

New Features in Asphalt Roofings

It has recently been announced that The Beaver Company, Ltd., in their broad policy of manufacturing and merchandising Beaver Board and allied building materials, is to offer for the first time the distinctive and patented features of Vulcanite Asphalt Roofing as a "Beaver Quality" product.

The demand in the past few years for asphalt roofings has greatly increased due to their durable and fire-resisting qualities. Especially in the case of asphalt shingles with their protected surface of crushed slate in natural non-fading colors which give beautiful and lasting results, are asphalt roofings today winning the favor of builders.

Vulcanite built up a most enviable record in the roofing industry in Great Britain (where it was first manufactured in 1876), on the Continent and in the United States. The outstanding features of this new Vulcanite proposition are the patented self-spacing shingles, the protective hexagon slab shingles, and the characteristic Beaver advertising campaigns and dealer helps in promoting sales.

A modern and completely equipped plant is now operating at Ottawa for manufacturing Vulcanite quality roll roofings and asphalt shingles in Canada. The sales offices of The Beaver Company, Ltd., are at Thorold, Ontario, and convenient distributing points are being established as quickly as possible throughout the Dominion. Arrangements are being completed to make Vulcanite one of the best and biggest roofing propositions for dealers in the country.

Will Sawdust Become Cow Feed?

When the dairy farmer of the future needs feed for his cows he may get a fresh supply by going out in his wood lot and reducing a few stumps to sawdust. By chemical treatment hydrolyzed sawdust may be converted into a nurishing cattle food.

The fact was brought out recently at the sectional meeting of industrial and engineering chemists, American Chemical Society, at the University of Chicago. The process of preparing such animal food was described by E. C. Sherrard and G. W. Blanco.

While sawdust, finely ground, is treated under steam pressure with diluted sulphuric acid in a large boiler, known as a digestor. This breaks up the fibre and extracts the sugar. To prevent injurious effects, the acid is neutralized by adding lime to produce chemical action. The liquid thus obtained, when boiled down, is rich in sugar, and, when mixed with the fibre, produces a moist feed containing about 15 per cent. of water, in which form it is fed to dairy cows.

At the Forest Products Laboratory, United States Department of Agriculture, Madison, Wis., experiments proved that three cows thrived on this sawdust ration, and not only gave more milk, but increased in weight.

The result was so satisfactory that the Government has decided to take up the matter on a larger scale at the experiment stations throughout the country and furnish a detailed report on the value of hydrolyzed sawdust as cattle food.

Sudden Death of Sir James Ball

The late Sir James Ball, London, Eng.

Many friends in Canadian lumber circles will learn with extreme regret of the sudden death of Sir James Ball, late Controller of Timber Supplies for the British Government during the war. Sir James spent several weeks in Canada in the early months of 1919 in his official capacity, being accompanied by Montague L. Meyer, British Timber Purchaser. He visited all parts of the Dominion and came in contact with representative lumbermen of very province, particularly those doing an export business. Sir James, who was chief engineer of the London, Brighton & South Coast Railway, expired at Forest Row, Sussex, on September 10th, where he was spending the day with Sir Wm. Forbes, general manager of the line. After a round on the golf links, he returned to the house and immediately complained of faintness, passing away a few minutes later. On the previous day he was at work in the London Bridge office.

Sir James, who was born in 1867, entered the service of the Great Northern Railway in 1890, and afterwards became engineer to the Lancashire, Derbyshire and East Coast Railway. In 1907 he went to the Great Central Railway as new works engineer, and five years later became engineer-in-chief of that company. Since 1917 he had been chief engineer of the London, Brighton and South Coast Railway, but during the latter part of the war he acted as Controller of Timber Supplies for the Board of Trade. In that capacity he did much to place the timber resources of the country on an organized basis, and his valuable services were rewarded with a knighthood. He was also responsible for designing and carrying out heavy railway and dock works, including the great Immingham dock on the Humber. He leaves a wife and one son. The funeral took place at Hampstead Cemetery, the various railway companies with which Sir James had been professionally connected being represented, as were also the Institute of Civil Engineers, the Timber Trade Federation, the London Timber Exchange, and other public bodies with which he had been associated.

Farmers Are the Biggest Wood Users

"Agriculture is the greatest wood using industry of the United States," said Col. W. B. Greeley, Forester, recently. "Forty-six per cent. of all the wood which the country consumes annually is used on its farms. The yearly lumber bill for farm structures and improvements aggregates 6¾ billion board feet. Farm improvements for boxes, barrels, and other articles manufactured from wood call for nearly four billion board feet additional each year. Add to these requirements the 80 million cords of fuel wood consumed annually by farmers and over a billion cubic feet of fencing material and it is easily seen that farmers have a greater interest in an assured supply of timber at reasonable prices than any other class of American citizens.

"The farmer is the most independent of anyone in the nation when it comes to food. He might be equally independent in the matter of timber. He owns, in the aggregate, more forest land than the lumbermen and all other private owners combined. Farm woodlots, or woodlands, reach the enormous total of 191 million acres and comprise two-fifths of the forest area of the United States.

Small Mailing List Better than None

It is much better for a retail lumber dealer to have a mailing list of fifty names of whose building needs the dealer has personal knowledge, than a miscellaneous list of several times that number copied from a telephone directory, says the Long-Bell Bulletin. A circular letter is something like a conversation. You wouldn't talk about a garage or a new barn or an implement shed to a farmer until you had found out he needed a garage or a new barn or an implement shed. When you send out a circular letter on one kind of building, be sure you know it is going only to those prospects who should be in the market for that building.

Right now is a good time to begin advertising, writing letters and making personal appeals on implement sheds. The large crops this year stimulated implement sales, and these implements should be housed over winter. No doubt by making a trip or two and otherwise inquiring you would find a number of farmers who will need sheds. Encourage these prospects with newspaper advertising, and then follow with circular letters to the livest prospects.

Nearly All Housing Loans Taken Up

More than 300 dwellings will have been constructed throughout Canada under the housing scheme by the end of the season, and in some parts, where the climate permits, operations will go ahead in the winter, according to advices received from Ottawa.

In the early part of the year plan was not availed of as readily as had been expected. This was attributed to its not being understood properly, and also to shortage of labor and materials.

Experience has shown the desirability of some changes in the legislation to suit different localities, and these will be made at the next session so that greater progress is expected next year.

Supplemented by the provinces, the Federal Government appropriatd $25,000,000, to be loaned to the provinces at 5 per cent., and nearly all of it has been taken up. In Ontario, federal and provincial appropriations for the purpose aggregate about $11,000,000.

Western Lumber Situation is Interesting

According to reports received in the East the situation in connection with British Columbia stocks in Ontario is still the subject of much interest. There is apparently no uniformity of opinion as yet as to how the Western mills will handle the new state of affairs created by the freight rate advances. It is generally reported that Western mills have low stocks at present, and that few of them can quote on any varied bills. At the same time most of them seem to have one or two lines each on which they are ready to accept a little lower prices than the other mills. Under these conditions the possibility of the Western mills placing the increased freight rates upon the consumer are not bright.

Prairie conditions at present are interesting and may be expected to influence trade in Eastern Canada to some extent. Outstanding accounts of the lumber yards on the Prairies are reported to have reached pretty considerable figures; so that many of the dealers feel that their most important business for the next few months will be collecting rather than selling. They have allowed their stocks to decrease to a minimum, and are buying only from hand to mouth. When the Fall collections have been gathered in, the yards in the Prairies may be expected to stock up for Spring trade, and unless the mills in B.C. accumulate larger stocks than they have now, there is a possibility that another active and profitable trade, as was the case a year ago, may be witnessed. No one expects, however, that prices will make advances at all commensurate with those of last winter.

The labor situation at the coast is still one of the strong determining factors in connection with prices. If the manufacturer continues to pay the present prices for logs, and the cost of manufacturing is not lowered, he will find it increasingly difficult to sell lumber on the basis of present prices.

Tide water mills in British Columbia, which are in a position to cater to the export trade, report that they have plenty of orders ahead for export at good prices.

The Creed of Wholesale Dealer

Here is the way one wholesale lumber dealer puts the view he holds, in a circular issued to the trade—you can gather that he is located in the mid-west states:

"We believe that the old method of doing business with the mills is passing away. The idea that the manufacturer must be kept in the dark as to conditions and that he must be discouraged into cutting his price to allow the wholesaler a profit, has gone into the discard. We believe that if the wholesaler renders the service which justifies his existence, that when the mills are making money, we can make money. Naturally then we are boosters when conditions justify; and yet we shall not hesitate to tell you unpleasant truths when they are necessary. We are trying to spread the gospel of west coast lumber throughout the middle west. We believe that it is the future wood for this territory and we are trying to make it the present wood. Every good car of west coast lumber which is shipped into our territory is a boost for us no matter who ships it. But we surely have the axe out for the man who ships a bad one. Every mill man should realize that every car which goes out from his plant carries as a part of its cargo a portion of the future of the fir market. A good car may make a man a good fir customer for life and a poor one can more easily turn him away."

His Specialty is Wood Using Statistics

R. G. Lewis, Ottawa, Ont.

R. G. Lewis, Dominion Statistician of the Forestry Branch, Ottawa, occupies an important and yet somewhat unique position in connection with forest products tabulation in Canada. His duties as Forestry Statistician consist in co-operation with the Dominion Burea u of Statistics in the collection, compilation and publication of statistics relating to forest products. This work at present covers the production of lumber, lath, shingles, pulpwood, pulp and paper, planing mill products and some of the more important wood-using industries. The figures for these are collected annually and published in bulletin form.

Mr. Lewis is a graduate of the Faculty of Forestry of the Toronto University and for the past eight years has been acting as statistician for the Forestry Branch in Canada's capital city with the exception of two years, when he was on active service. Fifteen months of this time was spent in France as technical officer of the Canadian Forestry Corps.

Mr. Lewis states that, in connection with the wood-using industries, arrangements are now being completed for a renewal of the wood-using industries studies which were made by the Forestry Branch from 1911 to 1916. The work was interrupted by the war and it is gratifying to learn that it is likely to be resumed. During the five years that it was in progress, the Dominion was covered by a series of studies of the industries using wood as a raw material. It was intended to study each of the five regions—the Maritime provinces, the prairie provinces, Quebec, Ontario and British Columbia once every five years and to have each study explained by a published bulletin except in the case of British Columbia. It is understood that this investigation will be continued this year by a study of conditions in Ontario, undertaken in co-operation with the Bureau of Statistics.

Present Lumber Prices Not Too High

The John Carew Lumber Co., of Lindsay, Ont., have finished sawing operations for the season. Owing to repairs of the lock at Bobcaygeon, it was impossible for the firm to bring anything in the timber line up from the lower locks until August 1st. The company are putting in three camps below Bobcaygeon, and have also purchased several pieces of timber up the other route, and will have, probably, three camps more, making six in all. The firm state it is costing more and more all the time for operating expenses, and the efficiency of men is only about 60 per cent. of what it should be, and they cannot possibly see how lumber will be any cheaper. Labor seems plentiful enough in the Lindsay district, but it is impossible to get men to work steadily, and they do not turn out their full capacity even when they are employed.

Will Use Poplars Along Lake Front

Toronto's Parks Department has planted 4,487 trees upon the city's streets during the season just ended, a record which has not been exceeded since before the war. They are chiefly Norway maples and American elms, with a few ash.

A despatch from New York indicates that chestnut trees are being discarded there for street use, because they cannot stand the gases from motor cars. "We long ago abandoned the chestnut," said Parks Commissioner Chambers to-day. "It is a pest-breeder, short-lived, and its foliage litters the streets.

Mr. Chambers announced that Lombardy poplars—sometimes called the "exclamation mark" among trees—will be used along the new boulevard to the Humber River, including the Exhibition waterfront.

Hardwood Bush Brought Good Price

At the sale of the W. H. Woods estate, at Bayfield, Ont.., J. E. Baechler, of the Goderich Manufacturing Co., Goderich purchased a property of 123 acres, including ninety acres of hardwood bush, at a price of $28,100. A parcel of 103 acres with the buildings thereon was purchased by Thos. McCurdy, of Stratford, for $5,700.

The property purchased by Mr. Baechler is on the Lake road a mile and a half south of Bayfield. Mr. Baechler intends to start taking out some of the timber about the first of December.

To bring this timber to the mill in Goderich Mr. Baechler will have two big motor trucks, which he has purchased from the National Steel Corporation of Hamilton. These trucks travel easily twelve miles an hour and are calculated to do the work of about eight teams of horses.

A few days before the Woods sale Mr. Baechlor bought fifty acres of bush in Warwick township, county of Lambton.

In the spring Mr. Baechler proposes to rebuild his factory, if suitable arrangements can be made with the town. His plan is to go extensively into the manufacture of boxes and baskets.

First Timber Limit From Premier Drury

Recently a charter was granted to the Pembroke Timber, Tie & Pulp Co., Limited, with head office in Pembroke, Ont., to manufacture and deal in lumber, ties and pulpwood. The mills of the company will be located at Makwa on the C.N. Railway. W. H. Bromley, who is the manager of the new organization, is well-known to the trade, and, previous to the war, was engaged in the wholesale line. He served three years overseas with the Canadian Forestry Corps. Another member is Major A. J. Miller, who was Officer commanding of a Forestry company in France, and is now engaged in the milling trade in Pembroke. J. S. Fraser of Pembroke is president of the company and L. M. Chapman secretary-treasurer.

The Pembroke Timber, Tie & Pulp Co. is composed of local men who have been more or less identified with lumbering for a number of years, and the purpose of the charter, as already stated, is to conduct a general lumbering business. The company have secured from the Ontario Government the township of Champagne, and will operate mills and manufacture timber, lumber, ties, pulpwood and piling. Commencing next spring, the company will turn out the best grades of white pine and they have already secured some big contracts for early spring cutting. The company will also be in a position to furnish dimension sizes and long piling. Their industries will be located on the main line of the Canadian National Railway. It is understood that the Pembroke concern is the first one in the Province of Ontario to secure a timber limit from the Drury Government.

The Value of Timber By-Products

That the by-products of the saw mill will outvalue in the near future the finished lumber is the prediction of a Western timber authority as quoted in a recent issue of the Literary Digest.

"Only 40 per cent. of our cut timber is utilized; the rest is thrown away. This means that the unused 60 per cent. is in such shape that it would not pay to use it. The problem of utilizing waste material," says this authority, "is that of making its utilization profitable." The enhanced value of timber to-day is making profitable the conversion of waste into merchantable products. Alcohol, tanning extracts, turpentine, pine-oils, fiber for rugs, carpets, bags and all sorts of fabrics, imitation leather, linoleums, insulating materials, these are a few of the products obtainable from sawmill waste, which was formerly thrown away.

It has been predicted that the by-product distillates of wood, as wood and grain alcohol, may sometimes equal other sawmill products in value. Grain alcohol may be produced from any wood at relatively low cost, and by a process that yields other products of value as well. This may become a substitute for oil and gasoline in the operation of engines for automobiles and automotive machinery.

Tanning extracts are made mostly from the bark of oak and hemlock. Turpentine comes from woods possessing necessary resinous content. In fact, practically every wood possesses important by-product possibilities that may be greatly increased by chemical experts.

As chemical investigations advance, and new uses are found for wood waste, the percentage of waste will be steadily cut down.

Death of Mr. Arthur G. Campion

The death occurred on October 1st at Montreal, of Mr. Arthur George Campion, a well-known figure in the local paper trade.

The late Mr. Campion was born at Sittingbourne, Kent, England, fifty-five years ago, and came to America about twenty years ago, when he was New York representative for Edward Lloyd, Limited.

Between 1905 and 1915, he was sales manager of the Belgo-Canadian Paper Company. In 1915, the late Mr. Campion went into business for himself under the name of A. G. Campion, Limited, with offices at 145 St. James Street, Montreal. He specialized in newsprint, and was well-known among Montreal publishing firms.

Learning is frequently a drug on the market, while doing always finds ready buyers.

Business and Pleasure in Sweden

By Anton Selander, F.E., Montreal

Anton Selander, Montreal

When the first two weeks were passed in June we boys began to be very nervous.

Anders, the old man's cook, coachman, valet and so forth was called in conference in regard to the prospective journey to Snurrevallen up in the north of Sweden.

Now, Anders was a person that knew exactly what the old man wanted, having been in his service for over thirty years.

We boys were not called on, so we just waited to hear the result of the conference.

Later the old man told us that it was decided to go up to the mountains to look over some timber that the government offered for sale and that after looking over the timber lots, we should go up to Snurrevallen to fish for trout and greyling for three weeks and stay at our club.

A specification of provisions and wets were made out, and four guides were sent up at once to overhaul the boats.

These boats are made similar to a canoe but somewhat larger, are very light and can easily be poled up stream.

They are made of half inch thick pine and painted outside and inside.

Our flotilla was red outside and white inside.

Oars were used to propel the boat forward except in going up rapids when the boat was poled.

In the forend was a block with a rope about three hundred feet long and the end of the rope was attached to a stone used as an anchor in the rapids.

On the 26th of June we took the train from Avesta to Insjon, a journey of three hours, and then the boat, a fine boat where you could get a meal and drinks as good as any hotel in the old world.

As soon as the dinner bell rang on the boat we boys were at it hungry as wolves as boys always are.

The boat traversed Lake Siljan, a beautiful lake fifty miles long, and along the shores, embedded in pine forests, were many very old historical places such as Laksand, where all natives still go dressed in their national dresses, and also in Rattvik, a place I spoke of in a previous article.

Six miles from the end of the lake is Solleron, an island six miles long and a parish in itself, well built and prosperous surrounded with sand beach and clear water, a spot that would touch the loveliest imagination.

We stopped there to take on and leave off some freight and passengers, and then off for Mora, where Gustavus Vasa, well known in Swedish history as the first great King, who inspired the Darlkarls to come with him and fight the Danes, and which King later freed the country forever from foreign conquerors.

There our boat trip ended and here was Anders, with a hack spanned with the old man's best driving horses, Sleipner and Blenda, and also two rigs with pack horses.

Everything we had was transferred to those rigs from the boat and after shaking hands with the captain, and thanking him for looking after our comfort so well, Anders whipped up the horses and we started for the mountains between Sweden and Norway.

After two miles travelling we reached Osterdalefven, where we had to be ferried across, but it was late in the evening and the ferryman lived on the other side of the river. We had to use all the power of our lungs for a good half hour before our friend, the ferryman, decided that "there was something doing" on the other side of the river, and after another half hour the ferry reached our side and we all embarked.

On the other side of Osterdalefven we passed through a small village, very old and very poor looking, and then we hit the bush.

The road was very sandy and all the time up hill until we come to a farm twelve miles higher up called Spjutmo, and there again through the bush all pine or, as the Swedish call, Tallskog, and the English, redwood. After another six miles we reached Garberg, a very small village in the woods.

A little creek with water clear as crystal followed the road for a mile, no shrubbery on the sides and you could see the trout (rainbow) behind small rocks.

But we had not gone far enough to allow us to start and try the fly, so we went further and after another six miles we reached the first house in Elfdalen.

Imagine yourself to be with us and you will feel how grand and beautiful it was:

The forest opens and we found ourselves on a good road, one thousand feet above the river, with the land all cultivated, sloping gently down to the river and dotted here and there with pretty farm houses all painted red with white corners and verandas.

You could see the river for miles away, running north in curves, as a band of silver, and joined in some places by smaller streams coming down in cascades from the mountains.

There was not much pine except in the background, but we found the farms embedded in white birch.

We drove right up to the hotel and Mr. Braaten, the proprietor and a friend of the old man, arranged to give us the best house he could offer, including a bottle of Pomery extra sec.

Next morning about five o'clock was breakfast time. We boys felt it was too early, but what would be the use to protest.

The old man and Anders were already up and what was worse, Anders had orders from the old man to throw a tub of cold water over us, and we never could imagine what it was good for.

But such is a young fellow's luck sometimes.

Six miles further up we crossed the tributary of Osterdalefven and the road entered the woods.

Here were many small streams crossing the river, and if time would allow us we could have got trout in plenty everywhere, but the old man wanted first to see the timber, so on we went until we came to Asen, the last village for six miles.

More grand scenery; an open valley somewhat deeper than in Elfdalen, and looking across it you will see a waterfall on the other side from a tributary coming down in sheer drops eight hundred feet. Yes it was beautiful beyond description..

We stopped here for a while to look at nature, and the old man wanted to speak to Larsson, the Member of Parliament, and his old friend.

After a while we started again and immediately entered the pine forest down, down, down, a thousand feet in six miles, where we reached Osterdalefven and ferried over again, then up two thousand feet in eighteen miles, all pine forest and small streams, and came to an arm called Hollstugan, and there we stopped for a while to take to the bush to find out what the timber looked like that the Government was offering for sale on auction this fall.

Hollstugan is what you here call a homestead.

At the time we came there the land was not divided, and any man that broke soil and built a good house and raised cattle would later receive a certain amount of forest land with the timber on. He received this from the Government free of all fees, and with the right to dispose of it at his pleasure.

The farmer worked hard the first year, but tourists and work in the lumber camps helped him so he soon became prosperous, and when the Government divided the forest land this man got twelve hundred acres which he sold to a lumber company for two hundred kroner, $60,000.00.

We were all tired after a journey of one and a half days, cramped up as we were in buggies, so it was decided to take a day's rest.

At this place we met two guides, and our Uncle, this later

being the old man's bush manager for the northern districts.

As there was no more road suitable for horses to the timber limit, we had to pack our provisions in bags. The bags are made of Birchbark and are fitted with straps to hang over the shoulders.

After a tramp of a few hours we arrived on the spot where the Government had stamped the trees offered for sale, and the packs were loosened beside a small river called Unon.

A fire was started at once and Anders put potatoes on the fire and started to cut frying pans to be used for frying ham.

These frying pans were green spruce boughs about three feet long, pointed at one end. You hang the smoked ham on it, and hold it over the fire until fried to everyone's taste, and believe me, it is good.

Mother had made some soup which we warmed up and Anders finished up a bottle of snaps and a couple of Pilsnerbier and we had a meal that a king would envy.

The examination of the timber took us several days, and every evening after work was over we whipped the stream for trout and got plenty.

After our exploring for about a week the old man found he had enough material on which to base his estimate of value, when the sale was to be made, and we started back for Hollstugan.

In the meantime we had been away, a letter had arrived, saying that the boats were now in perfect condition.

Anders phoned up to the nearest village, forty miles away, and ordered a messenger to inform our guides that we should be at Snurrevallan next day.

Very early next morning we started off going north for twenty miles, where we came to another farm named Bunkris.

That is the first place in the northermost parish of Dalarne bordering on Norway, and here the forests are cut up in six miles squares by what is called parallels or clearings, thirty feet wide, going east and west, in straight lines and controls going north and south, and these lines are always kept clear of vegitation.

At Bunkris a parallel runs through and beside the parallel is a tower, a hundred feet high, and custom is that you go up and take a look at the mountains in Norway.

If there is much snow on them we know that the water will be high in the river for a long time.

We did not see much snow this time, and the weather was very warm, so we expected good fishing.

Lunch was ready for us when we came down from the tower, and so on again to "Per Anders," a little place, very poor, where they never had seen money, and all you can get is milk, butter and cheese.

No potatoes or vegetable grew there, as it is too frosty, and the soil is only a few inches deep except in places. Under the soil everywhere is sandstone.

Six miles more and we came to the end of our road.

There started the trail of six miles for Snurrevallan. The old man had made this trail, and we could use packhorses, so everything was loaded on the backs of the horses, and after two hours' march we arrived at Snurrevallan.

What happened at Snurrevallan I will tell you in another number if you like this.

Says Their Work Lessens Labor Agitators

The work of the Shantymen's Christian Association in lumbering, mining and construction camps of Canada and the United States has been carried on extensively during the past summer, especially in the East and in Northern Ontario, and has been shown to have a very salutary effect upon tendencies towards labor agitation, according to the Rev. Thomas Joplin, field secretary, who is in Montreal on his annual visit. The thirty missionaries of the organization tramped 7,000 miles during the past year, visited 740 camps and addressed in all 43,400 men, of whom 8,500 were foreigners and 7,000 French speaking. The association also made an attempt to help the lonely settlers with whom they came into contact in the wilder districts of this country.

In all camps where the men had spare time on their hands, it was found, said Mr. Joplin, that there was a marked tendency towards labor agitation but this he declared was less noticeable in those camps which received the regular visits of the missionaries than in others. He cited one instance of an extreme labor agitator who had been convicted of error through one of the missionaries and was now himself preparing to take up mission work in the camps of Western Canada.

The case of the lonely settler, Mr. Joplin described as most pitiful. The association workers, he said, had come into contact with some families who had had no visitors for five or six years and in some instances had arrived just in time to prevent the occurrence of suicides through loneliness.

The association carries on work in Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, British Columbia, Michigan, Minnesota, Wisconsin and among the coal miners in Kentucky.

Why Such Large Freight Tolls

J. H. Duthie, late of the MacDonald Lumber Co., Toronto, is writing for the press some interesting and forceful articles on the "Railways and the Board of Railway Commissioners," and in a recent reference on transportation tolls pointedly observes:

Cheap transportation is one of the most important factors in the progress and development of a country, and when the Dominion Government took over the Canadian Northern and Grand Trunk Railways, it was supposed that its object would be to provide a service adequate to the necessities of the country at the lowest possible cost. Instead, however, of doing so, it has accepted the advice of the men responsible for the failure to make those lines paying propositions, and decided to take from the consumers of Canada an additional sum approximately amounting to $300,000,000 per annum, without the slightest guarantee that the money will be used to better advantage than has been the case in the past.

At different periods the railways have been given permission to advance their transportation tolls, and in each case it was stated that the increase would be sufficient to place them in a good financial position, but the additional revenue received has been dissipated without any improvement in conditions.

With a Government in power at Ottawa ready to hand over to the railways, at any time it is asked for, an advance in rates, there is little incentive to practice economy in the operation of those lines, and the expense of management has grown with each increase in revenue.

It is nothing less than criminal to burden the people with the payment of millions of dollars per annum to enrich the coffers of a company like the Canadian Pacific Railway, which, only a year or two ago, had statements published in the press of the United States to the effect that it was absolutely independent of its bondholders, and was in a position to retire for cash every bond outstanding against the company.

So far as the Government controlled lines are concerned, their financial position is largely due to mismanagement, and, if the men who have been continued in charge of their operation and maintenance are unable to make them pay on the basis of the rates in effect prior to the 13th inst., they should be requested to step down and out and make way for those who can do so.

The plea for advanced rates was based on the extra expenses incurred through higher labor and material costs, figures on a market that is acknowledged to be abnormal. Do the men in charge of the railways believe that the present abnormal prices ruling for material will continue for any length of time?

By insisting upon advanced rates they are doing their utmost to maintain an abnormal market, but notwithstanding their efforts, prices will decline because of a falling demand, due to economy in buying on the part of the people.

Coal is one of the heaviest items of expense in railway operation. Does Mr. Hanna believe that the present abnormally high prices for steam coal will be maintained during the coming year? If he does, I shall be glad to put him in touch with those who will sign a contract for steam coal, for delivery between April 1, 1921, and April 1, 1922, at a figure much below present prices, and furnish bonds for the proper performance of the contract. The same thing is true of other material required for railway maintenance.

If Mr. Hanna and his confreres would bend their energies to reducing expenses there would not be any need for additional revenue. In the United States the railways were granted an increase in rates because of higher labor and material costs. To-day these railways are not essentially necessary for railroad operation. Now that the advance has become effective they are reducing their expenses. Why did they wait until the advance was given before practising economy in management, Was it because their expense sheets were padded in order to make a showing for an advance in rates?

Pulpwood and Its Varied Activities

Will Ontario Start Pulp Mill?

A plan for operating a pulp mill as a provincial enterprise has been receiving the serious consideration of the Ontario Cabinet for the past three months, it became known only yesterday. The establishment of such a plant as a publicly owned and operated concern is stated to be by no means improbable. According to the plan under consideration, the mill would be established in Nipigon district at some point to which power could be transmitted from the new Hydro-Electric power development plant at Nipigon Falls.

While neither the details of the plan nor the general policy has yet been decided upon, it would occasion no surprise in Government circles if a favorable conclusion was reached. The plan is unique in that it would be the first time an Ontario Government had ever undertaken the utilization of the province's pulp resources for the production of paper as a publicly-owned enterprise. If decided upon it is probable that the large timber limit in the district chosen will be set aside for the project.

The Nipigon Hydro-Electric plant will have a surplus of power available for some years. A Government-owned pulp mill, supporters of the idea argue, would furnish a good customer and the basis for a mutually satisfactory contract for power. Another important feature from the Government's standpoint is the results obtained in a plant of this nature would provide the means of ascertaining with far more definiteness than is now the case, what remuneration the province is entitled to in return for timber and pulp-wood concessions granted to private enterprises.

Will Get Pulpwood Supply From Quebec

A guarantee of an adequate supply of pulp wood for making its various lines of paper was assured recently when negotiations which have been pending for several months were concluded at Montreal by which the Hammermill Paper Company, or Erie, Pa., acquired the timber lands and equipment of the Matane Lumber and Development Company in the province of Quebec.

The deal includes sawmills, complete lumbering equipment, logging railroads, considerable development work already done, floating timber and 133,000 acres of heavily wooded spruce land. As the Matane Company had not yet operated very extensively, and had worked only for lumber, not for pulp wood, the tract is nearly all virgin timber.

The property is located on the lower central part of the Gaspe peninsula, south of the St. Lawrence and does not have riparian frontage on the main river, but is tapped by considerable reaches of the Matane and Cap Chat rivers. With the property the Hammermill Company acquired 13,000,000 feet of logs in the river which will likely be utilized at once. Officials of the company state that no plans have been made for immediately utilizing the standing timber.

Mr. Backus and Government Agree

The Ontario Government and the interests headed by E. W. Backus of Fort Frances, Ont., have come to an agreement regarding pulp limits and water power in the Lake of the Woods district.

According to the agreement the first step necessary for the Backus interests is to erect a mill at Kenora and develop the Lake of the Woods limits which they now hold. The only change in the old agreement concerning these limits is a clause where the Government doubles the fees on pulp-wood, and brings them up to the present standard. The Government also grants a lease to the Backus people of the water power at White Dog Rapids on the Winnipeg River, subject to such "rentals, reservations and conditions," as the Minister of Lands and Forests may deem in the public interest.

Mr. Backus, who is the owner of the Norman dam at the outlet of the Lake of the Woods, which is an essential work for the regulation of the level of the Lake of the Woods, consents, as a further term of the agreement, to submit to such regulations as to this dam as may be imposed by the Minister of Lands and Forests, says a summary of the agreement issued by the Government.

This is an exceedingly important concession to the Lake of the Woods Control Board and to the International Joint Commission on Waterways. The effect of the agreement, so far as the water power at White Dog Rapids is concerned, is to leave the Government in absolute control of the development and of the distribution of power.

On their part Mr. Backus and his companies agree that they will forthwith proceed with the erection at Kenora of the pulp and paper mills called for by their agreement of 1914, and that they will have one unit of the pulp mill of at least 50 tons daily capacity in operation not later than the first of October, 1921, and will continue construction work uninterruptedly until the mills mentioned in the agreement of 1914 shall be fully completed, subject to the direction of the Minister of Lands and Forests as to the erection of the paper mill."

The mill called for by the agreement of 1914 was a mill with an estimated daily capacity of 100 tons. There will be sufficient power at Kenora for the operation of a 50-ton unit and the intention is that the power from the White Dog Rapids shall be available by the time the second unit of the mill is ready for operation, by which time the English River limits will have been put up for tender.

"The agreement between Mr. Backus and his companies of the one part and the town of Kenora of the other part provides among other things for the erection of a pulp mill of at least 200 tons capacity at Kenora. In order to supply the material for such a mill the Crown agrees to offer at public competition the pulpwood and timber on an area comprising a part of the English River watershed, being substantially the area that was offered for competition but for which no tenders were received in 1915. The company on its part agrees, that it will tender for the said area in the terms of the condition of sale, one of which will be that the timber and pulp wood on the area will be manufactured at Kenora, and if the company's tender is accepted the companies undertake that they will enlarge their mills at Kenora to at least the capacity called for by their agreement with the town of Kenora and will also accept their present agreement with the Government as a satisfactory agreement within the meaning of the provisions of the agreement with the town of Kenora, which requires the town of Kenora to assist in securing from the Government additional timber for the operation of a pulp mill of 200-ton capacityy. The company also agrees to extend their pulp and paper mills beyond the capacity called for by their agreement with the town of Kenora, "as they may from time to time be required by the Minister of Lands and Forests so to do, having regard to the quantity of pulp wood that will be available for the said mills."

"Under the terms of the agreement between Mr. Backus and his companies of the one part and the town of Kenora of the other part, in addition to the requirements in respect of the pulp and paper mills, the company binds itself to place the sawmill in Kenora formerly operated and owned by the Rat Portage Lumber Company in running order so that operations will be resumed at that mill during the season of 1921.

"The companies also agree to purchase the power plant of the town of Kenora at the price of $335,000, and assume the liabilities of the town under its agreement with the Maple Leaf Flour Mills Company under which the town is furnishing power to that company at a heavy loss each year."

The Government have also made a stipulation that any portion of the newsprint produced must be available for sale to Canadian publishers at the instruction of the Government. The amount is left open, but the Government say they could order 100 per cent. to Canadian publishers under the agreement.

By their present limits and mills and the water-power privilege given by the Government the Backus interests are placed in a position of superiority in tendering on the English River limits. They will have their mills at Kenora when the limits are put up.

Only Fifty Years Pulpwood in Sight

The resolution of U. S. Senator Underwood, calling for the appointment of a Presidential Commission to visit Canada with a view to securing the abolition of the restrictions imposed upon the exportation of pulpwood from the Crown lands of several of the provinces, was brought about by organized agitation and paid propaganda, aided by various newspapers, who had been led to believe erroneously, that the restrictions complained of were responsible for the high price and insufficient supply of newsprint paper in the United States during the early part of 1919, said Edward Beck of Montreal, in a recent address in Toronto.

"Many Canadians have assumed that, with the failure of the Underwood resolution, the issue is a dead one and that nothing more will be heard about it," said Mr. Beck. "Such, however, is not the case. The interests which were instrumental in bringing about the agitation which resulted in the passage of the Underwood resolution are still actively at work. Perhaps they are encouraged by the knowledge that in all human probability the next occupant of the White House will be a newspaper publisher, who may, presumably, be ex-

pected to look at the subject more or less from a newspaper publisher's point of view."

Mr. Beck showed that the restrictions on the exportation of pulpwood were perfectly justifiable on national grounds and that, in spite of allegations to the contrary, they violate no contract and deprive no one of any duly acquired right.

"The chief argument of those who are challenging these regulations is that, it is alleged, they unlawfully abrogate vested rights and inflict upon the lessees heavy financial losses. They contend that the right to a renewal, specified in the licenses, is tantamount to a permanent grant, which cannot be affected by any regulations subsequently made. We, in Canada, maintain that the leases give the lessees no permanent rights, but are merely annual grants with the right to a renewal upon certain conditions being fulfilled, and that the right of regulation by the State is the first of these conditions. The Supreme Court of the United States itself has held that the State cannot contract away its powers of regulation.

"The real question at issue is not as to whether this material shall be available for the use of American consumers, but whether it shall go forth in the form of raw pulpwood or shall be put through at least one stage of manufacture in Canada.

"In considering the causes that have led to the present agitation for the opening up of Canada's Crown lands pulpwood areas to foreign exploitation, the question naturally arises as to why action has been delayed until this late day, after the regulations have been in effect for over a decade practically without opposition. The answer lies in the fact, abundantly evidenced, that American paper manufacturers have used up their commercial available pulpwood, especially in the eastern states, almost to the point of exhaustion, without making reasonable provision for its renewal, and so are confronted with the alternative of getting their raw material from Canada, or of transplanting their mills to the Pacific Coast, where large stands of pulpwood are said to be still available.

"It is on record," added Mr. Beck, "that the United States Congress is at last becoming aroused, and the initial steps have been taken which, if vigorously followed up, will ensure a permanent supply of wood in the future, and that without encroaching upon their neighbors' preserves.

"If," he said, "I have unduly stressed the plight of our neighbors as a result of their prodigal and unwise use of their forest resources, it is only for the purpose of bringing to your notice the condition of Canada."

He then went on to say that, even taking the most optimistic view, the pulpwood supplies in Quebec will not last more than 50 years unless steps are taken to replenish them. Ontario's supply is calculated to last 50 years, while New Brunswick has at present no more than a thirty-year supply. Although British Columbia still has a large supply of pulpwood, much of it is commercially inaccessible.

"Clearly," he concluded, "it is time for the Canadian Government to take action, for at present it is only individual firms who are enough interested in the situation to make any move whatever."

What Canada Can Learn From Scandinavia

Geo. F. Steele, manager of the Canadian Export Paper Co., Montreal, and J. A. Bothwell of the Brompton Pulp and Paper Co., East Angus, Que., recently returned from an extended business trip to Scandinavia. Mr. Steele speaks highly of the splendid system of forestry in Norway and Sweden and is of the opinion that Canada might well take a leaf out of their book for the protection and perpetuation of the forest resources of the Dominion.

In the light of what has happened, in large measure in the United States, where the timber situation, as Mr. Steele put it, has become pitiable, contrasted with the results of scientific forest husbandry, as he was able to view them, in these Scandinavian domains, where they have been husbanding the forests for 40 years, he characterized the methods pursued in Canada, as being calculated to bring about a bankruptcy of forestry resources, within a measurable time. In fact, he said, this was inevitable, unless some far-sighted policy of conservation were devised. And he considered it a statesmanlike move that a plan should be promulgated in Quebec, by which a delegation of experts would be commissioned to visit Norway, Sweden and Finland, in order that some immediate scheme might be evolved for the application of a scientific forest policy to this province.

Sweden is one of the largest exporters of sawn lumber in the world, and Mr. Steele was impressed by the array of great saw mills which line the shores of their navigable rivers. The pulp and paper industry is also heavily exercised in the country, and there are many new, up-to-date and efficient mills managed by technical men of the highest standing, and what Mr. Steele was specially impressed with was the number of new experiments being conducted for the improvement of the industry. It is conceded, he says, that Sweden can boast of the most highly trained corps of forest engineers in the world, many of whom are the product of their excellent universities, and their remarkable forestry school in Stockholm.

The care and intelligence displayed in the conduct of the forest and the cutting of the timber in Sweden is in marked contrast to that in vogue on this continent. The regulations governing selective cutting are carried on under the advice of a committee, appointed for each district, and next in authority comes the forestry department of each company who have full control in the selection of the timber to be cut by the operators. Sweden is the largest exporter in the world of raw materials for paper-making.

In Finland, Mr. Steele noticed, that there were several large modern pulp mills in course of erection, and that others were being projected. In common with other countries it experienced a shortage of coal, and he saw hundreds of thousands of cords of white birch wood to be used for industrial fuel in that country. In the handling of its output of pulp and paper, through one central agency or bureau, Finland has evolved an intelligent system. The chairman of this bureau is the Minister of Trade and Commerce for the country.

Splendid Limits May Change Hands

Senator O'Brien's limit, which is one of the largest in Canada and situated at the north end of Lake Nipissing near Des Quinze, waterfalls, is likely to come into possession of the Riordon Co. in the near future. Although confirmation of the deal is lacking, it is regarded as a very likely development. Toward this region of timber there is being extended the Mattawa branch of the C.P.R., and it is believed the Canadian Government will extend the Nipissing Central Railway from New Liskeard in the same direction. The limit is one of the biggest individual tracts of timber in the Dominion and covers 1,100 square miles. It is reported that the price paid will be $1,000,000. The Des Quinze waterpower is capable of producing from 100,000 to 250,000 h.p., so engineers estimate, when fully developed.

Quebec Province Aids Reforestation

"The Province of Quebec has offered to all holders of timber licences, free planting stock, with the privilege of deducting the cost of planting from the current annual stumpage dues as an incentive to reforestation. It has practically decided to limit the cut on its Crown lands to an amount equal to the current annual growth. Its aim is to put the pulp, paper and lumber industries on a firm basis and provide them with sustained yield of raw material. No one can deny that this is a wise and statesmanlike policy. The throwing open of its lands to the unrestricted export of unmanufactured pulpwood would go far to negative such a policy. American firms owning mills and timber lands in Quebec should in their own interests be the first to endorse and support the Government's policy."

Southern Woods for Pulp Production

The U. S. Forest Products Laboratory at Madison, Wis., has frequent requests for information concerning the suitability of various Southern woods for the manufacture of pulp and paper. In the South there are large stands of various species of pines including longleaf and shortleaf yellow pine, scrub, pitch, loblolly, etc. These woods are characterized by having a good fiber length. However, on account of their pitch content it is not believed that they can be reduced by either the sulphite or ground wood processes of pulping to a grade of pulp to compete commercially with that made from northern non-resinous, long fibered, coniferous woods, such as spruce, balsam or hemlock.

The various species of Southern pines can best be reduced by the sulphite, or kraft, process of pulping, and the resulting pulp utilized for the manufacture of kraft wrapping paper or high test container board. These pines can also be reduced by the soda process and the resulting pulp utilized in the manufacture of grades of paper in which sulphate pulp is ordinarily used. It is possible that further work will demonstrate the feasibility of pulping these pines by the sulphate process, bleaching the pulp to a satisfactory degree of white and mixing it with short fibered sulphate or soda pulp made from other southern woods, such as the gum woods, for the production of magazine, book, envelope, or lithograph papers. The yield of pulp by the soda and sulphate processes is less than 45 per cent.

The large stands of hardwoods occurring in the South consist in part of the various species of gum wood, cotton wood, sycamore, basswood, magnolia, willow, etc. All of these woods are short-fibered and, according to laboratory experience, can be most satisfactorily reduced by the soda and sulphate processes of pulping. This pulp, after admixture with a longer and stronger fibered stock, such as bleached spruce sulphite, or pine sulphate pulp, can be used for the production of book, envelope, or lithograph paper.

In view of the present abnormal situation no definite estimate

can be given as to the cost of a balanced pulp and paper mill as all cost figures available at the laboratory are based on pre-war conditions. It is the opinion of the laboratory men, however, that a balanced pulp and paper mill can not be erected at a cost less than $45,000 to $50,000 per ton capacity per day. Further, before a mill of this type is erected, a careful survey should be made of the economic factors, such as freight rates, markets, labor and living conditions, fuel, power and other factors upon which the financial success of the proposed undertaking depends.

Will Carry Pulpwood to Maine

It is announced by the St. John, N.B., office of the Canadian Government Merchant Marine that the steamer Canadian Sailor, which reached here last night, will be put on a regular service between this city and Portland, Maine, carrying pulpwood. It was said that Canadian pulpwood cannot be sent into the United States in Canadian cars, and foreign cars cannot be obtained, so recourse is had to the water route.

Contract for Big Cut of Pulpwood

F. J. Sensenbrenner, of Neenah, Wis., and S. A. Munday, of Bradford, Pa., president and vice-president of the Spruce Falls Company, and a party of directors recently paid a visit to the property to look over the work now being done on the construction of the new mill which it is expected will be in readiness to start operation in May next.

The company have let contracts for the cutting of 60,000 cords of pulpwood. The first unit of the mill, which will produce sulphite pulp, will be arranged for steam power, and after the plant is in operation, work will proceed on the big power dam, and then a groundwood pulp mill will be added. In time it is the intention to instal three newsprint machines which will give the company an output of 200 tons a day.

The directors were greatly pleased with the progress that has been made by the contractors, Fraser Brace & Co., Montreal, who have a large staff of men at work. The party left Kapuskasing, and after making a short stay at Cochrane, left to visit the plant of the Calder Pulp & Timber Co. at Burt, Ont.

Can Now Bleach the Papyrus

The supremacy of Canada and the Scandinavian countries in the pulp and paper industry may be challenged soon by the Belgian Congo. Papyrus, which grows in great abundance in the Congo, is to be exploited by a large company which has been granted a concession. It is planned to establish a large plant, costing two and a half million francs, which will have an initial production of 20,000 tons of this pulp.

The papyrus of the Congo has shown on analysis 37.8 per cent. of cellulose. After research and experiments, a process has been discovered for bleaching the plants. This had been vainly sought for fifty years. The papyrus grows principally along the lower Lualaba River, near the Lake of Kabuli. Sjemba, Kisali, and Noaga.

Heavy Pulpwood Cargoes for Portland

It is said that practically all the fleet of new steamers that were coming from the Great Lakes to the Atlantic Coast, have already come down the St. Lawrence River, and of these some four or five are known to be taking on pulpwood at various provincial ports for Portland. Quite a lot of pulpwood yet awaits shipment at Chatham, and Dalhousie, N.B., Gaspe, Botwood and other ports, and as all of these ports are likely to be open to navigation until well into November, it is more than likely that several outside boats will be chartered to come here wtih wood. One such charter has already been made, S. S. Garibaldi has been chartered to load pulpwood at a provincial port for Portland, and the engagement of several others at an early date is very probable.

Will Use Planes for Forest Patrol

Arrangements are being made between the Canadian Air Board and the Commission of Conservation for Ontario, the Department of Agriculture and the Chief Forest for New Brunswick to use airplanes and flying boats extensively next summer in the establishing and carrying out of forest fire patrols and the conveying of entomologists to ordinarily inaccessible places in search of spruce, budworms, etc.

Northern Ontario and Eastern Canada are obviously seaplane countries from an aeronautical standpoint, and services as well as patrols will form part of the project. Northern mining men are interested in a summer transportation scheme whereby flying boats will make certain trips conveying engineers, miners, mail, food and other necessary materials.

Following the prescribed courses over certain lakes and rivers, the flying boats would fly in the form of an oval up and down the line. In this way a straight 100-mile flight in the morning and return in the afternoon would patrol twice in the same day approximately 3,000 square miles or more according to atmosphere conditions and vision. Smoke blowing in the wind could be sighted up to an area of 6,000 square miles or more. Vision with the naked eye on a perfectly clear day at 20,000 feet is approximately 100 miles.

Substitute for Spruce in Pulp

"It has become axiomatic in the paper industry that there are no substitutes for spruce wood in making paper pulp," writes Harry A. Mount, in Popular Mechanics. "Thousands of dollars have been spent by manufacturers in an effort to find some material to replace the rapidly diminishing supply of spruce, without result. And so they have received with a great deal of skepticism the recent announcement that a satisfactory paper can be made from the saw grass of Florida, and that a practical method of production has been developed. Recently a company has been organized, however, and plans are now going forward for building a pulp mill with an initial capacity of 25 tons a day in the saw-grass belt.

"Engineers connected with the enterprise say that a preliminary survey reveals that there is in Florida nearly 6,000,000 acres of saw grass. This can be harvested twice a year, yielding 20 tons of paper per acre to each cutting. It would seem, therefore, that Florida might eventually furnish paper to the whole world, for it is claimed all grades of the commodity, from building papers and cardboard to the finest writing papers and vellums, can be made from the grass.

Spanish River Makes Makes Good Record

The common stock of the Spanish River Pulp & Paper Mills, was placed on a 7 per cent. basis at the annual meeting of shareholders held in Toronto recently.

The former were re-elected, and at a subsequent meeting of the board the following officers of the company were elected: President, George H. Mead; vice-presidents, P. B. Wilson, Thomas Gibson; secretary, J. G. Gibson; treasurer, A. H. Chitty.

A statement was given out as follows.

In the letter to stockholders of April 29th, 1920, dealing with the payment of all dividends in arrears on the preferred stock of the company the directors stated that it was confidently expected the earnings of the company would be sufficient to warrant the payment in cash

P. B. Wilson, Sault Ste. Marie, Ont.
Vice-president Spanish River Paper Mills.

of regular quarterly dividends on the total issue of preferred stock accruing from July 1st, 1920. The directors now take pleasure in announcing that at the meeting held just prior to the stockholders' meeting to-day the first quarterly dividend of 1¾ per cent. on the preferred stock was formerly declared, payable October 15th stockholders of record September 30th.

"The directors wish to further announce that after careful consideration it is felt that the company is warranted in likewise placing the common stock upon a cash dividend basis, and at the same meeting, held to-day, formal declaration was made of the first quarterly dividend on the outstanding common stock of 1¾ per cent. per annum, payable October 15th to stockholders of record September 30th."

Mr. Phillips Now Located in East

T. N. Phillips, Toronto.

"Tom" Phillips, who is now looking after the Ontario interests of Timms, Phillips & Co., Vancouver, B.C., with headquarters at 18 Toronto St., Toronto, has been associated with the lumber business all his life, and while he has won national fame as a hockey player, still his main purpose has been disposing of B. C. forest products.

Mr. Phillips was born in Kenora, when the C.P.R. was being constructed between Fort William and Winnipeg, his father being engaged on some of the most important contracts. This was in 1863. After attending the schools of Kenora and latterly McGill University for a couple of years, Mr. Phillips took a position with D. L. Mather, who was taking out a large quantity of ties at Vermillion Bay, fifty miles east of Kenora, and had a tie mill at this point. He started in by spending a season at river driving, and then went to work in the mill. His next position was with the Rat Portage Lumber Co., where he was engaged in both the sawmill and the planing mill. Later he went into the office, and afterwards devoted his attention to the selling end. After three years with this organization he decided to go further west, and on reaching Vancouver became associated with the Burley Lumber Co., with whom he remained for three years, both buying and selling. Subsequently Mr. Phillips became identified with the Imperial Timber Trading Co., and was a year and a half in the sales department. Herbert Timms and D. M. Colquhoun were also with this firm. In December, 1912, the three young men went into the wholesale line for themselves under the name of Timms, Phillips & Co., Limited, and have since conducted an extensive business all over Canada. The company have offices in Vancouver, Montreal and Toronto, and a buying branch in Nelson, which supervises the mountain mills, and a purchasing connection at Edmonton, which covers the mills along the G.T.P. They specialize in all lines of B.C. mountain and coast products, including Sitka spruce. The slogan of the firm is "Organized to Serve."

Mr. Phillips and family have taken up their residence at the Isabella Hotel, 556 Sherbourne St. He is no stranger to Toronto, which he has visited several times, and also attended business college in the Queen City some years ago.

Advises Watchful Waiting Attitude

Mr. John W. McClure, Memphis, Tenn., President of the National Wholesale Lumber Dealers' Association, recently returned from a several weeks' trip to Europe. In speaking of the lumber situation in the United Kingdom, Mr. McClure said:

"Conditions generally abroad are unsettled, disturbed and abnormal, politically, socially and commercially. The reactions from the restraints and intense efforts necessitated by war conditions have resulted in a reckless disregard of laws and government, especially on the part of the so-called working classes. Until these conditions adjust themselves and every man realizes that the old natural law of compensation, "an honest day's work for an honest day's pay" still governs and is still just as sure in its rewards and punishments as it has ever been in the history of human affairs, then will it become possible to guage the future with that degree of confidence which is necessary to the conduct of successful business.

"At the present time, the consumption of hardwoods abroad has reached a minimum which might almost be called nil. The supplies on hand are ample to take care of present requirements, although they might be considered small as compared with normal conditions. In other words, present stocks would be consumed within a few months under normal demand, but at present rate of consumption, are ample for as many years, if present conditions continue. No new commitments can be made with any certainty of the future. Conditions are entirely too unsettled to permit of speculation. Financial conditions are compelling a liquidation of stocks on hand rather than permitting an investment in supplies for the future. The volume of buying is very small and restricted to absolute necessity.

"Under such conditions prices are extremely sensitive to the slightest circumstances. Merchants are inclined to hold prices firm and would dislike to experience any sudden and radical declines. Many of them are holding their stocks rather than making concessions in price. However, the arrival of low quotations intended to force buying, or the efforts of brokers to force the sale of even two or three consignment shipments through reduced prices, causes much disturbance in the market and has a tendency to restrict buying rather than encourage it. In a general way, it may be said that buyers are very willing to pay ruling prices for what they must buy, but are not inclined to buy anything not actually needed, even at greatly reduced prices.

"The great difference in exchange and the fluctuations in the exchange rates are of course having a marked effect upon the lumber industry abroad. What little lumber is being consumed in United Kingdom markets is coming from stocks mostly imported before the big slump in sterling exchange. Although ruling prices compare favorably with market conditions at home based on normal rate of exchange, there is everywhere evident the peculiar condition of lumber being sold ex yard in United Kingdom ports at less than present replacement values when taking present exchange rates into consideration. This situation is bringing about a small movement of American hardwoods from United Kingdom ports back to America. Whether or not this movement will develop into important volume will of course depend upon the movement of the exchange rate and the comparative values prevalent on the two sides.

"The practice of consigning lumber abroad under present conditions is bringing disastrous results to shippers. It is amazing to find some of our best shippers still sending over consignments in the face of almost certain heavy losses. The reliable brokers abroad are doing everything possible to discourage consignments, but still they come, though in much smaller volume than formerly. In some cases, the brokers are refusing to advance against consignments and as a result, the lumber is left on the docks to consume its value in the heavy charges now current.

"It is impossible to make any predictions for the future with any confidence. Old precedents have gone into the discard. The term "normal" is an unknown quantity, and must be left for the future to determine. Whenever conditions come in which supply and demand are evenly balanced, a new "normal" will be established as a basis upon which the future can be reckoned. In the meantime disturbances and fluctuations in the market can be expected. There are many optimists over there who are looking for some improvement in conditions commencing in October with good prospects for next year. I feel inclined to accept this view. Much depends upon the attitude of American shippers. If they adopt the wiser course of withholding consignments, of quoting prices only upon direct inquiry and not attempting to force the market, it will help conditions wonderfully.

"Every disease creates its own toxine, and there is not wanting evidence that in Europe the toxins are beginning to stop the inroads of the disease. The remedy is work and whenever Europe gets back to work, there will be a great demand for American lumber which will insure a steady market at remunerative prices for a period of years. If American shippers could only adopt the "watchful waiting" attitude, watch for the development of these requirements when they come, but not to anticipate by shipping in advance of demand, the rewards will be certain.

"I personally visited only the principal United Kingdom markets, but I learned from lumbermen who had been to the Continent, that conditions there were much the same as in Great Britain. Whatever difference exists is in degree rather than in fundamentals."

New Atkins Buildings are About Complete

Like a number of other concerns, the plant of E. C. Atkins & Co., Indianapolis, Ind., manufacturers of silver steel saws, saw tools and machine knives became so crowded that it was necessary to build more buildings.

No sooner was the additional storey completed to the handle factory than a four-storey addition to the power plant and a three-storey building was started. The company needed more floor space to take care of the expansion of the different departments and the two new buildings will give them additional floor space of about 60,100 feet.

The first floor of the power plant building is to be used as an engine room from which they will generate their own electricity. In installing the engine and dynamo and in connecting with other buildings over six tons of copper cable will be used. The switch board will measure thirty feet, four inches by seven feet, six inches.

There are several things of interest in this new building, one being the construction. There are 45 ft. spans in this building without any posts, the weight being carried by thirty inch steel girders. Another interesting feature in the construction is the eight-ton crane which is built in for moving the heavy machinery. With it they can get a machine within a sixteenth of an inch of the place they want it.

The other three floors will be used for factory purposes, one for the cross-cut getting out department and the other two floors for hand saw packing. In the three-storey building the basement will be used as a grind stone cellar, one floor for cylinder saws and the other floors for narrow band saws.

Personal Paragraphs of Interest

Mr. Klinger of the Dock & Mill Co., North Tonawanda, N. Y., was a recent caller upon the trade in Toronto.

H. G. McCleary, of Philadelphia, Pa., representing the Union Lumber Co., Toronto, was a recent visitor to Toronto.

J. L. Campbell, of Campbell, Welsh & Paynes, Toronto, and family, recently spent a pleasant holiday in St. Catharines and the Niagara district.

John B. Reid, of Toronto, president of the Ontario Retail Lumber Dealers' Association, and Mrs. Reid, who have been spending the past month at Atlantic City, have returned home.

K. M. Brown, of Toronto, Eastern representative of the Vancouver Lumber Co., has returned from Minneapolis, where he was called a few days ago owing to the death of his father.

J. F. Wachter, who has been spending some time in the retail lumber operations and planing mill of Wm. Williamson, 601 Woodbine Ave., Toronto, has joined R. G. Chesbro, Toronto, as salesman, and will cover the Niagara district and other portions of western Ontario.

A. E. Clark, of Edward Clark & Sons, Toronto, was one of a large party of financiers, paper manufacturers and business men, who were recently the guests of the Riordon Pulp & Paper Co., and visited the company's large industrial undertakings at Hawkesbury, and later spent a day at the new Kipawa pulp plant, which represents the last word in sulphite pulp equipment and production.

Matthew Brown, of Toronto, Canadian representative of the Thomas Hall Lumber Co., Charleston, W. Va., recently joined the ranks of the benedicts and is receiving the congratulations of his friends in the industry. Mr. Brown was married at St. George's Church, Toronto, on October 2nd, to Mrs. Mary E. Foster, only daughter of the late Rev. Thos. and Mrs. Rixon. Mr. and Mrs. Brown have taken up their residence at 83 Neville Park Boulevard, Balmy Beach, Toronto.

D. G. Calvert, of Strathroy, Ont., has been appointed resident engineer of the Fort William Pulp & Paper Co. He will have charge of the construction and equipment of the plant on the Mission site, Fort William. Mr. Calvert is a graduate of Toronto University and served three years as assistant engineer for the Transcontinental Railway with headquarters at Cochrane. He then joined the Canadian Stewart Co. on the Toronto Harbor Improvement as office engineer. Next he was associated with the Mead & Talbot interests and has also held several other important positions.

Theo. A. Sparks, of Winnipeg, president of the Western Retail Lumbermen's Association, was in Toronto recently on a visit and called upon a number of firms in the lumber industry. He is spending a few days on a visit to various points in Ontario. Mr. Sparks is general manager of the Northern Lumber Co., Limited, who operate a large number of retail yards in the west and have their headquarters in Winnipeg. He is also sales manager of the Theo. A. Burrows Lumber Co. of Grandview, Man. Mr. Sparks speaks optimistically of the splendid harvest in the west and the promising outlook for good business not only in the lumber but in all other lines.

Free From Knot and Sap.

The square man is wun who mezzures the same each way and hain't got any winny edges nor cheap lumber in him. He is free from knots and sap and won't warp. He is klear stuff and I dunno care what you work him up into. He won't swell and he won't shrink. He is amongst men what good kiln-dried boards are amongst carpenters; he won't season-crack! It does not make any difference which side of him you come up to, he is the same bigness each way, and the only way to get at him ennyhow, is to face him. He knows he is square, and he never spends any time trying to prove it. The square man is one of the best-shaped men the world has ever produced; he is one of them kind of chunks that you kant alter tew fit a spot, but you must alter the spot tew fit him.—Josh Billings.

Southwestern Retail Dealers Meet

A meeting of the Southwestern Ontario Retail Lumber Dealers' Association was held on September 30th in Chatham. There was a representative attendance and A. R. Sanders of St. Thomas, president, presided. The time of the session was mostly taken up discussing the fact of the higher freight rates on the price of lumber, and it was reported that some wholesalers were selling and shipping lumber direct to contractors, especially in the London and Windsor districts. These matters were talked over and will be further considered at a general gathering to be held later. It was the general opinion that business conditions would be in a more settled state by November and that the Association would then be in a better position to tell how things were going.

Now is Good Time to Buy Lumber

The Rimouski Lumber Company, Limited, Rimouski, Que., of which J. H. Poulin is manager, writes the "Canada Lumberman" as follows:

Word has come to us of a reduction in the wholesale prices of lumber by American manufacturers of 20%; that every railroad siding in the South is piled high with lumber that cannot be moved at present prices, and that yards are very slow to put in any stocks.

This condition obtains almost in every part of North America, with the yardman buying only from day to day requirements, feeling positive of a great saving in money if he will only wait until the manufacturer becomes tired of holding out for a top price, or is forced to liquidate stocks to meet loan payments.

As we have said previously, there is no reason for a stampede to sell. Ford reduced the price of his cars, presumably to sell more Fords; but it is a question if he has not made another mistake.

If we can judge from the hundreds of enquiries coming into this office from all centres, which comprises the New England States, New York, Pennsylvania, Michigan, Ohio, New Jersey, and the Eastern Canadian provinces, there is really a demand for much lumber at present prices; but invariably orders come in with the request to rush, which substantiates our statement that the yards are living on daily stocks with nothing piled ahead.

It is a good time to buy. Prices are somewhat easier than they were some weeks ago, but there is no likelihood of their changing except to a renewed high level by December. Canadian manufacturers fearing a drop have curtailed their cuts some 65% under last year's cuts, and when the spring demand comes in for lumber, with not sufficient stock on hand to fill orders, there will be a repetition of this past spring's rush for lumber "at any price." If the retail man is putting up a little game of his own, he is fooling himself. Everybody is selling or wants to sell now. Our advice to the consumer or retailer is to buy while he can.

It is always a good policy to buy when everybody is selling, as experience has shown that the buyer has always reaped a good profit. We feel satisfied that the demand is sufficiently strong to support prices at their present levels, with every indication of growing stronger and permitting of a higher scale. The law of supply and demand is always with us and must be respected and no amount of personal opinion can hold back the wave of necessity. Let the buyer screw up a little courage and stock up. Wise manufacturers are not sacrificing anything and their little wait will work out to their ultimate benefit.

Now Operating Their Own Mill

The Buffalo Hardwood Lumber Co., of Buffalo, N. Y., have commenced the operation of their own mill at Forestport, N.Y. Last month they sawed the first log and they have been sawing steadily since on birch, beech and maple. The company expects to run this mill for a number of years and announce that they are in a position to duplicate shipments and take care of the trade from year to year without change. J. B. Wall is the president of the Buffalo Hardwood Lumber Co., T. H. Wall, vicepresident, and M. M. Wall, secretary.

Will Visit Canada to Extend Work

H. R. Isherwood, secretary-treasurer of the Concatenated Order of Hoo-Hoo, states that the annual meeting, which was recently held in St. Louis, was one of the most interesting and harmonious ever conducted in the interests of the Order, and that the numerous ideas that were adopted will place the Hoo-Hoo upon a basis that will command the support and respect of lumber and allied industries at large. Mr. Isherwood states that he intends to visit the principal points in Canada in the near future that they may have the opportunity of learning the new features and benefits to be derived from supporting and promoting the principals of the organization.

Hardwood prices per thousand feet, according to Washington advices, have averaged higher than softwoods, both of first quality, since 1895, except for one year (1905) but this has not always been the case. From 1855 to 1895 softwoods cost more on the average, wholesale, in eastern markets, than hardwoods; up to 1870 being nearly double in value per thousand feet. Since 1895 the hardwoods have led in price, in 1919 being about 10% higher than softwoods and early in 1920 40% higher, according to a recent table of average prices published by the Forest Service.

Mr. Wilson Outlines Quebec Timber Laws

Elwood Wilson, Grand'Mere, P. Q.

Ellwood Wilson, head of the Forestry Department of the Laurentide Company, was one of the principal speakers at the annual meeting of the Society for the Protection of New Hampshire Forests, held at New London, N. H., recently. Mr. Wilson addressed the conference on the timber laws of the Province of Quebec and gave a comprehensive outline of these laws and their relation to the recent controversy over pulpwood restrictions imposed by the Dominion Government. Mr. Wilson's speech was as follows:

"All of the provinces of Canada, with the exception of Alberta and Saskatchewan, own their own natural resources. These two provinces, in return for certain grants of money, have turned their natural resources over to the Dominion Government. In Quebec, all mines, water powers and forests belong entirely to the Provincial Government, and the Dominion Government has nothing whatever to say as to how they shall be utilized or administered.

"So far as the forests are concerned, the original idea of the Government was that the timber should be sold to lumbermen and, after the timber had been removed, settlers should be allowed to come in and occupy the lands using them for farming purposes.

"In order to encourage settlers, a minimum diameter limit for cutting trees was fixed for the lumbermen, with the idea that enough timber would be left to enable the settler to build his house, barns and fences and also to provide a certain amount of pulpwood which he could sell to help him tide over the time during which he was clearing up his plot of land. As time went on and it was found that there were many sections of the province which were not fit for agriculture, the Government decided to continue the diameter limit so that the forests should not be entirely removed and revenue cease. When the Government realized that it had plenty of timber and water powers easily accessible, it decided, in order to encourage the pulp and paper industry, to forbid the export of unmanufactured wood. By unmanufactured wood is meant pulpwood or wood which has had the bark taken off ready for shipment. In order to comply with the law, wood must at least be made into lumber or pulp:

Much Non- Agricultural Land.

"As a very large part of the Province of Quebec is non-agricultural land, and can never be used for anything except forests, it is a wise move on the part of the Government to make every effort to conserve its raw material and to build up an industry based on the great natural resource of the forests. In doing so the Government was entirely within its rights and should, by all means, be commended and encouraged in such a policy. It would be very foolish, indeed, for the Quebec Government or any of the Canadian Governments to allow unmanufactured wood to cross the border only to build up mills, at a great distance from the forests, greatly to the detriment of the local populations.

"Licenses to cut timber on Crown Lands have always been made for one year only, and must be renewed annually. Objections to renewal are not raised so long as the regulations are complied with. The law, however, distinctly says that the license can be cancelled at any time for an infraction of the regulations, and owners have on occasion been warned that if they did not conform to the regulations their licenses would be cancelled.

"License holders must pay ground rental of eight dollaars per square mile a year and at the time of cutting the timber must pay the rate of stumpage fixed by the Government. All surveys must be made at the cost of the licensee, who is also responsible for fire protection and for the carrying out of the timber cutting regulations.

"By the foregoing it can be seen that the Quebec Government has acted in a wise and far-seeing manner in order to protect its forest resources, to build up the industries dependent on them, and do all it possibbly can for the general welfare of its people.

Foreigners Bought Timber Licenses.

"Americans and other foreigners have, from time to time, purchased timber licenses and have never been disturbed in the exercise of their rights. At the time the law was amended, requiring the manufacture of timber in Canada, there was practically no opposition whatever on the part of the license holders, either native or foreign, and several mills were built with outside capital.

"Freehold lands, that is lands which have been granted outright to settlers or others, are not subject to the manufacturing clause restrictions and wood cut on these lands may be exported or handled in any way which the owner sees fit."

Wit and Wisdom for Lumbermen

(From Gulf Coast Lumberman.)

A telephone booth would be big enough for a convention of all landlords who haven't raised their rents.

"Goats Sells For $1750" reads a newspaper headline. You can get many a man's goat for a good deal less than that.

The difference between a stock of lumber and an order list is the difference between a liability and an asset.

The "bright future" predicted for many a young man has turned out to be simply the blazing fires of Satan's dynasty.

Advertising is like pugilism. Unless you've got lots of backbone, nerve and patience, stay out of it. It's no game for a quitter.

Some lumber dealers are like the young man who was told that wine, women and song were ruining his health. He cut out the singing.

Unless you meet them face to face, it is hard to recognize some of your lady friends nowadays, if you are not quick at figures.

"Standing pat" may be a good rule in politics or poker, but you better draw right down to your hand when it comes to running your business.

The pennant winner may not have many home-run hitters, but when you come to analyze it you'll find that team work brought them victory.

"Rome wasn't built in a day." No, but just think how much longer it would have taken if some of our present day labor unions had been on the job.

Paint can be made to perform the same service for a home that it does for a woman. It makes 'em fall for it. And, incidentally, Fall is the time for it.

When a man is always thinking of a woman, it doesn't necessarily mean he has a soft spot in his heart for her. He doesn't think with his heart. The soft spot is probably in his head.

Never mind how "high" lumber is. The detective who asked how tall was the missing cashier, was told: "I don't know how tall he is. What worries me is that he was $3,000 short."

Why Living Costs Are So High

The Lindsley Bros. Company of Spokane, Wash., makes the following comparison between "the good old days" and the present day:

"The Good Old Days"	The Present Day.
Sugar.	The movies.
Haircloth Sofas.	Manicures.
$1.00-a-day hotels.	Teddy bears.
Tintypes.	Joy riding.
Free lunches.	Tight skirts.
Foot dancing.	$10.00 lunches.
Congress shoes	Jazz bands.
Torchlight processions.	$18,00 shoes.
Rainy-day rubbernecks.	War tax.
Livery stables.	Bolshevists.
Petticoats.	Skirt shortage.
Hair rats and switches.	Sport shirts.
2-cent railway fare.	Jitneys.
Kerosene lamps.	Ukeleles.
Red undershirts.	Two-bit shaves.
2-piece bathing suits.	Tea wagons.
Natural complexions.	Wireless.
Snake doctors.	Silk hose.
Nickel car rides.	The Shimmy.
Stovepipe hats.	50-cent hair cuts.
10-cent shaves.	Low necks.
Bustles.	Traffic cops.
All-wool.	Sugar shortage.
"What'll you have?"	$100.00 suits.
Hitching posts.	H. C. L.
$10 suits.	Six-hour days.
Long skirts.	Silk shirts.
Ten Knights in a Barroom.	Plucked Eyebrows.
Moustache cups.	Wrist watches.
Buggy rides.	$3.00 wheat.
Real blondes.	Daily baths.
Sideburns.	All-the-way-backs.
Corsets.	Jamaica ginger.
Cotton stockings.	Coal shortage.
Parlor sea-shells.	Bridge whist.

Horizontal Hopper Feed Band Resaw

Wm. B. Mershon & Company, of Saginaw, Michigan have just brought out a new horizontal band resaw which is adapted to a wider range of work than any other machine of this type now on the market. Although it was primarily designed for the resawing of box shooks or stock cut to length, it will resaw long stock such as is called for in general planing mill practice, including bevel siding. The feed works can be arranged so that several pieces of narrow stock can be sawn at the same time, each piece being provided with an individual support. This arrangement makes it possible to greatly increase the output on this particular class of work.

This horizontal resaw is built either as a single or twin machine and when built in the former way, the saw wheels can be located above or below the feeding bed. If at some future date, after a single

Mershon Hopper Feed Band Resaw

resaw has been installed, a demand for a twin machine should develop, the single machine can be converted into a twin by furnishing the necessary parts to make the change. The machine is so constructed that it is entirely feasible to do this.

With the machine built as a twin, it is possible to either feed one piece at a time from the hopper, sawing it into three pieces, or two pieces may be fed one on top of the other, each piece being sawn in the middle. The saw wheels are of the web and arm type, fitted with weldless steel locomotive tire rims. It is equipped with crowding wheels or rotary saw guides in place of the stationary type that is generally used on machines of this kind. These guarantee a maximum output with a minimum sawkerf.

Box shooks or stock cut to length is fed from the hopper by means of a patented feeding device making use of a single feeding plate which is quickly adjusted for handling stock varying in length from 7-in. to 48-in. This mechanism feeds the stock from the hopper into the feed rolls, keeping the ends of the same butted, and thus maintaining a continuous feed.

The feed works consist of four driven rolls, two being adjustably mounted in the bed of the machine and working in connection with two sets of patented sectional driven press rolls located directly above the bed rolls and provided with a vertical adjustment to suit the thickness of the stock being sawn, each section being positively driven by means of spur gears. This construction makes it possible to feed several pieces of unmatched stock placed side by side in the hopper, even though they may vary somewhat in thickness.

All exposed parts are well guarded and controlled levers conveniently located. This is a self-contained machine, all working parts are mounted on the one bed plate and arranged with a view of having them most accessible.

An Analogy in New York State

"A situation analogous to that in the Eastern Provinces of Canada exists in the State of New York, where the State has bought more than a million arces of timberland, and has shut it up altogether against exploitation of any sort or kind. Tracts of land have been condemned by the State and their owners have been compelled to sell them. Only recently, the very company carrying on the strongest agitation for access to Quebec pulpwood has sold a tract of pulpwood to the State of New York and now no timber can be cut from it. It would seem much more reasonable for this company and others in New York State to carry on an agitation requiring the State of New York to allow them to cut timber in the forest reserves before they begin to agitate for the removal of the manufacturing clause from the Quebec law.

"If New York has the right to take up timber lands and forbid any cutting whatever on them, the Province of Quebec certainly has the right to say what timber shall be cut and how it shall be manufactured on its own land.

"Until the United States takes some steps to adopt forestry methods in the utilization of its timber and to frame some national and State policies for the proper conservation and exploitation of its resources, it seems hardly right that, having wasted its own birthright, it should now atempt to utilize Canadian forests in the same way.

"Canada has gone far ahead along forestry lines and she certainly deserves all praise and encouragement. Much of this progress, has, of late years, been due to the efforts of the pulp and paper industry, which has organized co-operative fire protection systems, has introduced aircraft for fire patrol and forest reconnaissance and mapping, has commenced reforestation on a commercial scale and has contributed largely to educational work.

Conserving the Interests of the North

At the annual meeting of the Temiskaming Associated Boards of Trade, which was held recently at Timmins, several important resolutions were considered. One of them was to have the Ontario Government turn over a certain timber area to a northern commission. It would sell the timber and the money would be used to build a highway. Another resolution related to forest conservation and suggested that a committee be named to meet the timber men, and go into the matter of conserving the resources of the north. When all data on the matter has been secured, it would be submitted to the Ontario Government with the suggestion that the recommendations made be embodied in the law for conservation.

Ten Thoughts for the Worker

I. Be Fair—to your employer, your associates and yourself. By word, work and thought be as "straight" as you want them to be.

II. Be Dependable. If you agree to a thing, either definitely or by understanding, stick to your word.

III. Control Your Anger—against associates and foreman. You're not always right; others are not always wrong. Don't fly off the handle.

IV. Be Broadminded. Don't always think evil of your employers, your foreman, or your fellow-workers.. Narrowness in yourself always inspires narrowness in others.

V. Take Full Share of Blame. Don't "pass the buck" for even as you pass it, so shall it be passed unto you.

VI. Respect Property, Rights and Feelings. Use your tools and surroundings as you'd want your home treated. Don't say or do things that you yourself would resent.

VII. Do an Honest Day's Work, for an honest day's pay. Don't shirk your duty nor skimp your production, if you expect to honestly take a full week's wages. Greater production means lower prices and depends on the individual. Do your share.

VIII. Be Conscientious in Quality. Don't pass work along that is not well done, even though it costs you a little more to do it right. Someone suffers for your carelessness, and you have to pay in the end.

IX. Train Yourself mentally and physically, for bigger jobs and better service. Have as you aim the increasing of your capacity, ability and value. Set a high goal and plug for it.

X. Take Frequent Inventory of Yourself. See if you are progressing in value to yourself, your family and your employer. Compare your present mental and physical equipment with that of six months ago. Find the obstacles to growth and overcome them. —National Items.

Join Hands with the Canadian Forestry Association

A COUNTRY-WIDE Educational Union of 11,000 citizens endeavoring to promote the national welfare through (1) the protection and proper management of Canada's forest assets, in order to perpetuate the timber resources for all time, and (2) the development of tree planting on the bare prairies and in our towns and cities.

Membership is open to all. Annual fee $2, including subscription to the Illustrated Canadian Forestry Magazine, a non-technical and highly interesting monthly. If you like trees, you'll enjoy the Forestry Magazine.

Auction Sale of Timber Licenses

UNDER AND BY VIRTUE of the powers contained in a certain hypothecation which will be produced at the time of sale, and under and by virtue of all other rights and powers thereunto enabling, there will be offered for sale by public auction on Saturday the 20th day of November(1920, at the hour of eleven o'clock in the forenoon by C. M. HENDERSON & CO., AUCTIONEERS, at their premises, 128 King Street East, in the City of Toronto, the following property, namely,—ALL THOSE CERTAIN LICENSES to cut timber in and upon certain portions of the Township of Proctor and on the North shore of Lake Huron, which licenses are known respectively as Numbers 90 and 91 of the Season 1920-21 and being Berth No. 142 in the said Township of Proctor and Berth No. 143 on the said North shore of Lake Huron, each parcel containing an area of thirty-six square miles more or less, as set forth and described in the said licenses, saving and excepting thereout all such lots or parcels as are thereby excepted.

The limits for which these licenses are held are said to be favorably situated and easy of access. It is reported that there are upon the limits fifteen million feet of Hemlock; four million feet of White Pine and ten million feet of hardwood, suitable for manufacture into lumber.

TERMS: Ten per cent. of the purchase money to be paid down at the time of sale and the balance to be paid within thirty days, without interest.

The licenses are offered for sale subject to all the conditions and regulations of the Department of Lands, Forests and Mines of Ontario affecting the same.

The licenses will be offered for sale in one parcel and subject to a reserved bid.

Further particulars, terms and conditions of sale will be made known at the time of sale or upon application to Messrs. Johnston, McKay, Dods & Grant, Traders Bank Building, Toronto, Solicitors for the vendors.

DATED at Toronto this 30th day of September, 1920. 20-22

Review of Current Trade Conditions

Ontario and the East

There is no special activity in the lumber line and business on the whole is rather quiet, although some wholesalers report that sales have picked up a little during the past few days. The hardwood market has been pretty hard hit by the woodworking industries which consume large quantities, not buying at the present time. Automobile concerns are practically idle and, with few exceptions, piano and phonograph plants, wagon works, implement manufacturers and others are adopting a policy of recession and state they have enough stock on hand to last until well into the new year and will wait developments before loading up. The result is that there has been quite a drop in prices on some lines and there is said to be larger stock of dry hard wood in the hands of the manufacturers and wholesalers than there was at this season last year when the requisitions were much keener and far more in number than they are today and industrial plants were busy.

How far the wave of price cutting, which is now sweeping the country, will affect lumber remains to be seen. When values in every known commodity began to ascend about a year or eighteen months after the outbreak of the war, lumber was one of the last products to aviate and naturally it may be the last to come down. Wages have not fallen, but on the contrary are from five to ten dollars stiffer per month in the bush than they were a year ago. Some districts report men very scarce and others declare there is an abundance of help, but that it is still very restless and far from being as efficient as it might be.

At a number of points along the Canadian National Railway there is a decided dearth of men to get out the shipments. Most of the lumber companies are not putting as many crews in the bush as last year and there is considerable talk regarding a decreased cut. Some firms in the Georgian Bay district have only half the number of camps that they had last season at this time. Most of the sawmills will close down during the next week or ten days and whether there will then be more men available for the woods remains to be seen.

The favorable weather is creating a lively building campaign in some centres but with prices easing off in other communities, builders are holding back waiting for anticipated further reduction in forest products. Whether these will come or not is problematical and one man's forecast concerning the future is as reliable and authoritative as that of another. The disturbance caused by the recent advance in freight rates has tended to upset business and certain firms are holding back until the result of the recent judgment at Ottawa is finally decided, or waiting for the five per cent, reduction which will go into effect at the beginning of the year.

The ordinary lumbermen is in a quandary, not only in respect to the probable demand for next year but also over-production costs. The pulp companies are taking out enormous quantities of pulpwood to meet the existing strong demand for the finished product and are paying exceptionally high wages, which they are enabled to do by reason of the shortage in paper, but the same state of affairs does not characterize the lumber arena, and if producing costs go too high, lumber operators fear that they will not be able to make a profit on next year's cut.

Eastern representatives of B. C. firms report that the freight rate increase has not yet been adjusted and, while certain mills are assuming the extra charge others are disposed to go only part way and not a few consumers think they should go all the way. White pine is holding firm and, for the better grades, this is especially true. Other soft woods are a little easier and the general trend and tone of the market is suffering to some extent by reason of the radical reduction on southern stock. The car situation is very good but there is not nearly the amount of lumber on wheels that there was a few months ago. Not much improvement is looked for in conditions until after the first of the year and things generally become a little more settled.

Lumbermen are as a whole disposed to accept the present situation philosophically and believe that, when readjustment does take place, there will be a stabilization of values and a firm, basic tone to the whole merchandizing business. After every period of activity there is inevitably a reaction and last spring, not only were the highest prices ever known being paid for all offerings, but a premium was, in many cases, put on on top of that in order to secure material to sell. Now a change has come over the scene. The demand from the United States has fallen off decidedly and local consumption is below normal at the present juncture. There is a disposition to mark time and await developments. Those with heavy stocks, who can afford to hold them are confident they will be able to get rid of them in time at a fair value, but smaller operators are not in such a tranquil frame of mind and have been offering car lots at cut prices in order to unload. The situation is rather a complex one and, instead of the market being a seller's one, it has veered around to the side of the buyer. Meanwhile, the clamor for houses is going on steadily and rents are ascending all the time but builders are apprehensive about proceeding as they may find, with the great outcry against excessive rents, that they will not be in a position to get a fair return on their investment.

In regard to the freight rates, a western lumberman recently said that he believed that the delivered prices today on uppers have not increased any over the prices prevailing before the increase in freight rates; in other words, the mills have practically absorbed all the increase and a little bit more. Of course, they have absorbed part of the increase on dimension, boards and timber.

United States

The lumber market generally is quiet. Prices have been reduced in several centres and most buying is from hand to mouth. The Presidential election will be over within a month and it is expected the general conditions will become a little more stabilized after the result of this struggle is known, although, generally speaking, there is not much hope of business reviving to any appreciable extent until the new year. The recent reduction in prices by automobile concerns and other allied interests shows the trend of the times, and would seem to proclaim that the era of extravagant buying and high-priced articles is subsiding, although no one is looking for a return to the pre-war levels. It is stated that stability will not be arrived at until the people are convinced that full readjustment has been made to new conditions. Building operations are falling off and retail yards are not buying any more than is actually required. Buyers are naturally halting until they are convinced that the market will go no lower. Speaking of the tendency to cut prices, a recent edition of the "American Lumberman" says:

"The very commendable action taken lately by retail lumber dealers of Chicago in announcing reductions in prices of lumber of from 16 to 30 per cent. under those that prevailed in the early part of the year should have a beneficial effect in convincing prospective builders that the price of lumber need be no deterrent to building, and also should encourage dealers in other building materials to do likewise.

The lumber industry generally has come to realize more than ever before that it can gain and hold the sympathy and good will of the public if it tells the public frankly the facts about the lumber business. It has long been the custom for lumbermen to stand aloof from the public, so far as publicity was concerned; and as a result the people frequently have been mis-informed and misled through publicity from sources unfriendly to the lumber industry.

"Even at the highest level that has obtained the retail price of lumber has not really been the retardment to building that has been charged—but the public was made to believe it was. Now that the facts are being told and the people shown that lumber prices are from 16 to 30 per cent. lower than those of the early spring, the lumber industry no longer can be charged with retarding the building programme by holding out for unreasonable prices. And Chicago is not the only city in which retail prices of lumber have declined very materially—declined through the voluntary action of the dealers, who have desired to do their full part in putting the building programme in motion again."

The situation in the hardwood lumber market has not changed materially during the past few weeks. There may have been some further decline in price levels, but offerings at low prices do not seem to develop trade volume. Wood-using industries are buying only from hand to mouth, and their appetites are easily satisfied. Furniture manufacturers, automobile manufacturers and makers of interior finish are not being rushed by the buyers of their products, and they do not require much raw stock to keep them going. They have little reserve stock, and so are taking what they need in small lots. On the other hand, there is no surplus of stocks in the hands either of the mills or the wholesalers, and not many of them are pushing sales. Early sales at good prices gave most hardwood men a fair volume for the year, and they are more intent upon holding buyers to contracts and inducing them to take what they bought than they are

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. Bole, Pres. F. H. Goff, Vice-Pres. E. C. Barre, Gen. Mgr. W. A. Saurwein, Ass't. Mgr.

upon making new sales at current prices. There is some demand for low grade lumber, for the box makers are more or less busy; but the upper grades are moving very slowly.

Generally, the softwoods have shown further declines in prices lately, and in the case of yellow pine this is reflected in the open quotations of a number of mills whose lists have been somewhat above the current level. Many mills are suspending operations in the Douglas fir regions, a late telegram estimating that one-third of the mills are down. This message further predicts that only 50 per cent. of the plants will be in operation two weeks hence unless the situation improves.

The freight rate situation is one uncertain feature, and the parts of the country that are placed at an increased disadvantage are hopeful of a readjustment. That these sections are feeling the effects of the greater increase in their delivery costs is indicated by statistics of new orders for the two chief competing woods, southern pine and western fir. The demand for both fell off immediately following the advance in rates; but, while the decrease in new business received by the mill men of the far west has continued, there has been a steady increase in the amount of new business going to the southern pine mills since the last week in August.

Great Britain

Trade generaliy is quiet and there are no particular developments of interest. Transactions are for the most part limited and no development of the spruce situation has emerged. Trading in this description is very difficult, equally in regard to shipments coming forward and spot goods. Fresh imports have the preference over yarded stocks on account of their better condition. A large portion of the spruce imported by the Government is badly conditioned, and the sizes are not generally attractive.

Several shipments of Canadian pine have arrived, and during the short time that remains of the shipping season no doubt other consignments will come to hand. These goods will all be required before the opening of next season. The demand for pine is not strong at the moment, except for first quality, but a fair trade is passing in lower grade deals and sidings. Values remain firm and are improving.

Arrivals at Liverpool of birch planks, from Halifax and St. John, have dwindled down, and some headway is being made with yarded stocks. Values are elastic, and widely differing quotations are encountered. A very low price was paid at the auction sales in London, and some cheap wood has also been sold from stocks in Manchester and Liverpool. The demand, however, is still inactive, and the prospects of improvement as regards chair making requirements are not at present encouraging.

An improvement in the enquiry for pitch pine lumber is reported. Spot values are out of proportion to the cost of freshly imported wood, but the heavy stocks on hand prevented appreciation of values.

Building operations have not extended to the degree expected, and this lack of activity has depressed sales of building sizes and of floorings. In addition to the fact that business is depressed from general causes, the threat of a coal strike is preventing buyers taking any but the smallest risk in purchasing. In fact it is impossible to ascertain how far this impending coal trouble has affected business. It is quite possible that the settlement of the dispute would be followed by a spurt of greatly improved trading.

The strike of shipwrights in the Mersey-side repairing yards has been in progress just a month, and the prospect of a settlement seems as remote as it was on the day when the men laid down tools. Both sides have assumed a very determined attitude. The men struck upon the refusal of their demand for a minimum wage of £6 per week, and according to the officials of the Mersey side branch of the Shipconstructors' and Shipwrights' Association 3,000 are now idle. The merits of the case are difficult to disentangle from the statements made on both sides. The employers rejected the men's application on the ground that ship repair work cannot now carry the additional burden of expense which the increased rate of wages demanded would entail.

There are now unmistakable signs of a lower level of rates coming about, owing to competition among the shipowners of the world, says the "Timber News." Nearly all the largest companies are making provision for less rosy times which they anticipate are not far off. We have heard recently, of several fixtures which were keenly competed for, and as a result a big reduction in the original quotations was eventually secured. As the close of season gradually gets nearer, competition is most likely to get more severe, as there will not be so much cargo available. So far as next season is concerned it would be as well for charterers to hold off from fixing as long as possible. Shipowners or brokers should not be given particulars of likely requirements too soon, as this always proves of great help to them in making their arrangements ahead. There are plenty of new boats coming on the market, and the supply generally is getting better and better, so there should be no hurry to charter in advance.

The cost of steamers is gradually getting lower, too, especially of the "tramp" type; 100s. to 110s. from Swedish ports is too much. Next first-open-water charterers ought to be able to do much better than this, especially if they are not in too much of a hurry to get room. Many nations are now competing for the carrying of wood cargoes, and each of them is getting a good supply of new construction, so there are undoubtedly better times ahead for charterers in the timber trade.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Quebec Report Shipping Rates Have Gone Up?

The bulk of timber and sawn lumber has been shipped from the St. Lawrence, including the port of Quebec. There are only a few parcels remaining for movement overseas that will be shipped by the Manchester Line steamers. In the meantime and contrary to the expectation of the export trade, freights have again soared, the tramp steamers raising the rates from 180 to the former figure of 200 shillings. These conditions have come as a disappointing surprisee to the shippers, who felt certain of a further drop in freight rates during the last months of St. Lawrence navigation, instead of a rise. The Imperial Government has arranged with steamers to carry the vast quantity of lumber that it purchased during the war, and is stored along the lower St. Lawrence. Though there is a good two months' season for these shipments to take place from the points of storage in the lower St. Lawrence, it is probable that they will go by the port of St. John, N. B.

The recent storm, which had a wind velocity from 65 to 70 miles an hour, struck the district of Quebec September 30th and continued all the following day. It caused considerable damage to property in the city, though shipping escaped, with the exception of the foundering of two small coasting schooners in the lower St. Lawrence. It also caused the booms to break away along the Quebec waterfront coves, and scatter the timber there secured. The scene after the storm beggars description. The large storage of waney pine was driven by the rise of the tide and velocity of the wind all along the beach from Sillary Cove to the Quebec Bridge, and upon the public roadway. Timber was also driven up and piled on the wharves. The storm blowing from the south forced the timber around by all the Quebec merchants towards the north. That accounts for its being piled on the beaches, the roadways and the wharves, and not being sent adrift in the river. There are now gangs of men working to repair the booms and rescue the timber and return it to the coves. The owners say that there will be no heavy losses. The only expense entailed will be the repair of the booms and recovery of the timber.

Quebec timber and lumber merchants inform the "Canada Lumberman" that prices in the district of Quebec will be maintained notwithstanding the appearances for a drop. They advance as a reason that the jobbers are asking more money this year than last to take out logs.

The movement of pulpwood from the district of Quebec to the United States mills is proceeding under more favorable conditions. Exporters of this wood say they could do better if they could only obtain the American car transportation which is difficult. At the present all American cars bringing coal to Quebec, are being utilized to carry pulpwood to the United States' mills. The Remington Co., who leased property on the St. Lawrence River frontage from the Canadian Railways, are bringing trainloads of pulpwood and dumping the wood into the river, and secured by booms, this is loaded into lake barges and transported up and into the Great Lakes to meet the demand of American pulp and paper mills. During the storm, attached to and above the booms, material was partially wrecked and approximately 40 cords of pulpwood were lost.

The continued rise in the price of pulpwood is commencing to cause a storm in the trade in this district. The whole trouble seems to lie in the cost of production and the money paid in labor. It would appear from investigation that the price of labor, which is

Wycliffe, B.C.

soaring more and more every year, is due to the demand for wood and competition of the dealers, together with the scarcity of this class of help. The whole thing sooner or later must be closely studied and remedied or the price will go even higher and cause pulpwood to become equal in value to its weight in gold.

The Quebec correspondent of the "Canada Lumberman," having made diligent enquiries into the cause for the high price of labor, has come to the conclusion that the jobbers, with the consent of the pulp and paper manufacturers, are in a great measure to blame. For example, during divine service in a parish some miles distant from Quebec, the priest announced that a meeting would be held after service on the outside. This gathering took place when a pulpwood jobber addressed the people and said he required 35 men to go into the woods and cut pulpwood, for which he would pay $8.00 per cord. This is a small parish and some 25 young men abandoned their farm work to cut wood. Two men, it is said, can cut three cords of pulpwood per day, for which $8.00 per cord or $24.00 would be earned daily. It is the scarcity of labor in proportion to the demand that is responsible for such high wages. The remedy is to import help from abroad that will make pulpwood for less than half the price and so greatly reduce the cost to the consumer.

Eastern Logging Production Will be Cut Down

Lumber conditions at St. John remain absolutely stagnant at present. There have been no changes in prices during the last two weeks and there are no anticipated changes which one can look forward to. Certainly, very little logging will be done this coming winter from this section of the province. It is also understood that very little, if any, logging will be done on the north shore of New Brunswick; in fact, all over this country few plans are being made to get any logs at all. The brokers, who at this time of the year usually make contracts with the portable mill men for winter sawing, are refusing to do so and at present practically no contracts have been made at any price.

The cost of logging, if the price the operators ask is granted, would be on an average of $3.00 per M more than last year. Therefore, on the falling market and with great uncertainty ahead, it is deemed unwise for anyone to go into the woods to get logs under these conditions. The only safe solution to restoring prices and steadying the market is that as little logging and manufacturing should be done this winter as possible. Very few contracts for logs have been granted to anyone. The mills at St. John are waiting to see just how wages will turn and how the provision market is going to go. At the moment it is weakening and everything looks as if there would be further reductions in prices all away along the line. Sugar, flour and grain of all kinds are weaker than they were two weeks ago and everything points to further reduction in quotations. It is said that all that is holding the prices together and stabilizing conditions are the banks. Should the banking fraternity withdraw its financial aid, it would cause a panic in quick reduction of prices.

As low as $32.00 has been paid for rotary cut deals during the last two weeks, and in fact, it is said that some have been sold for less money. At these prices no portable men will go in the woods. Five mills at St. John are still in operation, all sawing 3 inch deals, the majority of which are from large American logs and are unsold. The specifications of these deals are excellent and are much better than anything produced throughout the provinces.

Locally, the factory business is good and a steady demand for finished lumber and ordinary lumber for repair work continues active up to the present time. The outlook for the factories for winter work is first-class. No reductions have been made on local finish prices, as the costs have not been reduced either in the lumber itself or in the labor which is going into the work. The factories have work for, at least, three to four months ahead of them and with possible accumulation for the balance of the season.

Laths and shingles still retain their summer prices and stocks are not at all excessive. The outlook is that all laths and shingles will be shipped from St. John before the close of navigation.

The British market at the time of writing is dead and the possibilities are that there will be no improvement until well along in the winter or next spring.

General Market Conditions in Montreal Unchanged

General conditions in the lumber line in Montreal remain quiet and there is not much buying going on. The most active wood at the present time is spruce, in which there has been a slight advance made by some of the local firms. An increase in building operations during the past month has resulted in a larger call for this particular wood. The lumbermen contend that the recent advance of about 5% is fully justified by reason of the high cost of logging and the heavy wages which are being paid in the bush. It is reported that some firms are paying as high as $125.00 a month, exclusive of board, in order to secure the most experienced and active men. There are any number of fellows available but too many of them are inefficient and inexperienced. The larger operators believe that it is most economical to engage and retain a comparatively small staff of able and practical workers than to accept anyone who comes along. The results are more satisfactory in the long run especially so where the output is limited.

Export to the United Kingdom has fallen off. With the exception of spruce, practically no lumber at all has been shipped to Great Britain during the past month.

Export to the United States has not yet assumed an active trend, but in the opinion of the lumbermen specializing in American trade, these conditions will be improved towards the end of the year.

The total value of building permits issued by the city of Montreal for the month of September amounted to $1,350,740, as against $1,050,976 for the corresponding month last year. Total value of permits issued for the first eight months of this year was $12,347,119, as against $6,964,644 for the same period last year.

Shipments from B. C. have entirely fallen off, due to the prices asked by the B. C. firms.

Pulpwood is still commanding high prices, and owing to the high prices, the majority of Quebec lumber firms are turning their supplies of lumber into pulpwood.

Thinks Retailers Should Not Hold Off

A leading Ontario lumber salesman stated this week that the majority of retail yards throughout the province appeared to be doing a pretty fair business but that there seemed to be a sort of mutual or silent understanding among the majority of lumbermen that they would not buy at the present time. He added that he stepped into a yard the other day and found that the dealer was short of stock on two sizes which had been in very active demand. The man would not place an order to replenish these sizes, but instead was using a resaw to cut up lumber that cost at least $15.00 more per M than the sizes in which he was short, simply to "bridge the gap" or to meet the demand. The salesman thought this was a rather short-sighted policy to pursue and believed that lumber prices would hold their own. Nothing was to be gained by sacrificing values, and he was confident that conditions would right themselves in a very short time.

Establish New Hardwood Flooring Plant

The Macdonald Lumber Co., wholesale lumber dealers, Toronto, have commenced the manufacture of hardwood flooring at Maisonneuve, Montreal, and are meeting with encouraging results. Although only in operation a short time, the company are making ready to add new equipment and to increase the capacity of the plant. The company manufacture birch, maple, quartered cut white oak, plain red oak and beech hardwood flooring, and carry stocks in their yards at Montreal and Toronto. The brands of the Macdonald Lumber Co. are known as "Eclipse" and "Keystone" hardwood flooring. The company's office in Toronto is at 34 Victoria Street and in Montreal at 71 A St. James Street.

Another Big Mill for Canada

P. T. Dodge, president of the International Paper Company, who was in Montreal with the Riordon party which went to inspect the new plant at Kipawa, announced that his company will build a second pulp and paper mill in Canada. He confirmed the impression that this is the first time the fact has been publicly stated, but remarked that the matter has been under contemplation for some time.

The International Company, which is the largest producer of paper in the world, 60 per cent. of which is newsprint, is now building a pulp and paper plant at Three Rivers, and Mr. Dodge stated that in sixty days it will be turning out pulp. The paper mill will not be ready to operate for some months yet. It is designed to turn out 200 tons of newsprint a day.

As the International Company has acquired extensive timber interests in New Brunswick and now controls a valuable water power at Grand Falls, the impression prevailed in paper interests that the next move will be in that locality, but Mr. Dodge stated that they have more than one locality under consideration.

Urges Plan of Scientific Reforesting

Workers in the paper industry are not responsible for the newsprint shortage, John P. Burke, president of the International Pulp, Sulphite and Paper Mill Workers' Union, emphatically stated in his address in Ottawa to the delegates attending the International Union Convention. According to Mr. Burke's statement, more paper is being produced now than ever before, and the principal cause of the shortage is due to the enormous editions issued by metropolitan dailies. Mr. Burke urged the Canadian and United States Governments to immediately take up the plan of scientific reforestation if we are to continue manufacturing paper from pulpwood.

"Open Kettle" Registered

Extra Fancy Molasses

We know you serve Molasses to your Lumberjacks. Have you ever tried our "OPEN-KETTLE" blend? We have a way of blending several kind of syrups and molasses into one, giving the right taste.

You probably know that Blended Tea has a better flavor than unblended. You will find that same applies to MOLASSES. Of course not all Blended Tea tastes alike and not all Blended Molasses would appeal to you.

Read what Dr. Milton Hersey (Industrial Chemist) has to say:

"We have tested and analyzed a sample of your "Open-Kettle blend fancy Molasses" and find it made of a good quality of syrups and molasses, free from any impurities. It has a high food value. Our tests indicate it is well adapted for eating and table purposes."

We suggest that you give us a trial order for a carload of our "OPEN-KETTLE" Blend at $1.00 per Im. Gal. x F.O.B. Cars Montreal.

Samples will be mailed on request.

EDGINGS

Ontario

Hall Bros., Limited, Toronto, who have been conducting sawmill operations at Marlbank in Hastings County, have ceased sawing after taking out about 1,000,000 feet of mixed hardwood. This firm have in the past handled considerable rock elm, and may go extensively into this line next season.

The Industrial Planning Corporation, Limited, has been granted a charter to carry on the business of general consulting and structural engineers, and to design, instal, equip, alter, etc., building and structures, plant and machinery of all kinds. The capital stock is $20,000 and head office is in Toronto.

The Fogg Timber & Contracting Co., with head office in Timmins and a capital stock of $40,000, has been granted a charter to carry on the business of lumbering and timbering operations and general contracting. Among the incorporators are John W. Fogg, Dr. Herman H. Moore and W. M. Widdifield of Timmins.

The will of the late Jacob Kaufman of Kitchener, which was recently filed for probate, shows that he left an estate valued at $911,674.00. In this amount was included $150,000 in the stock of the Jacob Kaufman Limited, planing mill, $150,000 in the Dominion Wood & Lumber Co., and $325,000 in the Kaufman Rubber Co.

At a well attended meeting of the creditors, including depositors of the Muskoka Cordwood and Lumber Company, held in Toronto, the offer of $931.75 for the estate's equity in the cordwood limit at Southwood, Muskoka, and the remaining 39 cords of wood in the bush, made by Colin Macdonald, was considered and approved.

Reports from Port Arthur show that the work of constructing the plant of the Kaministiquia Pulp & Paper Company is progressing at a satisfactory pace, and it is expected to be ready for operation by November 1. The woodroom is almost ready, and the construction of the mill building is proceeding smoothly with the installation of machinery keeping pace.

Old ties from the G. T. R. were being dumped into the bay, according to complaints received at Hamilton, and were proving a menace to small boats. One fast launch had struck a log, with the result that the bottom was partly torn out. It was decided that the superintendent of the G. T. R. should be notified of the nuisance and requested to stop the practice immediately.

The National Pole Co., a corporation existing under the laws of Michigan, has taken out an extra provincial license to manufacture, buy, sell and deal in wood, lumber, telegraph poles, railway ties, posts and all forest materials in Ontario, and is empowered to expend $200,000 for such purposes. L. D. Hickey of Rainy River, Ont., has been appointed representative of the company.

The ratepayers of Napanee, Ont., recently decided to purchase the waterworks system of the town and also to acquire the canal and adjoining property which are located at W. D. Mulmer's lumber and box factory, the Gibbard Furniture Company's plant and the pumping station of the Napanee waterworks. The town now owns its own waterworks and has splendid sites for manufacturing plants.

The new pulp and paper plant, which E. W. Backus will erect at Kenora, will have a capacity of 200 tons a day, which will later be increased to 500 tons. It is understood that 1,000 men will be employed as soon as construction is well under way. The company will also erect a sawmill, employing 400 men, and build a railway 150 feet long, the whole ultimately representing an investment of $30,000,000.

The Goderich Mfg. Co., Goderich, Ont., through J. A. Baechler, the manager, recently purchased several tracts of timber. As this material lies outside the city, it was necessary to secure two large trucks to bring the logs in to the plant. This firm plan on going extensively into the manufacture of boxes and baskets and will rebuild their factory in the spring if suitable arrangements can be made with the city council.

A large limb of a tree was the cause of the sudden death of Dr. Robert Shearer, late of Milwaukee, on his farm near Walsh, Ont. The doctor, who had practiced medicine several years in Milwaukee, was cultivating in preparation for wheat sowing, and attempted to pull over the fence a large tree limb that had fallen on the field. That he was not able to get the heavy end across the fence but had fallen under or upon it, was evidenced by the fact that his breast was crushed and several ribs broken, death resulting instantly.

The aerial photograph department of the Bishop-Barker Co., Toronto, is to be moved to New York almost immediately. Major H. Maxwell, the head of this branch, stated that there were two main causes for this decision. Firstly, in Canada there was a lack of scope for this work, both on account of the comparatively sparse population and also on account of the long winter season which permitted the work to be carried out for barely half of the year. Secondly, the Canadian Government had been extremely apathetic and had not given them either the contracts or the encouragements which they had anticipated. In addition the Government is at present making certain experiments in aerial photography and many big private contracts are being held back until the results of these experiments are published.

In an effort to encourage reforestation of waste lands in Ontario, the Department of Agriculture of the Ontario Government is endeavoring to have a demonstration wood plot established in each township throughout the province. "If the township council," declares the departmental letter of instruction to agricultural representatives, "will purchase an area suitable for this purpose on a well-travelled road and have it properly fenced the Government will undertake to supply and plant trees to reforest such area and look after it in the early years of growth. Such an area of land should not be less than five acres or more than ten acres." It is made clear in the letter of instruction that all such demonstration wood plots will be vested in the township, and any profits which may ultimately accrue will go to the township.

A shortage of houses still continues in Toronto, and so far as the year 1920 is concerned it does not appear that the 5,000 houses, which a city official declares should be built every year, will be half reached. According to the permits so far issued not more than 1,470 have been erected or are in the

course of erection. This is not half as many permits as were applied for at the architect's department in 1919. These are exclusive of apartment houses, which dropped materially since 1914, owing to the war and the restrictions which increased the cost of construction. The largest number of dwellings erected in Toronto was in the year 1913. The permits taken out that year numbered 5,089, while the year previous saw the erection of about 80 apartment houses. Back in 1904 there were more houses built in Toronto than during any of the active years of the war. The number of permits for that year was 1,113, and with the exception of 1906, 1907 and 1908, there was a steady gain each year till 1913, when the peak was reached. The largest gain was 1,000 in 1909 over 1908. The average gain from 1909 to 1913 was 300. Apartment houses dropped from 80 in 1912 to 4 in 1919, and 4 so far in 1920.

Eastern Canada

Perron & Remieux, St. Hirmenegilde, P.Q., were recently registered as lumber dealers.

The mill and out-buildings of the Continental Lumber Co., River Charlo, Campbellton, N.B., were destroyed by fire recently. 13,000,000 feet of lumber also went up in smoke.

A. Bowser & Sons, Liverpool, N.S., sawmill operators, are installing machinery to manufacture boxes. The following equipment has been put in: band resaw and a cut-off saw.

The sawmill and plant of the Joseph McGill Shipbuilding & Transportation Co., Shelburne, N.S., has been completely destroyed by fire. The loss is in the neighborhood of $10,000.

Three Rivers Pulp & Paper Company, Limited, Montreal, Que., have been incorporated to manufacture and deal in lumber, timber, pulpwood and other forest products. Capital $4,400,000.

Millard Bros., lumber dealers, Liverpool, N.S., have recently equipped a box factory. The following machines have been installed: Cowan box-board matcher, C. M. C. moulder, C. M. C. surface planer, and a number of small saws.

The Davison Lumber & Mfg. Co., of Bridgewater, N.S., are installing in their box factory a 350 h.p. Waterous engine and a 56 x 16 Waterous R. T. boiler, making a battery of three in the plant. The capacity of the factory has recently been increased by about 30%.

The Lake St. John Pulp & Paper Co., Limited, Montreal, P.Q., have just been granted a federal charter with a capital stock of $4,000,000 and headquarters in Montreal. It is understood that they will erect large pulp and paper mills in the Lake St. John district.

Traders of Canada, Limited, Amherst, N.S., were recently granted a federal charter to conduct a general lumbering business manufacturing logs, lumber, timber and other forest products. Capital $100,000. Two of the incorporators are J. Cumberford, engineer, and A. G. McKenzie, barrister, both of Amherst, N.S.

The Bridgewater Shipping Co., Limited, Bridgewater, N.S., have recently purchased from the estate of the late J. F. Beeler, Lequille, N.S., machinery for manufacturing spokes and bent rims. It is the intention to instal this equipment in the Bridgewater plant and turn out a line of wagon spokes and bent rims. The officials of the company are R. Dawson, president; Dr. W. Trethewey, vice-president; E. Tupper, managing director, and H. S. Bandby, secretary-treasurer.

Sir Alexander Maguire, chairman of the Amalgamation of British and Canadian match-making concerns, who intend to establish a five million dollar plant in the vicinity of Quebec, is expected to arrive from England in the course of the present month when the site will be chosen and the work of excavation for the foundations of the factories will be proceeded with. It is admitted that the plant will be located within a radius of ten miles of Quebec City, and the plans for the new industry will practically duplicate a plant recently erected near Liverpool, Eng., which is considered the most up-to-date in the world. The production capacity will be about 100,000 gross a week and the industry will give employment to between two and three thousand hands.

Western Canada

The plant of the Western Canada Pulp & Paper Company, near Vancouver, is operating at full capacity with an output of 40 tons of sulphate pulp daily.

The Interior Lumber Company, at Smithers on the G. T. P., is now running full capacity of 25,000 feet daily. At that rate it can run for three seasons as there is ample timber supply close at hand.

J. D. Davis, inventor of the Davis Raft, visited the Alberni section of Vancouver Island recently. He went through the Beaver Creek district, being interested in securing piles. He said that the standing timbers he saw were as suitable for piles as any that he had seen on the North American continnt. e

The plans for the new office of the Hammond Cedar Co., at Hammond, B. C., have been accepted and work will begin on the new building soon. The office will be situated on the northeast corner of the mill property, which is a very desirable location for all business purposes and a very attractive location as well.

Twelve houses are being completed for returned men in the city of New Westminster under the soldier housing loan scheme of the Dominion Government which provides the funds through the provincial authorities. The first allotment of $60,000 is more than used up by the undertakings, so an additional $10,000 has been applied for by the city council, which administers the fund locally.

The Cameron Lumber Company and the Genoa Bay Lumber Company, controlled by the Cameron interests, are cutting 1,500,000 feet of railway ties for export to the United Kingdom. The Cameron Company has shipped a good deal of lumber overseas lately, but, of course, such shipments are hampered by the shortage of ships. Officials of the company state that the Australian market is not very active juht now.

Mayo Singh, head of the Mayo Lumber Company, a Hindu concern, has purchased all interests in the sawmill recently erected by the Tansor Lumber Company, Ltd., in the Cowichan district. After the sale, the mill was closed down immediately for repairs and a thorough overhaul. Considerable additions will be made to the plant which will be operated at capacity again. For its size the mill has an unusually efficient equipment and can be operated very economically. When it was purchased by the Hindu interests it was turning out 13,000 feet a day, but this output has been increased by the additions to the equipment made by the new owners.

Travelling by Airship Will Be Cheap

The airship will, in due time, become a form of transportation almost as economical as the automobile, if not more so," says Col. Jesse G. Vincent, of Detroit, Mich.

He declares that the actual cost of carrying a passenger a mile is already less in many airships that it is in an automobile, and predicts that the high price of machines which so far has placed aviation out of practical commercial use will soon be changed. With this, he declares, will come the preparation of landing fields in every little municipality; guide signs and signals will be provided which will make possible a great volume of air traffic.

"For many years the idea that the automobile would ever supplant the driving horse was doubted and people even refused to believe that it would replace the draft horse in trucking and farming. Nevertheless this also is coming to pass," he says.

"The same will be true of airships in a very short time. The fact that there are airships to-day which carry six passengers at a rate of 100 miles an hour, and make ten miles to the gallon of gasoline, proves that flying is not necessarily expensive. I know of no automobile that at the same speed will show such fuel economy, and, in fact, a six passenger automobile that will give ten miles to a gallon at 30 miles an hour is considered an efficient machine.

"The greatest factor in favor of the airship, however, is that it requires no rails or even a road to travel on. With the element of road building eliminated you have a tremendous saving which can be credited to airship travel. Landing fields can be easily and cheaply prepared and every little municipality will have one in the near future. There will be guide signs and signals to direct the aviators in landing in foggy weather, as well as in clear, and these are all that will be required for the coming airship. Tire cost also will be included in the saving, because the wheels run for only a few hundred yards in taking off and landing. Until recently the repair bills have been large because of the character of the machines and lack of skill in landing. This has now been almost entirely eliminated.

"So the matter will resolve itself to one of the first cost of the vehicles. The cost of airships is still beyond the reach of the average person, but that will soon be changed. There are a number of foreign airships to-day that can be produced by manufacturing methods like those which have made the motor car so cheap, and I predict that the automotive manufacturers will soon achieve as great a triumph with airplanes. With the airplane reduced to standardized manufacturing terms it immediately becomes a commercial possibility that will place it within the reach of men who will use it not merely for sport, but to save time.

"I do not mean that the airplane will ever supplant the motor car. It will be an ally rather than a rival. It is a fact that no form of transportation ever invented has become obsolete. There still remain certain activities in which the most primitive vehicle has its use and in which it will probably continue to serve until the end of time," concluded Col. Vincent, who is the vice-president of the Packard Motor Car Co., and has given close study to all transportation problems by land and air.

Destructive Fungi Threatens White Pine

That the white pine blister is firmly established in Minnesota has again been made clear to state entomologists and forestry officials by the finding of the destructive fungi on current and gooseberry bushes on the shores of Gull Lake, just north and west of Brainerd, and also in timber between Grand Rapids and Deer River, Itasca county, the latter infection being only about 15 mlles from the Minnesota national forest. These discoveries show that the disease, so far as the knowledge of the scientists extends, has spread from 20 to 25 miles north and from 35 to 40 miles west within a year. For a long time officials have suspected that the disease was much more widespread in Minnesota than was originally thought.

The state forester is in charge of eradication work, which consists largely in encouraging pine owners to protect their white pine stands before the disease does serious damage. This protection is given by uprooting currants and gooseberries, wild and cultivated, in and around white pines. When co-operation is direct between owners and the government, the latter defrays one-half the expense.

The disease was found this year in the two instances mentioned on currants and gooseberries. An extensive pine infection exists at Rush Lake and other smaller areas of infected pines have been located at Afton, Grasston, Harris, Pine City and Stanchfield. Infected currant and gooseberry bushes have been found in 13 counties prior to this year. The most significant infections are in Aitkin, Carlton, Crow Wing, Itasca and St. Louis counties, for they show that the disease is well advanced into the white pine areas and is threatening the state and national forests.

The utmost precautions are taken to prevent the spread of white pine blister rust to the pine lands of the Pacific northwest. The quarantine line against the shipment of currants and gooseberries is the border line between Minnesota and the Dakotas and the regulations are strictly enforced.

Most Desirable of All Possessions

There are multitudes of modern homes going up in this city or already occupied. It is a movement which should need no stimulation, and yet which deserves stimulation by all whom experience and observation qualify to give sound advice to their fellow-men, says the San Francisco Chronicle.

The possession of a home is the most desirable of all possessions. To the family which secures it is an assurance of safety. To the community at large it is the assurance of good government and social order. The disturbers of society do not operate from their own homes. They have no homes. They are wanderers and outcasts upon the face of the earth.

The acquisition of a home is by far the best form of thrift. It is an anchor, sure and steadfast, binding its owners to the soil of their country and to the society of which they are a part. Movable property may be lost or unwisely exchanged. Or it may be sold in a fit of depression and the proceeds dissipated. The home abides. If not yet fully paid for, it is a stimulus to effort and an incentive to save.

Homes cost more than they did. That is true. But the means of paying for them are correspondingly greater. Values may depreciate. That is also true, but in a growing city it is hardly probable. So may diamonds, for that matter, or, as we see, even Government bonds. But its value as a home will never depreciate, but, on the contrary, appreciate as its comforts are enjoyed and the tender associations of home life accumulate around it. Only as the family man gets a home does he fully realize that he is a citizen of the Republic. And the young man with his life still before him will find nothing so attractive to the girl of his choice as the prospect of beginning real life in a home which is hers.

If buildings depreciate land does not. Buy all the land which you can see the way to pay for and build on it such a house as you can. It is easy to add to a house. It may not be easy to extend the size of your lot. And it is only by a lot not fully covered with buildings that the sunshine, the fresh air and the garden can be assured.

Buy a home and buy it now while the means of paying for it are plentiful.

You have the Goods. Place your Lists with full particulars in our hands. We are in daily touch with all the Buyers in the United Kingdom.

PLEASE NOTE. We pay cash against all documents, and take the whole of the Delcredere risk on Buyers.

Camp Tea

This is a line that it's necessary to have good for the men in the camp.

The question of price also cuts quite some figure in these days of high costs. Now in this connection we have something good, even extra good, and at such a moderate price that we feel confident that it will appeal to you, if you could only see it.

Therefore write to us now to send you a sample of our Camp Blend tea, either black or mixed, which we are selling at twenty-nine cents—and we say without hesitation that it's the best tea value in Canada. Put our statement to the test.

(Continued on page 78)

The Algoma Range

A Steel Range for Camp use. Built especially for this purpose. It possesses features that are attractive in usefulness but not in beauty. A blunt, hardy Range with a wonderful record for Service.

The Algoma is built in three sizes—each one has the three necessities,—

(1) An Oven of ample capacity;
(2) A cooking surface, open and capacious;
(3) A Firebox, big yet economical.

The Body and Oven are made of Steel that will last. Each piece of steel is solidly rivetted to the other. Great care is exercised to ensure the complete rigidity of the entire construction.

The cooking surface is cast-iron, solid and thick; therefore the heat barely affects it. There are a variety of sections.

The Firebox is lined with weighty pieces of cast-iron. Strenuous usage may wear these linings away—when this happens, replacement is easy and the Firebox is made as good as new.

The Gates are the duplex pattern—two bars, each heavy and perfectly made. Simply operated with one shaker bar.

The Camp Comfort

A heater that radiates direct heat from the body when burning wod. Simple, effective and efficient. The body is filled with wood and paper the light applied and the heater is operating.

The Lumberman's comfort in cold days and nights. Heat radiates in all directions from the round steel body. In the coolest weather the atmosphere around the Heater is comfortably warm.

The "Camp Comfort" is built of well tested materials that can withstand rough usage. The two ends are heavy cast-iron and the door is so large that huge chunks of wood can be fed to the Heater with ease.

The body sits on four cast-iron legs which fit into rigid cleats. Side or top shelves are supplied and are very convenient for temporary use in keeping foodstuffs and liquids at a high temperature.

The "Camp Comfort" is a Camp Heater. It is simply made. It produces the required results—See it.

McCLARY'S ability to make "Good Stoves and Cooking Utensils" is recognized by all users. Seventy-three years solid experience in the manufacture of Stoves gives us the machinery and skilled man power to produce highly specialized articles. These two Stoves are good samples of our best Foundry productions.

BEAVER QUALITY

To Beaver Board Dealers

You already know Beaver Board. You know its pronounced success in its particular field. You know its reputation for quality. Now Beaver Board is expanding into allied lines—enlarging its field for better service.

Vulcanite Roofings have been selected as a "Beaver Quality" product because of their merit. On proven goodness and quality of product, sales have increased again and again until Vulcanite's manufacturing facilities are now larger than any single roofing manufacturer.

Now Vulcanite is to be manufactured in Canada. Vulcanite goodness will be identified by the well known Beaver Quality trade-mark. Distinctive and patented roofing features, heretofore never offered to the Canadian trade, will be available through Vulcanite's exclusive patents.

Write for further details of this new "Beaver Quality" product today

21 GeBott Band Wheel Grinders Sold during the first six weeks of 1920

From Trinity, Texas to St. John, New Brunswick—over from far off Australia came orders. Especially pleasing perhaps was one from the Frost-Johnson Lumber Co., of Nacogdoches, Texas, which marked their third machine from us in the past two years.

This we consider an excellent testimony to the merits of GeBott Products. May we send you catalogues and full particulars.

FIRE BRICK

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel," "St. Marys," "Keystone" and "Rotex"

THE ROOFING OF TO-DAY

In fact, they have already arrived:

In 1918 we doubled our output of Asphalt Slates over 1917, and 1919 was double that of 1918.

There is going to be a big and growing business in Asphalt Slates done by lumber yards. We have a number of lumber dealers now who are handling our line and finding it a brisk seller and a good profit earner.

Brantford Asphalt Slates

You will find it quite easy to sell this fire-resistant, economical, durable roofing material at the same time you are selling the lumber for the house, barn or other buildings. Brantford Asphalt Slates are permitted to be used in the congested districts of cities where the most rigid fire protection by-laws are in force. This is an advantage that adds greatly to their saleability.

In addition to this, Brantford Asphalt Slates add beauty to a building. They are in soft, harmonious red and green shades—and the crushed slate surface gives a roof a distinct and artistic individuality.

Brantford Asphalt Slates are easily handled and quickly laid. They are in Individual size shingles.

Brantford Asphalt Slab Slates are four shingles in one. They are particularly suitable for large roofs, because they save time and labor in laying and require fewer nails. When laid the roof has the same appearance as when covered with the individual asphalt slates.

Brantford Crystal Roofing is the same material in Rolls. It is a big seller for barn roofs.

We suggest that you put in a small stock to try out the line. Lumber dealers who have done so have found that Asphalt Slates do not conflict with their regular business. Instead they have found that being able to supply the Asphalt Slates gets them extra business.

We would like to send you samples prices and information.

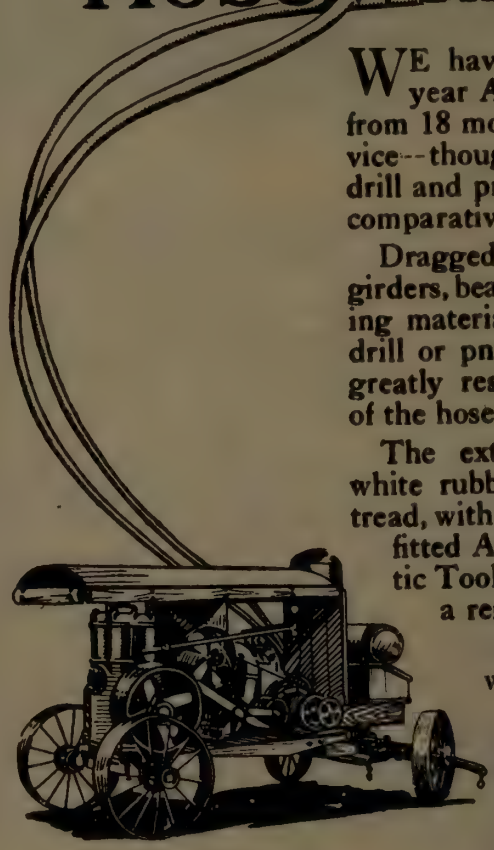
Hose Which Resists Wear



WE have records of Goodyear Air Drill Hose giving from 18 months' to 2 years' service--though the life of most air drill and pneumatic tool hose is comparatively short.

Dragged over rocks and steel girders, beaten by ore and building materials, the cover on air drill or pneumatic tool hose is greatly responsible for the life of the hose.

The extra heavy cover of white rubber, tough as a tire tread, with which Goodyear has fitted Air Drill and Pneumatic Tool Hose resists wear to a remarkable degree.

Inside this hard-wearing cover is a special, oil-resisting inner tube, and a fabric of such strength that Goodyear Hose is very much lighter than ordinary hose of the same strength.

In the same painstaking way, Goodyear has solved each individual hose problem—whether for steam, water, air, acids, or other substances. The creation of hose which would successfully withstand the strain of *present* industrial conditions was the task Goodyear scientists faced and solved. The hose problems in your plant can be greatly reduced with the help of Goodyear data and a Goodyear trained man. This service is without charge. Just phone, wire or write the nearest branch or Goodyear Mechanical Goods Service Station.

SAVES TIME—SAVES MEN

Never before has man power been so badly needed—never before has time saving meant as much in the way of labor saving.

Yates Type G-2 Ripping Saw

is one of the best tools made to conserve man power. Its solid construction, excellent design, and freedom from mechanical troubles make it a favorite wherever used. Dozens of them are installed all over the United States and Canada. The increase in sales of this machine is proof of its popularity.

Why don't YOU send for descriptive literature?

ATKINS STERLING QUALITY SAWS

Smithing, Hammering and Blocking Saws

No mill saw could do the work expected of it until it goes through the *Smithing, Hammering and Blocking* processes. Smithing removes the lumps in the plate as seen under a straight edge, Hammering equalizes the strain in the plate, and Blocking provides the tension for the speed the saw is to run. These operations are performed in the Atkins factories under the supervision of experts—men long in the service—men who know; that's why *Atkins Saws* have built a reputation for quality.

Fire Destroys Large Planing Mill

A heading like this is not an uncommon sight in the daily press.

The description of the fire, tells that it began by a terrific dust explosion. Then follows the story of the hopeless fight of the crew to overcome the flames, which were fed by the large quantities of shavings that littered the plant.

A disaster such as described cannot occur where

Picture shows Berlin Planer with six cutters in the Canadian Pacific Railway Co.'s Angus shops. Actual working conditions are here shown. Note absence of shavings and refuse.

Sturtevant
(REG. U. S. PAT. OFF.)

Planing-Mill Exhausters

are installed. Will you let this risk of explosion and fi re hang like a menace over your plant?

A Sturtevant Planing Mill System allows no refuse to gather and form a fire risk.

Write to-day fo rour Special Bulletin No. 261 C. which tells of the system in use in Canadian Mills.

KLIM Saves You Money

There is no Waste

Klim is even more economical than its price indicates, for you can use every bit; there is no waste. In powder form it will not sour in Summer nor freeze in Winter. Use it from the tin as you need it. The last spoonful will be as sweet and fresh as the first.

Klim is separated milk in dry white powder form. The purest and safest way to have it. In 10 lb. tins—six to the case—at all wholesale grocers and supply houses.

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

The Moreau Barker

What it does—

How it does it

If we would emphasize two features of the Moreau Barker which have insured it's success, they would be: it's economy—and the smoothness with which it works.

Only ten horse power is required to operate it.

Guaranteed daily capacity of 30 cords.

It handles logs from 3 in. to 50 in. in diameter, while the tension spring which controls the wheels over all irregularities, accounts for the smoothness with which the operation is performed.

You cannot do better than to employ the Moreau Barker. Let us send you full details.

RESPONSIBILITY

At night—when the people of your town are taking recreation—in places of amusement or in their homes—this is the time when the safety of your Municipality weighs most heavily on those responsible for its protection from a great fire.

The unexpected fire comes to every town and too often the distress and loss of life and property, left in its wake, cannot be reckoned.

The conscience of those responsible is clear if a fire alarm box is at every main street intersection. The

Northern Electric
GAMEWELL
Fire Alarm System

is the proven quickest and most positive known means of alarm. The telephone cannot compare with it for speed and accuracy. Instantaneous in its action it utilizes precious seconds—no time is lost. In most cases, the fire is under control from its infancy.

The fact that 99% of the fire alarm systems in Canada are Northern Electric Gamewell has saved the Dominion untold thousands of dollars and many lives.

If we can be of service to you in this important matter, call on us.

DUPLEX TRUCKS

BUILT FOR BUSINESS

IN a run from Los Angeles to El Centro via San Diego with a 3060 pound load, it made 267 miles in 8 hours 26 minutes—an average speed of 34 miles per hour. It went the full distance without a stop and the speed limit was observed in all towns in transit.

Another Limited running from New Orleans to Baton Rouge, 124.6 miles, carrying 3750 pounds, made the distance in 6 hours, 55 minutes running time.

The Only Motor Truck With All These New Features In It

Read These Features—Think What They Mean—And You Will Agree That Here Is a Truck That Must Be a Wonderfully Good Investment

YOU know what's the need of the hour in trucks. If you have been a truck user for any length of time you have probably had some experiences that have given you an entirely new angle on motor trucks and their value.

You don't need to be told of the shortcomings of the old truck standards, but you probably are tremendously interested in learning about the real features of a truck that you can depend on.

It is on this basis of honest value to you and to every other user that the Duplex Limited is made and sold.

Do you know that the Duplex Limited is probably the fastest and most rugged truck of its size and capacity in America.

Do not make the mistake of thinking that this truck is merely a speed truck. It isn't. It's a strong, rugged truck built to carry 3000 to 5000 pounds and it gets its speed from motor power—not gear ratio.

Built and designed for pneumatic tires—standard tread—it takes roads as they come and averages express train speed. It has probably the most perfect balance ever developed in a truck. Friction is saved everywhere possible by using ball bearings throughout. Scientific tests show that it takes 29 times less power to move a given load when ball bearings are used as against any other type. This wonderful balance and almost frictionless running makes a big saving in gasoline.

You get further saving in gasoline because the truck has complete electric equipment, including starter. That means that the driver will shut off the motor when the truck is idle and he will save you from 2 to 4 gallons a day that way alone.

The patented Duplex Spring Suspension for the radiator allows ¼-inch sideways and 1-inch up and down movement before the radiator touches anything solid.

This eliminates at one stroke the greatest single source of radiator leakage and consequent motor damage from overheating.

Put your hand in the crank case of a Duplex Limited that has run over dusty roads and notice that there is no sand or sediment in the oil. This is due to the fact that there is a special flapper valve arrangement that keeps the sand and dust out of the lubricating system.

See the Duplex dealer near you—he will give you any demonstration you want and let the truck speak for itself. He is a responsible man—he will not exaggerate and he stands ready to back up, as we do, every truck that bears the name "Duplex." Get the facts about the Duplex Limited.

Write us direct for details about the two wonderful runs of the Limited and also for free copy of "DUPLEX DOINGS," the Truck Users' Magazine.

For heavy duty, the Duplex 4-Wheel Drive is everywhere admitted to be in a class by itself. Power in every wheel, 3½ tons capacity—it keeps going as long as the wheels touch ground and for heavy work is without question the most economical truck in America

"MARSH" GASOLINE LOG LOADERS AND SKIDDERS

These little machines are regular "giants" for work, and are capable of doing far more than their light compact size would indicate.

Take, for instance, the 10 H.P. size. When used for loading this size machine will load any log up to a ton and a quarter in weight, and at the rate of over one thousand a day. When used for skidding it will drag in the logs from any distance up to 800 or 1200 feet according to the nature of the ground.

This 10 horse power size weighs only 1500 lbs. without the engine, and is easily moved from place to place. It will work all winter, right through the coldest weather.

We also make other sizes—in fact we make just the right size for your work.

Transmit 100% of Your Power

Why pay good money to generate power and then employ a poor belt that will only transmit a fraction of that power.

If you equip your mill with Goodhue Belts you can transmit 100% of the power generated.

Goodhue Belts stretch 15% to 25% less than other belts and have just the right amount of "cling" on the pulley.

SHAUGHNESSY BUILDING MONTREAL

PUT YOUR PROBLEM UP TO US

We are specialists in building locomotives. We build all types and sizes, also all kinds of repair parts for locomotives and tenders.

Our experience puts us in a position to give you expert advice as to what particular type and size of locomotive is best suited to your needs.

Put your locomotive problem up to us.

MONTREAL LOCOMOTIVE WORKS, LIMITED

DOMINION EXPRESS BUILDING, MONTREAL, CANADA.

CLIMAX Improved Geared LOCOMOTIVES FOR WOOD AND IRON RAILS

A 62-ton Climax Locomotive Designed Especially for Heavy Logging Work.

Climax Locomotives are successfully operated on steep grades and sharp curves. Any weight or gauge. Locomotives in stock for immediate shipment. Get Catalog "H."

CLIMAX MANUFACTURING CO., 313 W. Main Street, CORRY, PA.
VANCOUVER MACHINERY DEPOT, LTD., VANCOUVER B. C.

MILLMEN

and others interested in Steam Power Plants

Whether you contemplate building a new or repairing your old power plant it will pay you to investigate our recently patented **Steel Water-Jacket Furnace.** This brickless furnace is built of heavy steel plates, spaced apart, forming a water jacket all around, carrying same amount of steam as boiler. Splendidly adapted for use of portable mills as it is easily moved and placed in position. Burns sawdust or mill refuse of any description, while at the same time it generates one hundred per cent. more steam than will any other type of furnace. Conforms to any style or type of boiler, either straight draft return or water tube.

Do you, or do you not want to save half your coal? It's up to you. Ask for particulars.

DEMING BROS.,

Woodstock - New Brunswick

No other machinery in the world puts so great a strain on its bearings than does the machinery used in the lumber industry.

No other babbitts made, stand up better in lumber machinery than do

SYRACUSE BABBITTS

Use Aluminum Genuine Babbitt in your lumber gangs. For all round service, use Manganese Anti - friction.

Write us for a detailed description and prices of both these bearing metals.

Take up your bearing problems with us. We will be glad to advise you.

SYRACUSE BABBITTS

FOR DURABILITY

United American Metals Corp'n

Makers of Syracuse Metals

Meserole Avenue and Diamond Street, Brooklyn, New York

We also make

SYRACUSE SOLDER

STANLEY PROCESS PHOSPHOR COPPER

STANLEY PROCESS PHOSPHOR TIN

SYRACUSE WHITE BRONZE

and we deal in

TIN
LEAD
ANTIMONY
COPPER
ZINC

We invite correspondence on above metals.

The Machine That Made a Record in a Recent Lath Cutting, 10 Hour Test

Four Hundred Sawmills in the Dominion are to-day using this machine.

It has all the latest improvements and for quick, clean work has no equal.

The Payette No. 1 Bolter and No. 2 Lath Mill will cut, count, tie and pile 128,350 laths in a period of ten hours. The above consisted of 4 foot laths, 1½ by ⅜ inches, and constitutes a record in rapid lath cutting.

If you are not using a Payette No. 1 Bolter you should be.

Shall we send you full particulars and prices?

The True Steel

Characterizes

Arrow Head Saws

(Curve Ground)

Vanadium Steel

They are always equal to the severest tests to which a saw is subjected, and will continue to keep the sharp edge after long use where other saws will lose their keenness. This fact is due to the excellent temper of Vanadium Steel. Use Arrow Heads in Your camp.

Rubber Goods FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P.M.S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

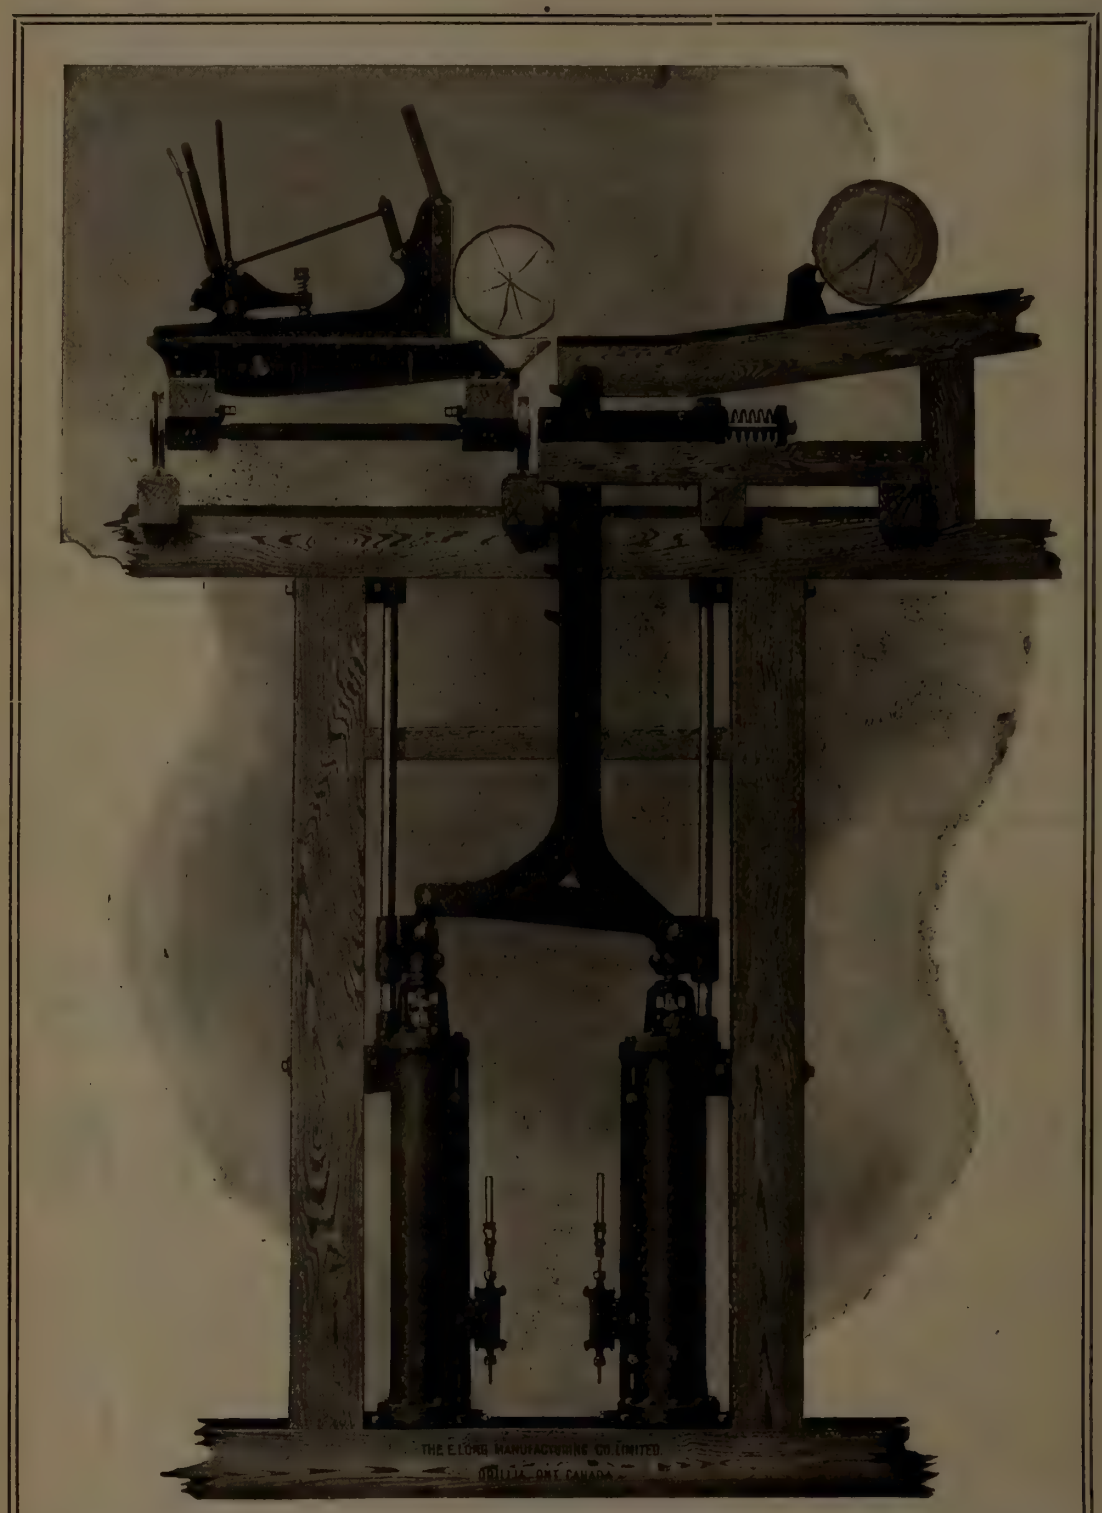
A Tremendous Saving



Where logs have formerly been handled by hand or the old fashioned oscillating niggers, this **Stationary Cylinder, Steam Nigger** will effect an enormous saving to the mill man.

It occupies less space, there being no horizontal bar to come in the way of conveyors or feed ropes.

Second: the cylinder being stationary, permits all piping to be rigid, and allows lever connections between valves and lever, to be installed without any lost motion, thus guaranteeing the sawyer perfect control of the entire machine. The working strain instead of coming on the cylinders, heads and trunions, comes on the heavy cross heads and slides, removing all strains from the joints, and for this reason requires a minimum amount of packing.

Third: the machine is contained, there being no jumping or rocking of the machine, when in motion. The two upright timbers, used to support the cylinders and slides, have a tendency to stiffen the mill at a weak point, and prevent the tooth bar from pounding the carriage track timbers out of alignment.

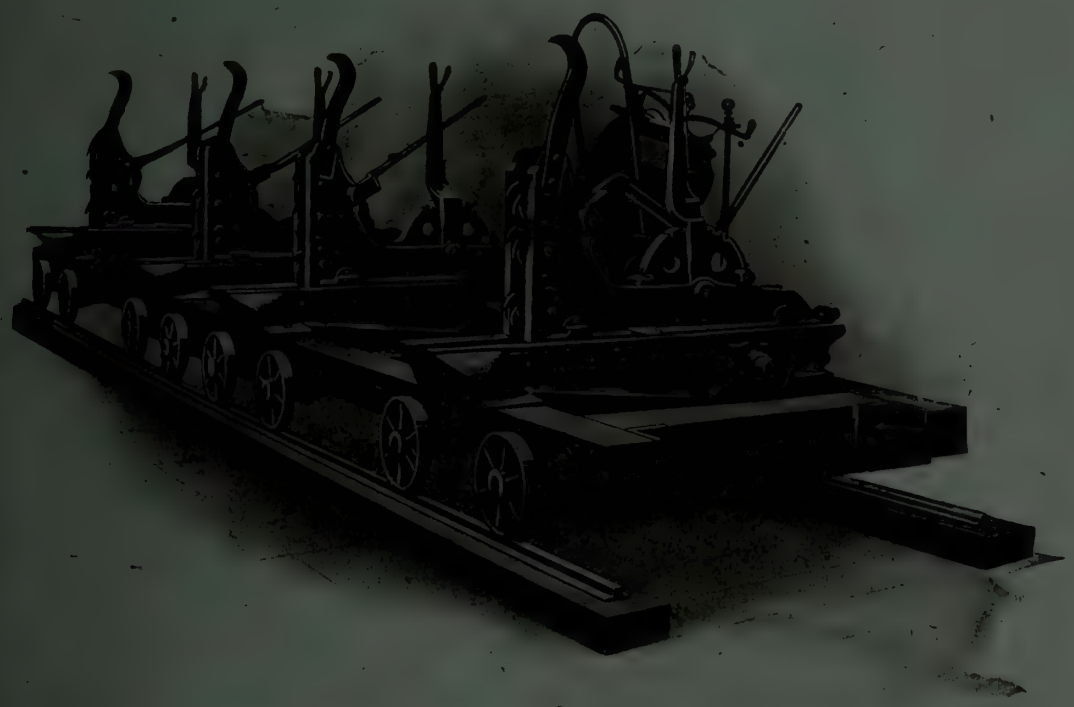
Waterous Steel Carriages

for

Fast Cutting Service



WATEROUS Steel Carriages are being used in the largest, best equipped Mills in Canada today. Built for fast cutting, for accuracy, and to give operating service, they are carefully put together of the best materials obtainable—they stay right.

Increase in cutting efficiency and the increase of cutting speed have been taken care of in the design of these carriages. Improvements in the knee and head blocks and in all moving parts to overcome lost motion; a new setworks—our No. 4—(which may be attached to Steam Setter, or be replaced by trout Power set works) which absolutely prevents and will not develop slack; new style, inserted tooth; quick and easy operating dogs; a friction receder that is operated with the Setworks—these special features are what keep the Waterous Steel Carriage at its place at the head of the list of "Up-to-date Sawmill Equipment." We build our Steel Carriages in sizes of 36″ to 72″ knee opening, in any length and with any number of head blocks—screw or rack motion. They are adaptable for rope or gunshot feed.

Waterous

BRANTFORD, ONTARIO, CANADA

MOLSONS BANK BLDG., VANCOUVER, B. C. WINNIPEG, MAN.

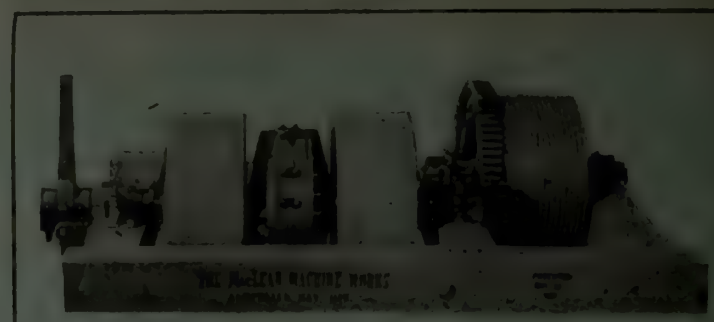
Mill Owners

Whether you contemplate building new or repairing the old mill, it would pay you to investigate the merits of our Friction Feed Works which overcomes the trouble experienced with the ordinary friction.

While it possesses the speed and power of the steam feed, it can be operated by anyone without danger of accident.

We are now building this machine in two sizes and can supply you with a size that will meet your requirements.

When writing for particulars, state capacity of mill and weight of carriage.



THE MACLEAN MACHINE WORKS, Campbell's Bay, Que.

Not altogether what we say, but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

A Fast Feed Matcher Head scientifically designed for matching from 200 to 800 lineal feet per minute.

The SHIMER Fast Feed Expansion Matcher Head
With 12 High Speed Bits

The head is built heavy where the strain is and is devoid of all angles or openings, which lessen the wind resistance and cannot block with shavings.
These advantages, combined with the Shimer expansion feature, make a combination that is hard to equal.
The straight knives are long, assuring length of service, while the circular knives can be set back, and the straight knives jointed; in this manner the whole width of the straight knives can be jointed at the one setting.
The circular cutter is then brought to its proper location.

The Cheapest and Best Head on the Market. WRITE FOR PRICES

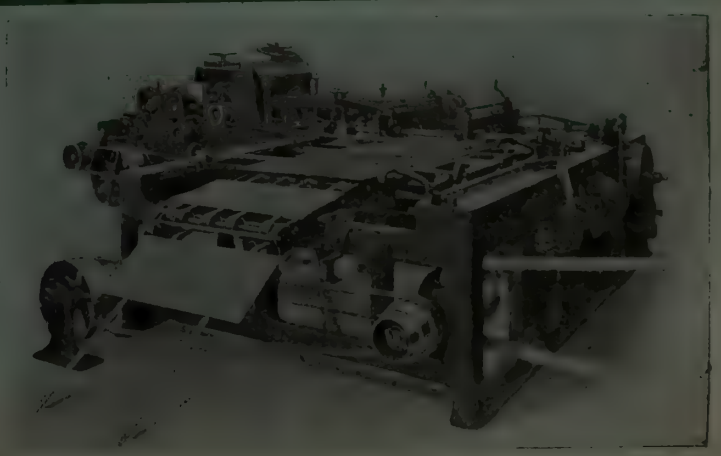
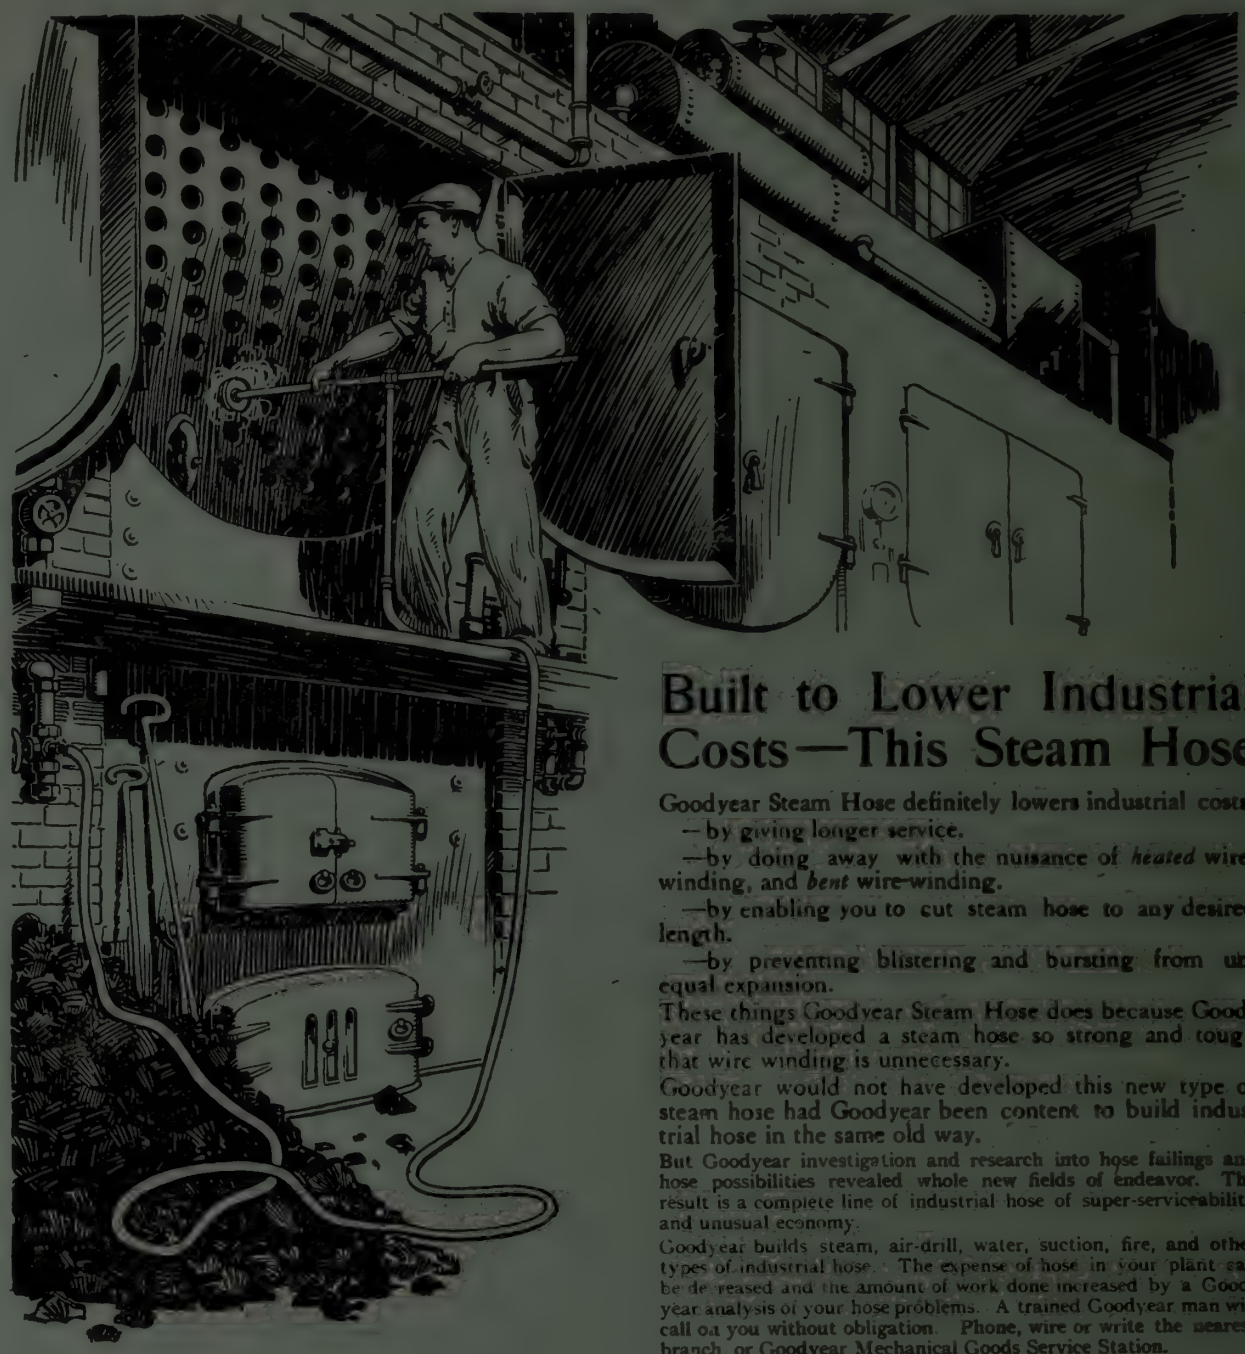
BOLINDER'S Automatic Box Board Machine

A machine that converts narrow lumber into high grade box shooks at a minimum cost.
The machine takes rough boards and Planes, Dovetails, Glues, Joints, and makes up finished Box Sides and Ends to exact dimensions required.
The entire operation is performed automatically from the time the boards are fed into the machine until the finished box side or end is delivered.
Capacity up to 12,000 S. Ft. finished shooks per 10 hours, with only two men at the machine.



Swedish Steel and Importing Co., Limited
SHAUGHNESSY BUILDING, MONTREAL



Built to Lower Industrial Costs—This Steam Hose

Goodyear Steam Hose definitely lowers industrial costs:

—by giving longer service.

—by doing away with the nuisance of *heated* wire-winding, and *bent* wire-winding.

—by enabling you to cut steam hose to any desired length.

—by preventing blistering and bursting from unequal expansion.

These things Goodyear Steam Hose does because Goodyear has developed a steam hose so strong and tough that wire winding is unnecessary.

Goodyear would not have developed this new type of steam hose had Goodyear been content to build industrial hose in the same old way.

But Goodyear investigation and research into hose failings and hose possibilities revealed whole new fields of endeavor. The result is a complete line of industrial hose of super-serviceability and unusual economy.

Goodyear builds steam, air-drill, water, suction, fire, and other types of industrial hose. The expense of hose in your plant can be decreased and the amount of work done increased by a Goodyear analysis of your hose problems. A trained Goodyear man will call on you without obligation. Phone, wire or write the nearest branch, or Goodyear Mechanical Goods Service Station.

Yards: Cairo, Ill.

Buy some of the best woods and the most lasting; namely, CYPRESS. We have reasonable prices and can ship you at once from our Cairo yard any thickness and any grade. Remember you can buy more reasonable now than you can later.

WE ARE THE CYPRESS SPECIALISTS

When in the market for "CYPRESS" remember "GREGERTSENS"

If You want the Best Value in Lumber Obtainable in the Mountains, Your Choice Should be

Golden Spruce

GOLDEN AIR-DRIED SPRUCE is unequalled for your requirements in Boards, Shiplap, Shelving, Flooring and Siding, and you can rely upon getting DEPENDABLE GRADES.

EASTERN RETAIL DEALERS will find 1 x 8 GOLDEN EXTRA SELECT SPRUCE BOARDS an exceptionally good seller. Can be worked to any pattern desired. Supplied either 3/4 or 25/32" thickness. Try some.

We also manufacture Fir and Cedar.
Spruce, Fir and Cedar Lath.

Just another reminder—Our stock always comes to you bright, clean, and newly milled, being run through the planing mill at time of shipment.

With a daily nine-hour cutting capacity of 180,000 feet, and a stock of 10 to 20 million feet at all times, we are in position to give prompt shipment. Urgent orders given special attention.

HARDWOOD LUMBER

THIRTEEN BAND MILLS
SIX PLANING MILLS
ELEVEN FLOORING UNITS

ANNUAL CAPACITY:
130,000,000 feet.

In a former issue we told of the hardwood stumpage which we have from which to produce lumber to supply our patrons; probably, however, those who purchase lumber would prefer some data as to our production of lumber rather than in regard to our ownership of trees.

We produced, during the first six months of 1920:

FOURTEEN MILLION feet of poplar lumber, including
1,000,000 feet of panel
2,472,999 feet of 1s and 2s
3,151,831 feet of Nos. 1 and 2 common

TWENTY-SEVEN MILLION feet of oak lumber, including
2,288,455 feet of quarter-sawn stock
4,916,456 feet of 1s and 2s
6,467,522 feet of Nos. 1 and 2 common

We produce also the other varieties of stock in poplar and oak which naturally would result, accompanying the manufacture of items above listed.

In addition to our production of poplar and oak, we manufactured millions of feet of basswood, ash, chestnut, hemlock and other varieties of such hardwoods as grow in the choisest sections of the Appalachian hardwood areas.

During these first six months of the year, we manufactured 11,567,253 feet of the choicest hardwood flooring, strip and parquetry, plain and quartered.

We produce standardized products.

We render a service possible only from

The Belching Smoke-Stack

by

T. K. D.

It may be within the scope of the practical economist to take cognizance of the problem of perpetuating such national resources as Providence has given this country, in the form and outline of our great timber areas.

Of Conservation of Forests we have heard much, learned little, and cared less.

But as a consequence of the very considerable monetary interest recently allocated to the development of our forest resources, we must, as investors in this rapidly-growing industry, hear more, learn more, and care more. We have capitalized the industry to the extent of several hundred million dollars, and having assumed this huge financial stake in the comparatively new business of paper production, we want to know what Conservation means when translated into the language of Capital Investment.

When we garner an acre of wheat, we dispose of the wheat and retain the acre. When we burn a ton of coal we deplete a valuable national asset to the extent of one ton of coal. That ton of coal boils down to productive heat-units, and goes up in smoke. When we cut a cord of wood—what happens?

Until posterity (and our own immediate interest) hove in sight, we cut and slashed each cord of wood and passed on to the next. The lumberman started the game in haste and there was little leisure in the operations of paper-makers who came in later. Depletion was so rapid that by 1908 it was found imperative to exercise more care in the cultivation of new woods and the protection of those woods yet uncut.

Scientific methods have been adopted for re-forestation and fire protection, and much good has been accomplished in the past ten years. The Quebec Legislature has given material help in some directions, while allowing destructive influences to prevail in others.

The business, the very serious business, of Forest Conservation is, however, still in its infancy, and it is necessary, on behalf of the heavy capital investment, as well as from the national standpoint, that practical rather than theoretical plans for Conservation be adopted as a definite policy for the guidance of lumbering and paper-making operations.

THE TWO ALTERNATIVES

"A Tree for a Tree,"—"A Life for a Life"—is the slogan of some of the professionals. These gentlemen would "seed" on neutral ground compensating tree for the tree led to the slaughter. They would start a new forest, all their own, on adjoining ground not necessarily designed by Providence for timber bearing. It takes 30 seconds by the clock to bring a tree to earth, and 40 to 50 to 100 years to bring its offspring to maturity. For every-denuded acre another acre, by this plan, would be pressed into service on hill and dale, both far and near.

As can readily be imagined it costs money to "seed," and as each seed bursts into infant plant, into youthful tree, and by stages to maturity, the tied-up capital cost per tree compounds at a fearful rate over a period of 40, 50 or 100 years. Obviously, this makes the "Tree for Tree" expediency an affair of infinite cost, infinite labour and infinite risk of destruction by the scourge of fire so prevalent in this country.

Other professionals urge, as the best method of Conservation, a system of selection of cut, plus elaborate fire protection, plus aid to nature's own service in the practice of re-forestation. For many reasons the advocates of this latter course have the more practical, the more sensible solution of the problem of Conservation.

An article which appeared in the "Canada Lumberman and Woodworker," in February last, entitled "Wantonly Wasting Many Growing Forests," was most instructive and well worth consideration of all who are interested in the conservation of our forests.

In respect to European methods of Forestry, it is interesting to note that the Premier of Quebec, immediately upon taking office, declared his intention of sending some members of the Provincial Forestry Department to Scandinavia to study forestry as practised in that country.

It may be opportune to mention that, realizing the importance of the forest to their industry, the Wayagamack Pulp & Paper Company, Limited, some five years ago sent a McGill Science Graduate to Scandinavia to pursue a course of practical work under some of the leading Foresters in Scandinavia, finishing with a course at the Royal School of Forestry at Stockholm. This student had the good fortune to spend many months in the forests of Baron Mannerheim of the Kramfors Company, where conditions are very similar to some of the extensive Canadian plants. Baron Mannerheim, by the way, is well known to pulp and paper makers in Canada, and recently was a visitor to this country. This educational work brought out the fact that, while a certain amount of re-forestation by planting is practicable, and is carried out in certain especially adapted parts of Europe, it had on the whole been abandoned in favour of the adoption of good, practical and scientific methods of wood cutting, draining, thinning out and helping natural seeding of the forests.

Nature is a Great Healer. It is estimated that in the course of the past 200 years fully 80% of the timber resources of the forest areas of Canada has been destroyed by fire—and Canada to-day is the White Man's Hope for uninterrupted delivery of the daily newspaper, with one billion cords of coniferous pulpwood species standing erect awaiting the call of the pulp consumers.

Fire Protection in deed and not in need; a comprehensive aid-to-nature plan to enable the trees to propagate their species, in addition to seed planting on parts of cut-over lands, offers the only solution that is practicable, economical and certain of definite and profitable results.

THE ROOT OF THE EVIL

Destruction by Fire is the root of the evil of forest depletion. Fire will wipe out in one short week more fine timber than the whole producing machinery of the Dominion could cut down in the course of a ten-year period. That being a fact, is it not the imperative and immediate duty of the Provincial Governments to take every conceivable precaution? Much advancement has, no doubt, been made in fire protection, but curiously enough the Federal Government's own steam locomotives and the Provincial Government-urged colonists are the greatest source of danger to our forest areas. Locomotives are allowed to belch live coal into inflammable material in the Northern parts of Quebec and Ontario, and the would-be-farm-settlers buy the best of timber lands, at 50c per acre, cut the timber, sell and ship it to United States mills, and jump the claim. In the process of masquerading as a potential farmer, this gentleman only too often cleans up the debris from his lumbering operations by means of more or less regulated bonfires.

Thus we have the two chief Causes of forest destruction located, but not cornered, as the Effect has still a wide range of freedom for dangerous work.

If there is danger from live coal, let us get rid of live coal. Electricity in the Dominion is cheap enough, in all conscience. The capital expenditure for electric or for oil-burning locomotives would be saved in one twelve month period. Electric storage locomotives with the necessary generating stations as used by the New York Central, surely could be installed on those parts of the railway systems which run through the richest of our forest areas.

Let us put the lid on the belching smoke-stack, and if timber areas are the only lands in this province available for the so-called colonist, the colonist should be urged to go elsewhere to farm, without the preliminary back-aching process of stump extraction.

"Open Kettle" Registered

Extra Fancy Molasses

We know you serve Molasses to your Lumberjacks. Have you ever tried our "OPEN-KETTLE" blend? We have a way of blending several kind of syrups and molasses into one, giving the right taste.

You probably know that Blended Tea has a better flavor than unblended. You will find that same applies to MOLASSES. Of course not all Blended Tea tastes alike and not all Blended Molasses would appeal to you.

Read what Dr. Milton Hersey (Industrial Chemist) has to say:

"We have tested and analyzed a sample of your "Open-Kettle blend fancy Molasses" and find it made of a good quality of syrups and molasses, free from any impurities. It has a high food value. Our tests indicate it is well adapted for eating and table purposes."

We suggest that you give us a trial order for a carload of our "OPEN-KETTLE" Blend at $1.00 per Im. Gal. x F.O.B. Cars Montreal.

Samples will be mailed on request.

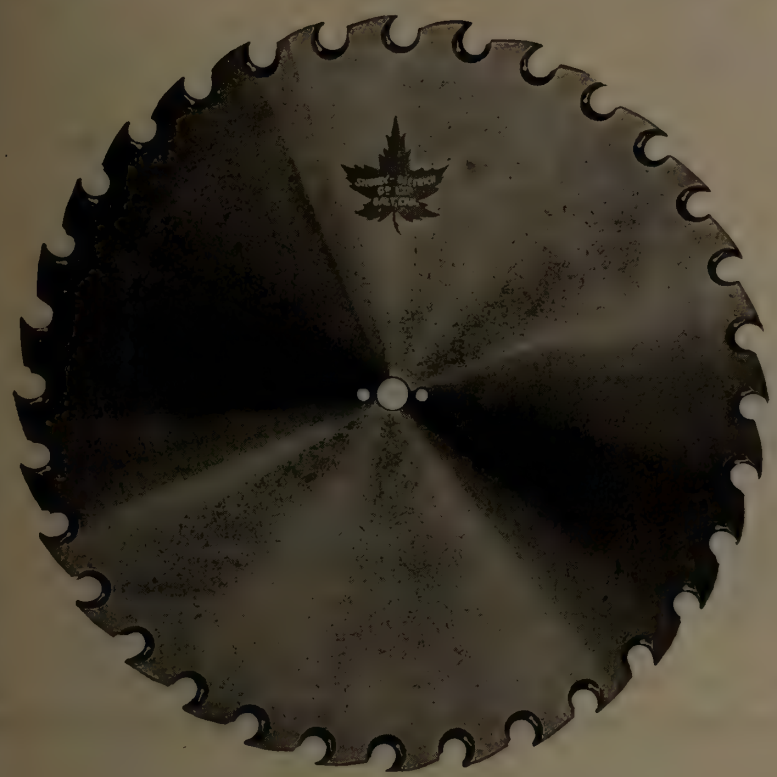
Maple Leaf SAWS



Maple Leaf Circular Saws are made of Special High Grade Steel, accurately ground; have hard-tempered center which makes a stiff blade that will stand up under the most severe conditions, and is less liable to push over in case of accident.

Let us prove it to you if you have not discovered it already.

EVERY SAW GUARANTEED.

Cross-cuts, Band Saws, Shingle Saws, and Everything Pertaining to Saws for Lumbermen

The Largest ALL Canadian Saw Manufacturers

Shurly Dietrich Company
Limited

Ottawa Vancouver Galt

Macdonald Lumber Company

Invincible Hewers of Wood

Huther Brothers Saws stand supreme in their field. So complete is this wonderful line evolved from fifty years "knowing how" that we can offer

A Circular Saw for Any Kind of Woodworking

no matter whether it be a Mitre Saw, a Dado Head for cutting perfect grooves with or across the grain, Band Saws, Solid Tooth Circular Saws, Lock Corner Cutters, or any one of the other numerous varieties in our line.

Our catalogue showing this complete line will be highly valuable to you as it will acquaint you with many saws that will increase your production and bring down your overhead cost.

Write us for Catalogue and Price List.

HUTHER BROS. SAW MFG. CO. INC.
ROCHESTER, N.Y.

SIMONDS SAWS

Tempering and straightening under pressure —vital factors in the long wearing quality of SIMONDS SAWS.

They saw fast and smooth, stand heavy feed under strenuous mill conditions.

All kinds of Mill Saws—

Solid Tooth Circulars	Gang Saws
Inserted Tooth C. O. Saws	Edger Saws
Inserted Point Spl. Saws	Shingle Saws
Wide Band Saws	Crescent Ground Cross-cut Saws

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice, at Buffalo, N. Y., under the Act of Congress of March 3rd, 1879.

Vol 40 Toronto, November 1, 1920 No 21

Getting New Ideas in Lumber Line

There are always times when business becomes quiet and every bit of trade that is secured has to be fought for vigorously. It is in periods of depression or stagnation that the average representative of a lumber firm becomes a real salesman instead of a formal order-taker. He has to use every resource, argument, power of persuasion, gift of knowledge and, perhaps, of prophecy to make a prospect buy on a failing market or to convince him that now is the time to stock up if his yard is not well filled. At all times the intelligent, aggressive and reliable salesman, whether he represents forest products or any other line of merchandise, is able to furnish pointers, provide suggestions and offer worth-while ideas or advice.

The lumber retailer, or dealer in any other commodity, who thinks because business is now passing through a temporary lull or calm, that salesmen are intruders or trespassers and should keep away, is seriously and shortsightedly mistaken. The present is no time to sidetrack callers or to be scant on courtesy or shy on consideration. Salesmen can be of great service to any member of the lumber or any allied trade.

Recently an interesting article appeared on "How I Keep Getting Fresh Ideas." The writer was Mr. J. B. Pearce and his observations are worthy of sympathetic regard on the part of every dispenser of wood goods. One reason, he says, why so many buyers snap the salesman off short is, I am sure, their fear that if they get into conversation with him they will buy because they lack the courage to refuse. When a business man is unable to keep his poise and is unable to decide for himself, with the facts before him, he is taking the wrong method by cutting the salesman off short. Cultivating self-control and refusing to let himself be "hypnotized" is the real answer, it strikes me.

The buyer who cannot sit down with a salesman, hear his story in detail, and then make up his mind whether or not he wants to buy, is indeed in a sorry plight, to my way of thinking. I keep in mind as an ideal at the opposite extreme a merchant friend of mine who habitually makes it clear to a salesman that he is invited to tell his story briefly and concisely and that after this the merchant will make his decision. This buyer gives careful attention, weighs the salesman's arguments intelligently and answers decisively—just as a buyer should, by my standards.

No fair-minded business man who is selling on the road expects every customer to buy on every call; but he does expect—rightly—that every customer will give a respectful and attentive hearing to his brief, to-the-point message. The salesman who is wordy and wasteful of time cannot, of course, expect courtesy equal to that accorded his more business-like competitor.

Don't let me give the impression that I accept as gospel truth and sound doctrine every statement that comes to me from a salesman who happens into the office. Nor do I want to leave the idea that I spend a great deal of time with all the salesmen when they call.

Many salesmen have cultivated an excellent insight into business conditions, which they can pass along to the customer who is willing to put a few minutes of his time against theirs. At the same time I see no use in spending a lot of time talking to the salesman who has nothing to say. The real thing to find out is which salesman actually has information and which one is merely trying to "jolly" me into a buying mood.

In the first place, I do not take too much stock in the talk of a new salesman who is making his first call. After a man has been on the job a while and shows that he knows his subject, it is time to take him seriously.

The Municipal Lumber Yard—What Next?

We have always with us theorists, visionaries, dreamers, agitators, fanatics and idealists. When things are not going exactly smooth in an industrial, commercial or business sense, they propound various solutions or hurl malicious charges at those in authority. A great deal of talk is heard about the alleged profiteer, the greedy monopolist and the avaricious middleman, and on the other hand as a panacea, there is presented industrial democracy, profit-sharing plans, bonus system and last, but not least, employee ownership, as far as it is possible to carry out the scheme. Then, we have heard of municipal coal yards, municipal abattoirs, and lately there has been proposed a municipal lumber yard. Some evidently imagine that any municipally managed enterprise is so satisfactory in achievements and so complete in its service and operation, that it is as near human perfection as any institution can be. The experience of most places, who have embarked in these civic enterprises, is that private ownership and competitive interests tend to create a better state of affairs all around than anything in the shape of a publicly-possessed undertaking.

Over in Sioux Falls, South Dakota, a lively war started between capital and labor, and after being carried through several stages, the climax was reached when the labor unions sought to beat the material man by getting the city to open a municipal lumber yard. They received a reply from the city attorney that under State constitution, no such a venture could be launched.

An interesting review shows how one little clash may lead up to a general, internecine struggle. A certain sash and door plant in Sioux Falls was operated as an open shop with the result that the labor unions started to boycott its products. The union men even went so far as to decline to perform work on any building in the construction of which material from that concern was to be used. Then the woodworking plants and lumber dealers inaugurated a counter-move and absolutely refused to provide material for any structure on which union labor was engaged. The unions endeavored to veto this by dragging the matter into court, but the State Attorney-General declared that the furnishers of material had equally as much right to decline to sell to employers of union labor as union labor had to refuse to handle the commodities produced in an open shop. Then the labor men and their supporters got busy and started out to put it over the material men. They believed that a city lumber

yard would solve the problem, but, on consulting the city's legal authorities, found that such a move was not a legitimate one, and there the matter stands at the present juncture. The upshot of the agitation was that the city attorney declared that the State constitution of South Dakota would have to be amended before the right to open a municipal lumber yard could be exercised by the State or delegated to any city.

"Own Your Own Home" Expositions

Plans are now actively under way for "Own Your Own Home" expositions at several eastern points which are expected to stimulate building this spring.

In Minneapolis this work is being carried out under the direction of the Builders' Exchange. Arrangements have already been made for holding a "show" in the armory early in February, at which building material, supplies, equipment and furnishings of all kinds will be exhibited. It is expected to be one of the largest exhibits of its kind ever held in the West, display space is now being located and arrangements for the exhibit perfected.

Chicago will also have a big "Own Your Own Home" exposition, it will be held in the Coliseum, March 26 to April 2. One of the ideas is to inaugurate a prize competition among architects for artistic and economical plans for small houses. The winners of these prizes will have their designs published in book form. In addition the winners will furnish plans and specifications at a nominal price so that prospective builders will be able to have the benefit of architecturally correct plans as well as ideas for economical building. It is proposed that there will be shown at the exhibit practically every commodity which is necessary in the construction of a home, and experts will be on hand to offer the results of their experience and knowledge tothe public.

Another exhibition of about the same character, only larger, will be held in New York City from April 16 to April 30. Last year a building exhibit was held in New York which attracted world-wide attention. Many of the successful exhibits at Chicago will be transferred bodily to the New York exposition.

Why Fall Buying is Good Buying

Information received in Toronto from the West is to the effect that a large percentage of the mills of British Columbia are contemplating shutting down for an indefinite period as they cannot afford to manufacture lumber at present costs and meet the present level of prices.

Wholesalers in the East are finding it difficult to secure quotations for anything in the way of special stock as the mills are not desirous of taking orders for stock which has to be specially manufactured. The volume of business being distributed among the mills is not sufficient to warrant a continuance of operation as the plants cannot afford to pile up lumber at the present outlay for production and keep running. Stocks of all kinds are reported to be low. The majority of the mills may have an accumulation of certain items, which can be shipped in straight cars, yet the same concerns would not be able to fill modern mixed car yard orders without manufacturing certain items. In the event of these mills closing down, therefore, it will be impossible for wholesalers or others to place orders for mixed car business until operation is resumed. On any appreciable increase being placed, such surplus stock as the mills may have would be rapidly absorbed, and a sufficient volume of business to warrant the mills resuming operation would undoubtedly force the prices of lumber above present levels and more then offset any decrease in freight rates that may or may not become effective at the end of 1920.

It would appear, therefore, say leading wholesalers, that retail dealers, who are in a position to take in and pay for stock during the next few weeks would be well advised to place their orders now. It is stated that the western market which has always shown a material weakness during the fall months has always firmed up either during December or January and that prices have been well maintained throughout the spring of the year following. For the last few years fall buying has been good buying and it is declared there is no reason to suppose that the present will prove any exception to the rule.

Editorial Short Lengths

A despatch from Brussels states that the supremacy of Canada and the Scandinavian countries in the pulp and paper industry, may be challenged soon by the Belgian Congo. The despatch fails to point out whether the challenge is in the matter of price or production.

Sugar obtained from sawdust is not the usual table sugar, according to the chemists of the New York State College of Forestry at Syracuse, but an entirely different substances, one of the many so-called "sugars" derived from different sources, and entirely different in chemical form. The public hope, therefore, that sawdust may be used to relieve the present famine in cane sugar is not likely to be realized for a long time, if ever, according to these authorities.

Ill-luck never comes single-handed. Just as the price of coal and wood soars to hitherto unheard-of values, it is announced that the federal government at Ottawa has decided to effect an economy in the matter of its official publications and that only a few hundred will be printed instead of thousands. This is really a misfortune in business and office quarters because so many of these volumes were received that they served admirably for fuel to moderate the temperature these chilly mornings. Thus is the high cost of living increasing with the former generous supply of government blue books shut off.

Mr. August Ramoneda has recently been in Canada, on behalf of the Spanish paper mills, to arrange for the purchase of pulp, and also for the sale of paper. Mr. Ramoneda was instructed to purchase as much Canadian pulp as was possible, but on account of the scarcity he only secured a small portion of what is required. The experiment of collective buying, which has just been brought to a successful conclusion by Mr. Ramoneda, is a new one, but as these Spanish mills, to the number of twenty-five, make all kinds of paper and consume about 65,000 tons of various kinds of pulp per annum, it should prove a valuable market for Canadian producers.

Speaking before the Empire Club in Toronto recently, Dr. E. T. Powell, editor of the London, Eng., "Financial News," in the course of an address that was to say the least unusual and probably unique in the experience of the audience, visualized the prospects of the United States making an effort to come back under the British flag within the life-time of the present generation. He admitted that when the prophecy was made some time ago, it struck him as the vision of an old man, but he had come to see that such a union was not unlikely. "Now I would not," he continued, "say this as a scientist and psychologist if I did not know that as you Canadians continue in the wonderful work of empire building, your southern neighbors will ask themselves 'what is it that they have got that we have not?' They will answer themselves, 'Where there is no vision, the people perish.' "

An effort to re-establish the beaver on the streams and meadows of the White Mountains country, in New Hampshire, from which it long since disappeared, is being made by the Society for the Protection of New Hampshire Forests. The Lost River Reservation is again the haunt of the dam-building animals, four beavers having been liberated there as the first step in an effort to return the amphibian architect to its former usefulness. Within the steep walls of the Kinsman Notch, through which tumbles Beaver Brook, the beaver will have its favorite topography in which to progoate and work under the foothills of Moosilauke Mountain.

The animals set free were the gift of the state forester of Minnesota, who selected them from a breeding colony at a state pack situated at the headwaters of the Mississippi. The beaver are descendants of a family introduced to Minnesota from Canada.

Why Hardwood Lumber is Costly to Produce

Representative Ontario Lumberman Points Out What the Operators are up Against Today in the Way of Decreasing Supply and Augmented Demand

A. E. Clark, Toronto.

The growing scarcity, high cost of production and heavy demands made by various industries upon hardwood lumber were ably outlined before the Rotary Club of Toronto, in a recent address by A. E. Clark, of Edward Clark & Sons, Limited, former chairman of the Wholesale Lumber Dealers' Association, of Toronto, and a member of the Board of Directors of the Canadian Lumbermen's Association.

Mr. Clark has the facility for presenting his subject in a interesting and instructive way and of late months he has been called upon to speak before various gatherings. Mr. Clark, who is an enthusiastic Rotarian, was given a cordial reception, and in opening humorously remarked: "The press of Ontario has had a great deal to say in the timber investigation regarding lumbermen, but let me tell you at the outset that these men are not hardwood lumbermen. They are softwood men, and we have attained no such fame and notoriety as they have." (Laughter.)

Continuing, he said that hardwood lumber is the product of deciduous trees, or those which lose their leaves every year, as contrasted with woods of the evergreen variety, or coniferous growths, commonly known as softwoods. In Canada, the principal hardwood productions are birch, maple, ash, elm and basswood. These are found in Ontario, Quebec, Nova Scotia and New Brunswick, and the rest of Canada grows softwoods. Oak, chestnut, gum, cypress, hickory and other hardwoods come principally from the United States, and mahogany from Mexico, the East and West Indies, Africa and other tropical countries. The United States in 1918 produced between six and seven billion feet of hardwood, and recent returns from Canada showed that in the year 1918 the total cut of hardwoods was 201,667,000 feet. Of this the greatest cut was birch, which, according to a compilation by the Department of Statistics, Forestry Branch, Ottawa, constituted 76,165,000 feet B.M. Maple came next with 47,884,000 feet, then followed basswood with 23,965,000 feet, elm, with 19,016,000 feet, poplar, 13,945,000 feet, beech, 8,321,000 feet, ash, 7,827,000 feet and other varieties much smaller.

The total cut of lumber in Canada—hardwoods and softwoods—in 1918 was 3,886,631,000 feet, of which the hardwoods formed, as already stated, 201,667,000 feet, the remainder, 3,684,965,000 feet being softwoods. It will thus be seen that the hardwood harvest in Canada is comparatively small, and more particularly so when compared with the six or seven billion feet cut in the United States.

Becoming More Difficult of Access.

Hardwood lumbering is a distinct branch of the lumber industry, both in method and in production. The hardwood stands of timber in Canada are being rapidly depleted and the source of supply constantly receding or becoming more and more distant from the market. The severe climatic conditions of the northern territory are not as conducive to as tall growth or thick stands as prevail in the south. The average production of hardwoods to the acre in the Dominion is between 4,000 feet and 5,000 feet or only about 25 per cent. of the yield in the south.

The rough nature of the country in addition makes lumbering operations difficult and expensive, and reduces the production, as modern available means such as logging, railways, etc., which are employed in many states of the Union are not economically feasible in Canada. The transporation problem necessitates that the mill must not be more than four or five miles from the cutting. Hardwood logs will not float for any length of time. The lumber has to be trucked or sledded, and we are now past the trucking period this season, and must use the sleds in a very short time. Hardwood trees must be felled in the Fall but not before September 1st, as if cut before this date the wood has a tendency to sour or spoil. The operator has from September 1st to the time when deep snow arrives to skid the logs, build the roads and bring them out to the main bush roads, then awaiting good snow roads to transport them to the mill or railway.

The lumberman to-day was up against high wages and lack of efficiency on the part of men, which increased manufacturing costs. The result had been that hardwood lumber had materially advanced in price during recent years, "but not as much," added Mr. Clark, "as the producers would like to see. All lumbermen are not millionaires, only the softwood men come in that class." (Laughter.) Recently an easterner made an inquiry regarding the price of a portable sawmill and was told that the figure was $1,500 f.o.b. Brantford. His observation was characteristic. "What in h—— would I be in the lumber business for if I had that amount?" he retorted.

The introduction of many new uses for hardwood lumber since the commencement of the war had resulted in the supply not satisfying the demand. Birch had been used extensively in rifle butts, while for propeller blades the woods used were birch, mahogany and walnut. The rims of trucks, framework, etc., were also built from these woods, while the rougher ends were employed in box-making for shells, cores, etc.

Heavy Requisition for Hardwoods.

Up to the present, the demand for hardwood lumber had been keen, but Mr. Clark naively added that "the hardwood men could take care of a little more business than was offering to-day." The automobile had revolutionized the hardwood lumber industry, and it was estimated that the annual consumption of hardwoods for the bodies and wheels of autos and motor trucks took about one-third the total production or two billion feet annually. Hardwood flooring and trim also required large quantities, and one of the first questions asked when purchasing a house is, "Has it hardwood floors and interior trim?" Gramophones also consumed huge supplies of hardwood, while far as transportation is concerned a traveller could sleep comfortably in a hardwood car in the winter time owing to the ability of the company to heat the coach properly which it was impossible to do with the steel car. In the summer time the hardwood coach was cool while one of steel construction seemed to generate heat.

"Why," concluded Mr. Clark. "Even the United Farmers of Ontario have to depend on the hardwood lumberman who steps in and furnishes the supplies of wood to manufacture the implements which cut the crop and thresh the grain."

The hardwood lumberman has his special place in the world and in future when buying furniture the speaker expressed the hope that his hearers would endeavor to purchase some pieces, at least, for their homes which were made of the product of the Canadian forests.

Not Enough Labor to Handle Lumber

The Official Bulletin of the National Hardwood Lumber Association in a recent issue says: "The demand on our Inspection Bureau has been unusually heavy during recent months as indicated by the reports of the total volume of work done each successive month and published in the concurrent numbers of the Official Bulletin, and there has been some delay which could not be avoided. Much of this delay is attributable to lack of co-operation on the part of buyers in furnishing necessary labor to handle lumber for the National Inspectors, and as this shortcoming extends in many sections to our members, it is urged that all members co-operate as far as possible with us in this direction and furnish labor to assist inspectors without unavoidable delay. Otherwise additional expense must be charged to the account of the member ordering the inspection."

The lumbering industry in Newfoundland will be carried on on a larger scale in that colony this year than ever before. Besides the large number of men which are being offered employment by the Grand Falls company and other large concerns lumber tracts are being opened in the vicinity of Grand Lake this fall. One hundred men are now employed and a new company lately organized is giving employment to about 400 additional men.

Record of Wooden Shingles as Roof Covering

Numerous Attempts Have Been Made to Eliminate Them but Investigations Show Good Shingles are not Fire Menace—They Have Stood the Test

By Frank L. Nash, Secretary of Shingle Agency of British Columbia.

Frank L. Nash, Vancouver, B. C.

At a recent meeting of the Ontario Fire Prevention League held in Toronto the first week in October, J. B. Laidlaw, manager of the Norwich Union Fire Insurance Society, addressed the league on the subject, "The Fire Menace of Wooden Shingles." At the conclusion of his remarks, he offered the following resolution:

"That the Ontario Fire Prevention League request the Legislature of Ontario to pass an act, to be of general applicatioon in every part of the Province, and with no exceptions, to prohibit the use of wooden shingles or other combustible material as a roof-covering on any building hereafter erected nearer than fifty feet to an existing structure, and to prohibit the extensive repair of any existing roof covering composed of wooden shingles."

This is just another instance of the many attempts by certain interests to eliminate the wooden shingle as a roof covering. In spite of this fact, the number of cities having anti-shingle ordinances throughout the United States and Canada remains about the same (as stated in Mr. Laidlaw's address as being 91, which is approximately correct), for as often as one city decides to experiment with an anti-shingle ordinance some other city will repeal one, which had formerly been passed, but that had not produced the desired results, that of reducing the fire losses.

Use Vertical Grain Shingles.

There are many cities that have passed anti-shingle ordinances only to repeal them at a later date. There is another class of cities that have investigated the question, and have passed common sense building codes, in which they permit of the use of vertical grain, or quarter sawed shingles, in which the shingles must be 5/2 inch in thickness at the butts. These shingles will lay flat on the roof, and will not curl up at the edges allowing places where inflammable material may accumulate. The fact is that such shingles are the only shingles that should be used for roofing, as they give better satisfaction and last longer.

The public is often willing to take for granted reports made as to the origin of fires without giving careful thought as to whether or not the case had been carefully diagnosed and the real cause found. This condition has been known to exist, and in many cases the shingle has been blamed in reports of fire causes as "Sparks on Shingle Roof" when the cause should have been reported as "Defective Flue," or as "Sparks from Chimney," which was due to the burning of soot in unclean chimneys.

Examination of the report of the State Fire Insurance Commissioner of Texas, dated February 14th, 1917, indicates that had the chimneys been properly constructed and cleaned, and buildings properly fire-stopped, the 1,568 "Unpreventable Fires" attributed to sparks on roofs would have been reduced to a minimum.

The National Board of Fire Underwriters, in their statement of fire losses in the United States for 1917, place the total at $231,628,040, and in 1918, $283,103,101, or a total loss in two years of $514,785,141, with a total of fires caused by sparks on roofs of only $13,682,423 for the two years, or a percentage of 2.66 per cent. which could not at least all be attributed to wooden shingles.

How Some Fires Are Originated.

Some of the worst conflagrations and heaviest losses have been in the fire-proof districts, as the National Fire Protective Association says in one of its publications, "It is the frequent conflagration in a business district where the commercial values are greater which make the fire tax in the United States so enormous," and in these congested districts wooden shingles are seldom found, and never recommended for such use. Take the much-talked of Atlanta, Ga., conflagration. This fire started in the business district, burned out to the residence district, and was stopped in a shingle roofed frame constructed house.

When an overwhelming majority of all large cities in the United States and Canada permit the use of wooden shingles within their corporate limits, outside of the congested districts, it is proof that the advantages of the wooden shingle roof in residence districts are still recognized. It is also proof that the general public desire an opportunity to make their own choice of the roofing material they shall use, for there are many well-advertised forms of roofing, claimed to be "fire-proof" or "fire-resistant." To the public these words are generally synonymous—that are very combustible.

A few years ago, an anti-shingle bill was introduced in the legislature of Texas, prohibiting the use of wooden shingles within the State. This bill was killed in committee simply in response to prompt public remonstrance. At the public hearing of the committee, the efforts to defend the bill were very feeble, and no minority report was made, which would seem to indicate lack of proof that wooden shingles are readily objectionable.

It is obvious from the above facts, and statistics show, notwithstanding statements to the contrary, that wooden shingles have contributed but a very small amount toward the spread of fire over large areas or that a roof of good shingles is a fire menace.

Too Many Cancellations by Dealers

"When business is dull or quiet there are always more or less complaints and cancellations of orders on the part of the retail lumbermen," remarked a Toronto wholesaler this week. "'I have heard of a number of cars being refused, particularly on western stock, which a few weeks ago would gladly have been accepted. Now some kicks are being raised on all sorts of things, such as not up to grade, wet stock, etc. I could not begin to tell you of all the excuses put forth for trying to reject car lots. Three months ago we never had a complaint to adjust and just why this condition of affairs has arisen it is difficult to explain in a satisfactory manner. The mills are not to blame. Insurance men will tell you that there are always more fires in nearly every community in times of depression than there are when business is humming and everything is brisk. Not that there is necessarily more incendiarism or deception but there is not the same protection and constant care exercised. Safety work is allowed to go lax and thus from spontaneous combustion, friction and other causes, fires break out.

Beavers Not Preparing for Hard Winter

With anthracite coal ranging from $20 a ton upwards, and scarce even at that price, it is cheering news the Indian prognosticators of the weather bring to the people of this North country, says a recent dispatch from Cobalt, Ont. The Indians say there will be an open winter. They base their predictions on the apparent indifference of the beaver to the coming cold blasts. This industrious animal, the Indians say, has not yet begun to build his winter quarters, contrary to his usual plans. Two years ago, when the winter weather in Northern Ontario was exceptionally mild, the beaver showed similar dilatoriness in the early part of the season.

However the trappers are taking the joy out of the pleasant anticipations of the Indians by declaring that coming winter will see heavy snowfalls. The trappers' guide to the weather conditions is the lively hornet. Many hornets' nests are in evidence, they say, and they regard this as a sign that there will be considerable snow.

It is stated that 850,000 feet is the present daily curtailment of the output of the mills on the mainland and Vancouver Island. It is also reported that at a meeting of the association recently a circular was issued requesting the mills in British Columbia to shut down for thirty days between now and January 1st, 1920. Matters are now declared to be in the worst position, so far as the lumber industry is concerned, that they have been for many years. Few orders are coming in and these, together with extremely high costs, make the mills more desirous of closing down rather than going ahead and piling up lumber under these conditions.

Want Definite Understanding on Car Weights

Wholesale Lumbermen Discuss Question and May Press Matter in Courts to Establish the Validity of Their Contentions and Protect Shippers

The Wholesale Lumber Dealers' Association resumed their monthly meetings on Friday, Oct. 15th, when a dinner was held at the Albany Club, Toronto, at which there was a large attendance, Mr. A. C. Manbert occupied the chair. In opening the meeting he referred to the pleasure which the executive of the association experienced in seeing so many members turn out for the first meeting of the season. He hoped that the coming season's work would be as satisfactory as the past season's, and thought that all members of the association would agree that they had made good progress, that their deliberations from time to time had been worth while and the time they had spent at the meetings of the association had been well spent. With the changed situation which had developed in the lumber business, he felt sure that they would find abundant reason for coming together and discussing their problems.

Mr. A. E. Eckardt, chairman of the Transportation Committee, made a report of the work of the committee in connection with the application to the Board of Railway Commissioners for Canada against many of the features of the new railway freight tariff contained in C.F.A. No.. 14, particularly those relating to the weighing of cars. The Board had given them a hearing on their application. Proceedings had not gone very far before the chairman recognized that the matters complained about were of tremendous importance and that he preferred the hearing to take place before a full meeting of the Board.

The Chairman of the Board then adjourned the case and recommended that the Railway Companies and the lumbermen should get together for a conference.. A conference had been held, and Mr.. Eckardt had not been present at it he asked Mr. A. E. Clark for a report of its proceedings.

The Minimum Car Weight Question.

Mr. Clark stated the chief matter laid before the conference by the lumbermen had been their claim that the railway companies should accept payment upon the minimum weight of a car when it had passed a scaling point and had not been weighed.. The representatives of the Railways had replied that according to the Railway Act this would be illegal as they were not permitted to haul anything for which they were not paid. Mr. G. C. Ransome, Chairman of the Canadian Freight Association, had said that the railway companies would like the lumber shippers to report to the freight traffic managers all cases in which cars had not been weighed, as they were endeavoring to check up this matter and give the shippers better service.. This, Mr. Clark said, was not getting very far as they did not place much faith in the promises of the Railway Companies in such matters. .

Then the conference had taken up the matter of estimated weights for lumber. In connection with hardwoods, the railway representatives present had agreed to accept several reductions in weight which were suggested by Mr. Clark. In spite of this, a few days ago, Mr. Clark had presented a claim based on one of these changes and had received a reply that C.F.A. No. 14 contained the weights that would apply and his claim was refused. He was not through with the matter, however, and would press it further.

Mr. Clark then read a letter written by Mr. Ransome to the secretary of the Wholesale Lumber Dealers Association, in which Mr. Ransome stated that the railway companies had given consideration to the estimated weights on white pine, red pine, hemlock, tamarac, spruce and slabs and had come to the conclusion that the weights provided in C.F.A. No. 14 were reasonable and should not be changed. Mr.. Ransome stated further in his letter that if the members of the association thought the weights were too high the railway companies would agree to joining with the lumbermen in making tests at any convenient point.

Mr. Clark concluded by stating that the members of the Transportation Committee considered that up to date the results of the hearing and the conference had been anything but satisfactory, and it had been thought advisable to lay the whole matter before the association again for discussion.

Shipper Has to Bear all the Onus.

Mr. A. C. Manbert amplified some of the remarks of Mr. Clark and Mr. Eckardt. He stated that it had seemed to the committee that the onus of the whole matter was placed to-day upon the shipper and that the railway companies were bearing no part of it. If bills were incorrectly made out, the shippers had to pay them and make claim for a refund, but if errors were made in overcharges it was very seldom, if ever, that the matter was brought to their attention by the railway companies. A number of things operated to their disadvantage particularly, because of the fact that they sold material at delivered prices. The customer generally paid the freight and was quite unmindful of the desirability of a close scrutiny of the bill. In many cases, the customer was unfamiliar with what the rate or the general conditions should be. Bills requiring correction were coming back to the wholesalers from time to time and at a considerable lapse of time from the date of their payment. It has occurred to them that the railways should bear a portion of this responsibility and should be penalized when they were at fault thus giving them a distinct interest in having their bills correctly made out. Therefore they had proposed that where a car passed a scaling point, and was not weighed, the railway companies accept payment of the minimum for the car.

Want Actual—Not Estimated Weights.

The representatives of the railway companies, at the conference, had taken the position that they were operating under orders of the Board of Railway Commissioners, and that C.F.A. No. 14 was all a matter of orders of the Board. They said that they could not and would not consider any of the suggestions which the lumbermen had made. They would be glad to meet with the representatives of the lumbermen and to receive any suggestions the lumbermen had to make. If the lumbermen reported any glaring errors they would be glad to do what they could to improve the personnel of their service, but beyond that they would do nothing.

The only point brought up which they had been prepared to consider was that of estimated weights and their conclusions on this point had now been laid before the association in Mr. Ransome's letter. They were prepared to meet the lumbermen at any point, they said, so as to make tests of weights. This was an almost impossible proposition and unfair to both sides. The only way to arrive at fair estimated weights would be by some method of experience and records which would show what are the facts. It would also be very unfair at this partincular time of year, when dry lumber was practically non-existent, to attempt, even on the basis of experience of the past six months, to arrive at a decision as to what dry lumber presumably should weigh. They had also pointed out to the railway representatives that lumber to-day was manufactured thinner than it used to be and that it was edged more closely, which made a considerable difference in the weights. In short, they had told the railways that they wanted actual weights. not estimated weights, and if they had to use estimated weights they wanted them low enough so that the shippers should not be unfairly penalized.

Mr.. W. J. Lovering, Mr. G. H. Long, Mr. J. L. Campbell and several other members took part in the discussion which followed and all expressed a belief that the association should proceed with the matter to the end.

Make a Test Case in the Courts.

Mr. A. E. Eckardt said that he believed they could easily upset the claim of the railway companies that it would be illegal for them to accept payment on the minimum weight. If they were going into the matter of revising the estimated weights, his company could furnish records on a hundred cars of dry white pine and a hundred cars of dry hemlock shipped before the war, and he thought other companies could do the same in connection with other kinds of lumber. He suggested that the association put a test case in the courts for decision.

At the conclusion of the discussion, it was moved by Mr. W. J. Lovering, seconded by Mr. J. McBean, and carried that this matter should be proceeded with by the Transporation Committee to a conclusion.

Mr. A. E. Eckardt, in order to illustrate the advisability of carrying such matters to a finish,reported that he had recently complained to Sir Geo. E. Foster that Ontario exporters of lumber were discriminated against by the steamship companies who would only quote them space on the basis of the hundred pounds, whereas Que-

bec exporters were given a rate based upon the standard which worked out much cheaper. Sir George Foster had laid the matter before the steamship companies, and for a time it had looked as though nothing could be done.. Persistence prevailed, however. and he had recently received advices from all the steamship companies that the Ontario and Quebec exporters would be treated alike in the future.

Other matters of importance were discussed, including the telephone companys' application for increased rates, and the increased freight rates. It was moved by Mr.. Lovering, seconded by Mr. Cates, and carried that the transporation committee should consider the matter of the increased freight rates and be prepared to bring forward a plan at the next meeting of the association for dealing with the matter in co-operation with other associations.

The meeting then adjourned.

Kipawa Plant Has Abundant Wood

The output of the Kipawa plant of the Riordon Co., which is located at Temiskaming, Ont., will be increased within the next few days by fifty tons a day, making production two hundred tons. It is expected that within the next year the tonnage will be augmented to 300 daily. This increased production will make a total for the far northern mill of over 90,000 tons a year, and bring the total output of the three mills of the company up from 100,000 tons a year to 190,000.

The digesters will be increased from five to fifteen at the Kipawa plant, and the boiler capacity will be doubled. For the time being the company will be able to get along with its present amount of power, 7,000 h,p., if the bleaching plant is given up temporarily, as the electrolytic process used consumes enormous quantities of electric power. It will not be long, however, before the generation of power at the Kipawa mill will run to 15,000 h.p., out of a capacity of developed and undeveloped 30,000 to 40,000 h.p.

So far the Riordon Company has not been called on to utilize the new Edwards and Gilmour and Hughson limits for any of their mills. The limits at Kipawa, some 2,000 square miles, north of Lake Temiskaming, that are owned outright by the company, and some 20.000 square miles back of the mill property, as yet hardly touched, but on which cutting rights could be secured, will be ample for the Kipawa mill.

Newsy Jottings From the Busy East

Word was received recently by the Provincial forester of the death by drowning of F. C. Kenny of Glassville, N. B. He was employed with a party engaged in timber cruising on the headwaters of the Miramichi.

The Pejepscot Paper Company, which owns timber limits in St John County, and mills at Great Salmon river, has ordered constructed two barges which will have keels ninety-eight feet in length, and carrying a capacity of two hundred cords of pulp wood.. The barges will be used in towing the pulp wood from Great Salmon river. They are to be built at Stockson, Me.

Word has been received in St. John of the death of Allston Cushing in Boston, Mass. He was at one time well known in lumber circles in New Brunswick and was a son of the late Andrew Cushing. When a young man he went to Salisbury, N. B., where he engaged in the lumber industry. Later he came to St. John and on the death of his father operated their mill at Union Point. His wife, who pre-deceased him, was a daughter of the late E. G. Dunn, also at one time prominent in the lumber business here.

The water in the St. John river has been exceptionally high this month and as a result all kinds of trouble has been experienced at the booms. The St. John River Log Driving Company had to extend additional booms to their rafting ground at Douglas, N. B. In other sections strenuous efforts were made to cope with conditions. At the Fredericton booms some joints of the Nashwaak Pulp & Paper Company's logs were carried away, over 250,000 feet of logs owned by Stanley Scott, from Gordon C. Scott's new mill, and between 390 and 400,000 feet of logs from Stanley Douglas' mill at South Devon.

Pulpwood is to be carried from the port of St. John to ports along the United States coast by large steamers in future according to a recent announcement. The Canadian Government steamer Merchant Marine is enroute to this port to load pulpwood for Portland, Me. This makes a new departure in regard to pulp exports from here. This is said to be a result of the increased railway freight rates. The shipping of pulp wood to the United States by water has been going on considerably of late from ports along the north shore of the province. This will cease when ice forms, so that it is not unlikely that a large amount will be diverted to St. John for shipment.

One of the biggest lumber deals put through in the Maritime Provinces in late years was recently consumated when the St. George Pulp & Paper Company's property in St. George and along the Magaguadavic river and tributaries was purchased by the Press Publishing Company of New York City. The purchase price of the entire proporety including mills, is understood to be in excess of $1,000,000. The transfer includes 105,000 acres of wood lands. It was ratified legally in New Brunswick at a special meeting of stockholders, which was held in St. John recently. The Press Publishing Company bought the South Norfolk property some time ago. The purchase of this vast property is expected to mean a renewal of activity at St. George, and it is said that additions will be made to the plant.

British Capitalists Buy Chew Holdings

G. Mason & Co., Limited, manufacturers, buyers and exporters of white pine and maple, of Manchester, England, and Midland, Ontario, have purchased the sawmills and lumbering interests of Manley Chew, situated at Midland and at Thunder Bay. The limits are on Beckwith and Hope Islands and also cover five townships north of Massey Bay. The purchasers have assumed control of the logging interests but Mr. Chew will finish his present contracts at the Midland mill.

Major G. L. Main, late of Galt, Ont., will have charge of the entire operations for G. Mason & Co., who last spring purchased several million feet of white pine from Manley Chew, who is one of the biggest individual operators in Canada. The mill, which has just changed hands, is one of the fastest and best-equipped in the Dominion. In dimensions, it is 65 x 125 feet wth cement boiler house 44 x 46 feet.

Manley Chew, Midland, Ont.

The sawing equipment consists of two double-cutting band saws, two gang edgers, lath and picket machines and all the other accessories of an up-to-date mill. The capacity of the plant is one quarter of a million feet every twenty-four hours, or, more properly speaking, every day, with two shifts of ten hours each. The lumber cut is principally white pine, there being a small percentage of hardwoods. The yard capacity is exceptionally large and there is piling ground for 20,000,000 feet of lumber, with 5,000 feet of track. The dock for water shipment will hold about 5,000,000 feet of lumber and 3,000,000 pieces of lath, and has a depth of 14 feet to 30 feet.

The mill at Midland was built in 1899 by George Chew & Sons, the company being composed of the late George Chew and his sons, A. G. Chew and Manley Chew. The latter has been the sole owner and manager for eighteen years, and is widely known, not only in lumber circles, but also in the political arena, having sat for some years as the Liberal member for Simcoe in the Federal House.

It is understood that Mr. Chew retains his interest in Chew Bros., which firm formerly consisted of George Chew (father of Manley Chew) and his brother, Thomas Chew. They dissolved partnership some years ago and the firm is now composed of Ed. Letherby and Manley Chew. Mr. Letherby has been with the concern since 1885 and is now the manager of Chew Bros.

It is currently reported that the amount of money involved in the purchase of Manley Chew's mills and extensive limits is in the vicinity of $2,000,000.

How Lumber Cut is Shaping for Coming Year

While Production is Being Curtailed in Some Districts Reports from Others Show That Wood Operations are Proceeding on Fairly Large Scale

In times when trade is quiet and the outlook uncertain, various rumors are set afloat. Although these are frequently of a misleading and exaggerated character, they are given credence; in fact, as they circulate they are often made to fit in with the particular view, outlook or disposition of the one who gives utterance to them.

There have been numerous reports, both in the press and by word of mouth, that the cut of lumber owing to the rather precarious demand would be greatly diminished this season, that some logging companies would not put men in the woods and that the lumber business was rapidly on the road to extinction. Listening to some of these rumors one would think that woods' operation, driving, towing, hauling and sorting logs, would soon become a lost art and that in the lumber districts which have hitherto teemed with activity, there would be only the evidence of idle plants or bygone operations.

In an endeavor to present the true state of affairs in eastern Canada and to show to what extent these reports have been colored, the "Canada Lumberman" has secured first-hand information from representative companies in many sections. These show that while the cut will be less in some districts, especially in the east, yet on the whole, production in Ontario during the coming winter will be pretty well up to the past season. It is a little early yet for some firms to speak authoritatively.

The general opinion is that there will be no immediate reduction in the cost of operation; in fact, in some instances it will be higher. The lumber business is not in the unstable condition that certain interests represent it to be. On the whole the outlook is not forbidding and there is a firm conviction in the ranks by those, who have given the future situation the closest study and the most earnest thought, that a good demand for lumber will set in at the beginning of 1921 and industrial activity will once more manifest itself; that housing campaigns and construction undertakings will proceed on a larger scale than ever, that prices will be more stabilized and things generally on a more even keel than they have been since the war.

With respect to the labor situation, general cost of supplies, number of camps in operation and stock of lumber on hand, etc., the following opinions from progressive firms will afford the reader some definite knowledge on these points and will be followed with interest.

Labor Shortage in Ottawa District.

James Davidson's Sons, Ottawa, Ont.—In reference to the lumber situation in general at the present time we are conducting—the same as last year—two camps on our limits with 100 men in each camp. We might add in this respect that we are having great difficulty in securing help for the woods, as there seems to be a shortage of bushmen in Ottawa at the present time. We have more help than we require in our factory here, and outside of our door department, the factory is quiet,—even more quiet than it was this time last year. In regard to the stock we have on hand at our sawmill at Davidson, Que., we have only about 60% of what we had a year ago. The wages that we paid in the bush last year were from $55.00 to $65.00 per month, and this year we are paying from $65.00 to $85.00,—making an increase of an average of $20.00 per month. The supplies that we require for the bush are also up in price, although we expect this matter will right itself shortly. Taking everything into consideration, we feel that we are going to have a very quiet winter both in the lumber end of our business and in the manufacturing end. Nevertheless, we are going ahead with our woods operations and expect to cut as much lumber as we did a year ago—which was in the neighborhood of 8,000,000 feet.

Receiving Many Inquiries for Lumber.

The Mageau Lumber Co., Field, Ont.—We find men a great deal less efficient and more restless than last year with an increase of wages varying from five to ten dollars per month. The cost of provisions in general is somewhat higher and we believe that it will cost about five dollars per thousand feet more to get logs out this year than last. As far as we are concerned, on account of the lack of water we were unable to get all our logs out this year, leaving 60,000 in the water at the head of our creek. This reduced our output to two million feet B. M. instead of six million and a half, and consequently our operations this winter will have to be curtailed. We will not cut more than fifty thousand logs. Even at that we are finding much difficulty in getting the men to do that much, as we have had a camp opened since early September and have only twenty men in it. As far as the demand is concerned, we have had more enquiries in the last six months than ever before. This may not be due to there being a greater demand for lumber, but might be due to the fact that our name is becoming better known to the buying public.

Wages High and More "Jumpers."

The Pembroke Lumber Co., Pembroke, Ont.—We are only operating five camps this year as compared with six last season. The crews at the present time are about two-thirds of the required number, and they are filling up very slowly. Labor is scarce and the grade is very poor. In fact, we have never experienced a year similar to this one as regards jumpers. Wages are from $10.00 to $15.00 a month higher, and camp supplies are still advancing over last year's prices, with the probable exception of oats. Our stock of lumber on hand at present is very small, and will no doubt be entirely used up before the end of the present year.

Will Not Operate Heavily.

W. J. Bell, of Sudbury, Ont., general manager of the Spanish River Lumber Co., says.—We are not operating heavily this season, having only five camps. We are also cutting down the number of men to a camp. The labor market seems to be a little easier the past few days, but so far, the efficiency is just as low as it has been. Wages are about $20.00 higher than last year, running from $75 to $85 per month, and board. Supplies put in the woods last winter for this year's operation, were bought at pretty nearly the peak. Just at present most lines can be bought considerably cheaper. Our stock of lumber is practically disposed of, and we have on dock and in the yards at our mills about 60% of what we had this time last year. Our customers have moved the lumber this year as soon as it was in condition to ship.

Big Reduction in Huntsville District.

The Bethune Pulp and Lumber Co., Huntsville, Ont.—Reports are well founded that there will be a big reduction in the cut of logs taken out this coming winter. In our own case operations and those of our neighborhood will be curtailed considerably. With the uncertain demand and operating costs higher than ever before in the history of the lumber trade, it would, indeed, take a very optimistic turn of mind to go ahead and try and increase production in view of present and possible future conditions. Wages are 20% higher and no more efficient. The only supplies that are at all cheaper are oats and potatoes. We have about 50% of our 1920 cut unsold, and some sold that is unshipped, but this is mostly of late sawing. Softwoods have been affected by the cheap southern pine being dumped into Canada at very much lower prices than are obtained in the U. S. markets. We cannot meet this competition at the present high producing costs, and rather than go ahead under the present conditions we have decided to let our timber grow until times are more normal.

North Shore Cut Will Be Less.

The C. Beck Mfg. Co., Penetanguishene, Ont.—The coming lumbe cut on the North Shore is much less this year than last. There is a great scarcity of labor, and all the different firms we know of, are reducing their number of camps considerably. Our reduction is 25% in the number of camps, and up to date, we have not been one-half filled up, and as to what the outcome will be in cut, we do not know what to say at the present time. It may be depreciated 50% on account of not getting the required number of men in each camp. The cost of feeding our men is a little higher, and the feed of teams is about the same. A considerable proportion of our stuff had to be put in last winter, and it possibly will be just as high again. We understand that a great many others are finding the same conditions ruling in their operations.

Believe Prices Are Bound to Advance.

The Colonial Lumber Co., Pembroke, Ont.—We are operating the same number of camps as last season, but the labor supply, although very short a year ago, is worse this year, with the result that the log output in the Ottawa valley will probably be very much less than last year. Wages for bushmen are higher than a year ago, and in many cases supplies are selling at higher prices. All our lumber in

Scene at the foot of the "pot hole grade" in logging operations of the Eastern Lands Department, Canadian National Railways in Northern Ontario

this season's cut has been sold, and is moving out freely. A considerable quantity has been shipped green from the saw. The quantity of lumber stored in manufacturers' yards is, we believe, very much less than last year, and owing to the rates of wages being paid, cost of supplies, etc., we cannot but feel that prices for lumber such as we manufacture, namely, white and red pine, are bound to advance.

General Costs Will Be Higher.

The Fraser Companies, Edmundston, N.B.—We do not propose cutting as many logs this year as last year. We have hardly any men in the woods yet and cannot tell how plentiful help will be. We think that the wages and general cost of supply will be higher than last year.

Their Cut Will Be Normal.

The Keewatin Lumber Co., Keewatin, Ont.—We expect to put in about the same quantity of logs as we did last year. Labor is a little more plentiful than it was last year, but wages are about 10% higher. The cost of supplies will be from 10 to 15% higher on an average. We expect that the efficiency of our labor will be better than last year, although we cannot tell as yet. We have about the same amount of sawed lumber on hand as we did at this time last year.

Will Get Out Same Quantity.

The Belgo-Canadian Pulp and Paper Co., Shawinigan Falls, Que.—We will have this winter about the same quantity of camps as last year and also about the same number of men. The wages of the lumbermen are from 10 to 15% higher than last year and the efficiency is not as good as some years ago. We may add that the men do only two-thirds of the work they did before the war. The prices for supplies are about the same as last winter.

The Fletcher Corporation, Sherbrooke, Que.—For the past couple of seasons we have not been operating in Canada and are not this year; therefore, we are not in a position to give you any information that would be of much service. We might say, however, that in our operations in Maine there seems to be a fair supply of labor with wages about the same as last year, and we are getting out our estimated and planned for cut.

Labor is Still High in Price.

The Louise Lumber Co., Quebec.—We are cutting only about 40% of what we did last year and what camps we are operating are with small crews. Labor is high priced and unreliable. Wages are higher than last year in some districts; in fact, jobbers are asking $2.00 to $3.00 more per M. feet than last year. The scarcity of help we attribute to the large quantities of pulp wood being cut and the high prices being paid for doing this work. Provisions on the whole will cost about the same as last year. Our stock of lumber on hand unsold at the present time is only about 50% of what it was a year ago.

The New Ontario Colonization Co. of Buffalo, N.Y., and Jacksonboro, Ont.—It is our intention to log throughout the fall and winter in our small way, and it will be our policy to purchase what logs are offered us, providing we can afford to pay the price. Labor with us is very scarce, high-priced, and inefficient. We had hoped that labor conditions would ease off some, but not as yet, nor can we see any real improvement in the near future. We are running two camps and are ready to take on bushmen at both. Our mills are running and labor conditions at the mills are more favorable than in the woods. We will put out this year about the same amount of lumber and rossed pulpwood that we did last year, and we have about the same amount of stock on hand in pile that we had a year ago. We are having fair demand for our products and are moving them out about as fast as we can secure cars and the labor to load. The outlook for the future to our way of thinking might be far worse than it is.

Will Cut Four Million Less.

The Fassett Lumber Co., Fassett, Que.—We have now as many camps as we had last season, but we will not cut as many logs. The amount will be about four million feet less. The reason we are curtailing our cut is that we have at present a large quantity of logs on hand, and by reducing our cut to this extent, we figure that we will have ample for our requirements for another year. As regards cost, we are not in a position to go into this, as we contract each year to one contractor. We are obliged to augment our price this year to the extent of 30% over last year, due to the increased price of labor and supplies. Men are not plentiful, and as far as efficiency goes, it is even worse than last year, and for this year we do not look for any better conditions with respect to labor.

Why the Cut Will Be Reduced.

Cedar Products, Amherst, N.S.—It looks like as if the lumber cut in the Maritime provinces would be less than last year's operations. Tight money and an uncertain market will be strong factors in reducing the output. Wages generally are lower and with the surplus labor in sight, men will naturally be more efficient.

J. B. Snowball Co., Chatham, N.B.—Very few parties have so far gone into the woods here while at this time last year every lumberman was in to the full limit of his capacity. We had at this season last year contracted for twenty-six millions. We are not contracting for any logs at all but are running one camp of our own to keep our horses employed during the winter and will probably get out about three millions. As far as we can find out operations will be cut about 50% as an average. There is quite a lot of pulpwood being taken out but this may stop by the first of the year as, we understand contracts are all made contingent on delivery not later than January 1st. As far as wages are concerned, men are still asking last year's wages, but the operators are refusing to pay. Last year men were paid $85. One operator advised us that he is paying $75 to good men and as low as $40. There is no change yet in the cost of supplies.

Charles H. Nadeau, Port Daniel East, Quebec.—From information that I have, I understand very little lumbering will be done, and for my part I only intend cutting a very small amount of what we did last year as the present prices would not leave any profits whatever. At present wages are higher than they were at this period in 1919, and as for supplies, etc., I find little difference in prices yet, although later on in the season they no doubt will be lower, but it would be of no benefit to a lumber operation.

Enough Lumber Already Produced.

The Eagle Lumber Co., Montreal.—We are not conducting any bush operations this year. We have nearly all our cut of 1920 unsold and consider it unwise to increase our stock at actual cost of production which is still greater this year than last year. We believe there is enough lumber already manufactured to supply one good year's consumption. With the coming cut, if it is near the average, the market will be overstocked, and prices of lumber will follow those of shingles and lath. Those who are so enthusiastic, as to go ahead and produce abundantly, while they are unable to find buyers for the stock they actually have, at a price which would cover costs,—well, that is their affair—not ours.

Very Little Done in the Camps.

George Burchill & Sons, South Nelson, Miramichi, N.B.—The present outlook is that the lumber cut this year in this vicinity will be not more than 50% of normal. Very little has been done as yet and the season is now pretty well advanced. The mills are still running in this section and as long as outside employment continues fairly plentiful, men do not care to go to the woods. It may be, that later labor for woods will be a little more plentiful. So far as supplies are concerned, we do not think, on an average, the cost will be much less than last year. Owing to the failure of the British Admiralty to remove purchased stocks, mill yards in this vicinity are very much congested, and the outlook, generally, is far from encouraging. Most operators, we think, will confine their operations to sufficient to keep their organization together.

Will Be Large Pulpwood Cut.

W. S. Loggie Co., Chatham, N.B.—We would say that in our opinion the cut of logs in the Maritime provinces this winter will be less than an average one and will not be more than 50% of last year's cut. We think there will be sufficient labor available and that it

will be efficient. Should there be any change in wages we think the same will be lower than last year's, but not to any great extent. The cost of supplies will be considerably below last season's. During the present fall and coming winter there will be a large cut of pulp wood, which will use a considerable portion of the labor which will not be needed for ordinary logging operations this winter.

Alfred McDonald Lumber Co., Peterborough, Ont.—Briefly, we find conditions as follows: Labor, fairly plentiful but poor; wages, same as last year; supplies, practically same as 1919; stocks, a little heavier than a year ago. We expect to bring out a quantity equal to about two-thirds of last year's cut.

Logging Costs Fifteen Per Cent. Higher.

William Milne & Son, of North Bay, Ont.—We are endeavoring to take out about the same quantity of logs as last year. We are having considerable difficulty in securing efficient lumbermen or, in fact, any class of men for the woods, but think the situation will improve when the fall work on the farms is finished. Wages is about $10.00 per month higher than last season, and labor is not as efficient. The supplies will average more than last season, and we think that logging costs of our lumber is practically all sold, and about 60% of it is shipped out. We expect to have our lumber all shipped out before next season begins.

Chew Bros., of Midland, Ont.—We operated three camps and had one jobber last season and we have three camps and three jobbers this season, for which we require 350 to 400 men. Owing to our inability to get the right class of men we have only been able to secure about 200 men thus far. We find it difficult to secure the necessary men possessing the standard of efficiency required. This condition appears general. We are paying a somewhat higher average of wages than last year. We sold our current season's cut of lumber and our customers have been shipping quite freely. Over one-third of the cut has already been shipped with considerable orders on file for shipment. We find it necessary to operate to the extent that we are doing to maintain our organization and keep our plant in operation during the sawing season.

A large Quebec pulp company, which also conducts lumbering operations says:

This winter operation will be about half of last year, as we have stock of logs in advance for next summer operation. The situation sighted is rather slow, but seems to improve mostly for lower grades of lumber, but is still lonesome for high grades. Wages and cost of supply are about 15 per cent. higher than last year, so, that, we do not see the way very clear for next summer operation.

Dropping Production of Soft Wood.

Clarke Bros., Bear River, N. S.—While it is a bit early to decide definitely what the next season may develop, there is a general tendency at the present time to restrict production, due to existing market conditions. So far as we are personally concerned, we have dropped very largely the manufacture of soft woods, into hardwoods, but our operation will be about on the usual scale. We will probably cut from two to two and a half million annually. The labor market is showing signs of improvement, men are more plentiful, wages are not higher than last winter, and more frequent inquiries for work are being received than for the past three years. The question of supplies will vary little from the winter of 1920, although we think any change will likely be to lower levels. We have absolutely nothing on hand unsold at the present time, and have never known stocks in the Western part of Nova Scotia, so small as at present.

Cost of Logging Higher Than Ever.

The Conger Lumber Co., Parry Sound, Ont.—We expect to take out the same quantity of pine and hemlock as we did last season, but, in the aggregate this will be small compared with what we took out in former years. We find it very difficult to get competent men for our woods operations this fall and as they are being paid higher wages than heretofore, it is going to make the cost of logging more excessive than ever. Supplies have been quite as high, if not higher, than they were a year ago. From reports we hear all lumber companies are having difficulty in securing competent men for their logging camps and it, therefore, looks to us as though the input of logs during this fall and winter will be smaller than ever.

Only Half as Many Men.

The Dennis-Canadian Co., Whitney, Ont.—We have the same number of camps in as we had last season but only half the number of men, as they are coming in very slowly. Wages are about 15 per cent. higher than last season while supplies are much the same as they were. The outlook is not at all promising for the manufacturer. The cost for getting out logs is five times what it was five years ago. Wages and supplies have advanced about 150 per cent. while the output has fallen off 50 per cent. This looks like an extravagant statement but we know it to be so in our case and think that we are no exception to the rule. Our output will likely be less than last season.

Lumber Prices Higher Next Spring.

Brompton Lumber & Mfg. Co., Bromptonville, Que.—Our camps are running about 60 per cent. of normal, due to the lack of labor, and this will reduce our cut proportionately. With reference to the present uneasiness which the alarmist is spreading throughout the country with regard to lumber prices and the anticipated decline of same in the near future, we beg to say that we cannot see how this can happen, since this year's cost of log making is much more than last year, and naturally following the basis of cost of production, lumber cannot be lower than it is now; and if business picks up the least bit on the American side, we will see higher lumber prices next Spring and Summer, than we did this year. We know some of our lumber friends who intended to cut saw logs this winter, are now cutting pulpwood, which is bringing handsome prices, and for which there is a great demand. If this policy is followed throughout the country in the same proportion as it is in our section it will cause a good decrease in the next year's output of sawn lumber; and when the old law of supply and demand is applied, one will find out that sawn lumber will be below the demand, and, therefore, prices will rise.

Small Cut on the Upper St. John.

Murray & Gregory, St. John, N. B.—The cut of logs in this section of the country will certainly be very much reduced. On the upper St. John, where in the past year there was a large cut of logs, this year there will not be 25 per cent. of the previous year's cut. As far as we are concerned, we shall cut less than one-half of the quantity of logs that we did in 1919-20. The general situation does not warrant us to cut any logs, but what shall be necessary to keep a very small organization together. There are no inducements for operators to go into the woods this winter. Prices at the present moment show absolutely no profit, in fact, there can be no sales made at any price, as both English and American brokers refuse to buy even at less than production cost. Labor certainly will be more plentiful in this section of the country than a year ago, and at the present time more men are offering themselves for the woods than at any time in the last five years. At the present moment men are asking the same wages as a year ago, but no operator is taking them on, unless they wish to go at in the vicinity of $50.00 a month and found. The general costs of supplies at the moment are a shade higher than a year ago, but reductions are being made from week to week, and the operators are only buying from hand to mouth, and camp supplies will certainly be worth considerably less than at the present time. Hay and oats are now showing considerable weakness, and general supplies are on the downward trend. The stocks at the mills are pretty heavy, and production costs during the past year have been higher than ever, but the majority of mills in the district have sold these goods for the past season. Much stock is in the hands of brokers, strong financially, who will not sacrifice them. So that, with the reduced cut all over this country, as well as in Maine and New England in general, there should be a steadying of prices towards spring.

Will Cut About Same Quantity.

The Hocken Lumber Co., of Toronto, whose mills are located at West River, are operating three camps this year, and along with the logs which they have on hand, they will have equally as large a cut next season as during the present one. Due to the dry spell last spring, it was impossble for a good many of the lumbermen of the North shore to get down all ther logs to the mills, and quantities were "hung up" at various points. The Hocken Lumber Co. finds that labor is still scarce and inefficient. Wages are a little higher than last year but may drop about Christmas time. The expense of running a camp, notwithstanding the reductions in the prices of potatoes, sugar, oats and other commodities, will be about the same as last season, as the effect of the decrease will not be felt for several weeks yet owing to the large amount of goods in hand and already contracted for.

No Decrease in Quantity Sawn.

Graves, Bigwood & Co., Toronto and Byng Inlet, have the same number of camps as last season and have a large quantity of logs on hand which, along with those cut in the bush, will make their production next year equally as large as for the season just closing. Labor is a little more plentiful than it was some time ago, and men in the camps less restless. Wages are running from $70 to $75 in the bush and other supplies about the same. Mr. W. E. Bigwood states that, although there may not be as many men or as many camps in the Sudbury district this season as last winter,

still the cut along the north shore during 1921 will be equally as heavy as that during 1920 by reason of the fact that many logs were held up owing to low water, dry weather, etc.

G. A. Grier & Sons, Montreal.—As far as we can find out, stocks of lumber do not appear to be at all excessive. Certain desirable sizes and grades in spruce and white pine seem to be very closely sold up even at the present time and this along with the poor demand which has prevailed for some weeks. There is, of course, accumulating a fair surplus of undesirable sizes, which is always the case under conditions such as those now prevalent. We have not operated any camps ourselves for some years. We are advised by our travellers that many of the small mills are finding it rather difficult to finance their winter's operations, and, on account of the tightness of money, some of these smaller manufacturers will not be able to take out any logs this winter. If this is the case to any great extent, it should serve to reduce next year's output of lumber very considerably.

The Shives Lumber Co. of Campbellton, N. B.—In keeping with all the other operators here we do not expect to get out the present logging season over one-third of the logs we got last year. Labor is very scarce with us, and through the pulp mills up west coming here and combing our labor all the time and continually offering them more wages, they are going from here, and as a result we do not have men to run our mills or even to supply our operations on the basis of the proposed production. So far as logging supplies go, while some of them this season are costing us less than last year, others are costing a great deal more, and altogether we figure that the logs delivered into the booms next season will be even more expensive than they were the past spring. We have heavy stocks everywhere, as while we have sold considerable, the transportation problem has been acute with us for many months, and through scarcity of cars we have been unable to ship anything like the wood goods we otherwise could have done, and as a result we are now getting cancellations every mail and altogether the situation with us is very bad indeed.

The Victoria Harbor Lumber Co., Victoria Harbor, Ont., are operating three camps this season compared with five last winter. The company state that their cut of lumber next year will, however, be equally as large as during the season just closing as they bought a considerable quantity of logs which, added to those that the firm themselves will take out, will give them a full quota. Wages are a little stiffer than last year and also expenses of camp equipment and maintainance. The supply of labor is better than it was a year ago and conditions are steadier among the men.

Percy Herron, Burwash, Ont., reports that his mill is still running, and he expects to be able to cut until well into next month. Mr. Herron will take out a little larger quantity of timber this coming winter than last and has four camps in operation. He has closed contracts for a large portion of next season's cut.

"Planning Service" for Home Builders

But some one awoke one day to the fact that women are the real home builders; that they are the "instigators" of new floors, built-in book cases and other things made of the products sold by the retail lumberman. And so, with amazing rapidity, there spread the propaganda of "Home-Building Service," which, reduced to its lowest terms, meant reaching the real ultimate consumer, the "lady of the house."

A man out in Kansas—D. J. Fair, a retailer of Sterling—was one of the first to see the light and one who not only brushed up his lumber yard but went farther and installed what he called a "planning service," designed to reach the prospective builder of homes and also those who wished to remodel old homes.

Mr. Fair became a prophet of the new deal and went about among his fellow retailers at conventions all over the land, and preached to them the gospel of "service" in general and the "planning service" in particular.

The average home-owner builds but one home in a lifetime," said Mr. Fair, "and it's up to the lumberman to help him build it right." So he went to work with that idea in his head and proceeded to show the farmer and small-town home-owner how to "build it right."

"You can't blame him if he follows false gods and is attracted by the pictures in the catalogues," he said—and put up photographs of the houses he had furnished the lumber for and the floor plans, and on them he tacked the bill of materials.

It's just as true of homes as it is of millinery that the attractive design is selected because it pleases the eye," was another of the axioms he fired at his fellow retailers—and he put up beautiful water color paintings of bungalows and farm houses with trees and flower gardens in full bloom, and showed his customers how they could get such a home.

"I would have the floors scrubbed and the windows washed and the ice and bacon and eggs in the ice-box when the key is delivered," he finished—and his fellow lumbermen sat up and took notice. He hasn't got that far yet, but he will.

"Selling the home complete" became a slogan among the retailers and the "planning service" became a new gospel. Adolph Pfund, secretary of one of the big retail associations, seized upon the idea and instituted a planning service for the members of his association, thereby making it possible for the smallest dealer in the most remote town of his territory to have a complete, up-to-date sales-pulling service.

Among the first to adopt this scheme and to install a planning service was George La Pointe, Jr., manager of the O. & N. Lumber Company, of Menomonie, Wis., and of the La Pointe Lumber Company, which control twenty-nine retail yards in various small cities in the north. Each yard is neat, attractively painted and has a wide-windowed display room, the window always being filled with model colors and sample interior finishes.

Mr. La Pointe's service department at present consists of a corps of draftsmen and estimators whose duty it is to follow the customer's ideas and to design a home, a barn or a whole outfit of farm structures in accordance with those ideas, suggesting a convenience here and avoiding a difficulty there, and giving an estimate on the cost of the completed structure.

Thus when Farmer Jones plans a new group of farm buildings—say a silo, an implement shed and a hog farrowing house—the planning service helps him to select the style of building best suited to his purpose and helps him to make the best use of his space. It may also throw in a suggestion or two as to the new style of self-feeders and some portable grain bins.

The yard manager is provided with plan books and prospect blanks. Each yard manager is educated to handle the customer in such a way as to find out his exact needs and wishes and to guarantee satisfaction to him. He first ascertains from the "prospect" the type of house or other structure desired, the number of rooms and kind of architectural features wanted, and in a general way all the other other larger details.

Then the prospect blanks are filled out with this information and sent to the service department, which is thus enabled to make a tentative floor plan and a water-color perspective of the job. These are then sent back to the yard manager to be presented to the customer. If the plan and perspective are found satisfactory, the yard manager at once quotes a price on all the material needed for the completion of the job, as each yard handles all building materials. This price is guaranteed; that is, the company guarantees that the figures will cover the price of the material.

If the estimate results in a sale, the service department makes regular blueprint plans and detailed specifications.

At the head of the service department is A. W. Holt, who has made a life study of estimating building "by the square," or on a unit cost basis. He uses in this work a "Lumbermen's Building Estimator," compiled by himself and consisting of elaborate tables to assist in accurate and rapid calculations. The plan can be operated by the small dealer as well as the large, even where a professional draftsman is not employed, the planning service offered by the associations being available with bills of materials, and the "Estimator" making it possible for any lumberman to calcuate costs easily and quickly. Mr. La Pointe doesn't hide his light under a bushel, either, but advertises this fine service of his far and wide. The guaranteed price feature is advertised under the name of "The Holtbid," because Mr. Holt puts the price on the job.

"Where is My 'At" is Proper

An English visitor called at the office of a Toronto wholesale lumber firm the other day and in the course of his conversation remarked that he was much impressed with Canada, its resources, its scenic beauties and its splendid industrial development.

"The only trouble with you Canadians is that you use such beastly English."

"How's that?" enquired the wholesale lumberman.

"Well," continued his visitor, "I was going up Yonge St. the other day in a tram and a passenger (who had evidently gone past his destination) ran up to the guard and excitedly exclaimed "Where am I at?"

"That's beastly bad. Over 'ome we'd never think of saying that bally thing."

"What would you say?" enquired his listener.

"Why, where is my 'at?

Pulping of Jack Pine is Satisfactory

Results Do Not Indicate That an Excessive Amount of Resin is Present—Fully Equal to Spruce

By F. I. Ritchie*

Some years ago the Wayagamack Pulp & Paper Company, Limited, Three Rivers, Que., was equipped with complete apparatus for the purpose of experimental pulping of all the different species of wood.

Experiments have been systematically carried on for a number of years with the object of discovering what different species of wood were suitable for the different qualities of pulp required for the manufacture of all kinds of paper.

In the province of Ontario and Quebec, there are enormous tracts of land timbered almost exclusively with what is known as jack pine, also called Banksian pine, or cypress.

For this reason, it was important to ascertain if jack pine could be used for the manufacture of sulphite pulp and ground wood, in spite of all the prejudice against its use for this purpose.

A preliminary examination of jack pine, with regard to its resin contents seemed to indicate that the resin was not present in quantities which would prohibit its use for the manufacture of sulphite pulp or ground wood, although jack pine seems to have had to carry the blame for all the pitch troubles which all paper mills suffer from, more or less.

If jack pine is cooked in a mixture with other wood, trouble is quite likely to result, because jack pine apparently requires a stronger acid and a longer cooking time than other species of wood.

If, however, jack pine is cooked alone, the company's experiments, as well as those reported below, would indicate that jack pine will produce a sulphite pulp which is in all respects equal to spruce pulp. The fibre from jack pine was found to be about .25 mm. longer than spruce fibre, which will make it particularly suitable for newsprint.

Some years ago, by special arrangement with George McDougall, of the Jacques Cartier Pulp & Paper Co., of Pont Rouge, Que., the Wayagamack Pulp & Paper Company, Limited, shipped a quantity of jack pine to be pulped into ground wood at the Pont Rouge plant.

The pulp obtained from this wood proved to be as good as, if not better than anything that could be purchased on the market..

No Evidence of Excessive Pitch.

The Wayagamack Pulp & Paper Company would like to call the attention of the trade to the fact that from all the experiments made, there is no evidence of excessive pitch which could be traced to the use of jack pine.

By arrangement with Messrs. Arthur D. Little, Inc.,. of Cambridge, Mass., sulphite cooking experiments were performed at their laboratory, and the Wayagamack Pulp & Paper Company have pleasure in publishing the principal results with the consent of the Arthur D. Little, Inc., in the hope that the facts will be of interest to the industry.

It should be carefully noted that the figures obtained from the experiments of Arthur D. Little, Inc., seem to demonstrate that the results obtained from the measurements of fibre length and content of pitch for jack pine as against spruce, show that the jack pine is **fully equal to spruce in every respect.**

The following is an extract of the detailed report by Arthur D. Little, Inc.:

Fibre Length and Pitch.

"The fibre length of pulp from jack pine was rigidly compared with that of spruce and the results of our measurements are as follows:

	Jack Pine.	Spruce..
Maximum length of fibre.....	3 mm.	2½ mm.
Minimum length of fibre	1¼ mm.	1¼ mm.
Mean	2.26 mm.	1.92 mm.
Per cent. of fibres over 2 mm.	80%	73%

It will be observed that the fibres in the jack pine are superior in length to those of spruce and should therefore be an excellent substitute for the spruce, especially in connection with newsprint.

As the content of pitch in woods is practically always as indication of their behavior in either the sulphite or ground wood process, we have made an either alcohol extraction of this jack pine to determine the total resins and waxes. These were found to be as follows:

Alcoholic extract	2.28 per cent.
Ether extract*	.30 "
Total fats, resins and waxes	2.58 "

*Extraction made successive to alcohol extraction.

Results of this analysis do not indicate that an excessive amount of resin is present and, furthermore, that this amount of resin does not necessarily preclude the use of jack pine in the sulphite process.

It is to be hoped that any person who has made experiments along this line will publish the results of the experiments, for the benefit of all concerned.

*Wayagamack Pulp & Paper Co., Three Rivers, Que.

Dickie Sawmill Burned to Ground

The large mill of Rufus E. Dickie, Stewiacke, N. S., valued at $55,000, was totally destroyed by fire recently, together with 3,500,000 feet of lumber valued at $115,000. The mill was insured for $30,000. Mr. Dickie states that the greater part of the lumber or a little over 3,000,000 feet was sold and held in stock for the British Government, and he does not know whether or not this was insured.

The fire started over the boiler-room and although the watchman was right at hand with water, the blaze spread with such rapidity that he could not control it. The day being Sunday, the greater part of the ordinary crew were away, and by the time sufficient help and apparatus arrived from the town, a distance of a mile and a half, the mill was beyond saving. It was thought that the

The Dickie sawmill at Stewiacke, N. S. and lumber piles

lumber could be rescued, but the wind changed into a bad quarter and blew the flames directly into the large piles, although the fire was held in check for a considerable period. The Truro chemical engine and firemen came out by a special train, and this apparatus, along with the chemical engine from the town of Stewiacke and the bucket brigade, (included in which were a number of women and girls,) did heroic work. Had the wind kept in the same quarter as it was when the fire started, the lumber would have been saved. The machine and blacksmith shops escaped.

It is the intention of Mr. Dickie, who is one of the leading lumbermen of the Maritime Provinces and a member of the Board of Directors of the Canadian Lumbermen's Association, to rebuild next spring on the same site. During the winter he will get the necessary machinery together and have it ready for spring installation. In the meantime there are about 1,300 M. logs in the river which must be sawn before the stream freezes over, and two large portable mills are now doing this work with night and day crews.

The accompanying illustration shows the mill which was wiped out by the flames. All the lumber seen in the background was burned and considerably more.

Producing Fibre From Corn Stalks

"It is not surprising, in the light of past experiments, that relief to the present paper situation should come from such a source. Fiber suitable for paper-making has been produced from a number of plants, among them corn and cotton stalks. The pulp from these sources has been made only on a laboratory scale, however, because two chief difficulties stood in the way of commercial exploitation of the process. In the first place there is not a sufficient supply of any one material, and it is too expensive to gather corn or cotton stalks from a wide area. The second, and perhaps the most important, difficulty is that, because the material is not compact, only a small amount can be placed in the pulp 'digester' at one time, making the production very expensive."

A really smart man will only let you lie to him once. Which is a mighty good business reason for telling your trade the truth.

Dull seasons were invented especially for the purpose of giving the lumber merchant something special to hustle for.

Busy Career of Eastern Lumberman

Hon. Robert Irwin, Shelburne, N. S.

Hon. Robert Irwin, who is managing-director of the Sutherland Lumber Co., of Shelburne, is widely known in Nova Scotia. He was first elected to the Legislature of the Province in June, 1906, and re-elected in 1911, 1916, and in the contest which took place a few weeks ago. Each time Mr. Sutherland has had his majority increased which is an indication of the hearty endorsation of his public career and the confidence which the people repose in him. He was elected Speaker of the House of Assembly in 1917 and occupied that honorable position until the legislature was dissolved and the general elections brought on.

Mr. Irwin is a native of the county of Shelburne for which constituency he sits in the House, and has for his colleague Hon. E. H. Armstrong, Minister of Public Works & Mines in the Murray Government. Mr. Irwin is of United Empire Loyalist descent, and was born in 1865. He is secretary-treasurer of Etherington Gas Engines, Limited, of Shelburne. The Sutherland Lumber Co., of which, as already stated, he is managing-director, recently took over the lumber business and limits of Bower Bros., at Shelburne and Clyde rivers. The new company have a portion on each of these rivers and expect to have a large cut of pine, hemlock and spruce with some hardwoods at their mills at Shelburne and Clyde. The timber limits recently purchased by the Sutherland Lumber Co. are among the finest remaining in the county of Shelburne.

Reminding Northern Mills of the Tax

The duties of W. H. Buller, Inland Revenue Officer, Peterboro, Ont., carry him at certain periods far away from the comfortable, commodious offices in the Customs building. His objectives are generally "stills" or "taxpayers," but since the former business does not flourish as it did a year or two ago, and the government put the collection of the luxury and sales tax in the district under him last May his trips now are practically all made to stir up delinquent storekeepers, wholesalers and manufacturers.

A northern trip, with this object recently carried him far afield but the results he anticipated will warrant the time and trouble involved. One day he spent in Kinmount, the next day he motored through to Maple Lake, Carnarvon, Minden, Gelert, Lochlin Donald and on to Haliburton. Besides calling on all the stores in these places and impressing on the proprietors the necessity of making speedy and accurate tax returns he paid a flying visit to all the saw mills in the district. If these mills will sell their lumber locally they are required to pay a 2 p.c. sales tax, if sold to a wholesaler only 1 p.c. Mr. Buller explained fully to the managers the tax and how to make the required returns. On the following day, Gooderham, Tory Hill and Wilberforce were visited with the same object and the next day the revenue officer returned to Peterboro.

The Passing of Hon. E. H. Bronson

Hon. Erskine H. Bronson, who was for many years prominently associated with the lumber industry and its development in the Ottawa Valley, passed away recently at his home in the capital of Canada after a long illness. Mr. Bronson was in his 76th year, being born in Warren County, N. Y. His father came to Ottawa first in 1849 and in 1852 having sold out his lumbering business on the Hudson moved his family to the capital, and built the first sawmill in the Ottawa valley to supply the export trade.

At that time the pine trees for export from Quebec were sent down the St. Lawrence in "rafts" of square timber. In the process of squaring the logs much valuable lumber was left in the forests to increase the danger of destruction by fire. The elder Mr. Bronson was one of those lumber men who introduced the method of cutting the tree trunks into sawlogs, a change which increased very greatly the amount of merchantable lumber obtainable from every tree, and also facilitated the work of flotation of logs by shortening them.

The erection of sawmills at Ottawa, where water power was abundant and controllable, set the pace for other localities, and before long the squaring of timber entirely ceased. For a whole generation sawmills by the hundreds have been producing sawed lumber, laths and shingles all over the northern parts of Ontario and Quebec, the railways doing a large part of the transportation. The problem of power production for mill work has been much simplified by utilizing waste material as fuel.

The late E. H. Bronson, when a youth joined the Bronson and Weston Lumber Co., and acquired an interest in the company in 1867. On the death of his father he succeeded him as president of the Bronson and Weston Lumber Co. in 1889.

Mr. Bronson was also president of the Bronson Co., Water Powers and Manufacturers of Ground Wood Pulp. 150 Middle street, also president of the Ottawa Improvement Co., vice-president of the Ottawa Light, Heat and Power Co., president of the Ottawa Power Co., and director of the Ottawa Electric Co.

He was also director of the Little River Redwood Co. at present carrying on extensive lumbering operations in California. The deceased was a worthy citizen, and public spirited man and took a deep interest in everything that tended to advance the welfare of Ottawa. He was a member of the Ottawa City Council for eight years and of the Public School Board for fourteen years. He represented the capital city in the Ontario Legislative Assembly from 1886 to 1898 joining the Mowat Government as Minister without portfolio on Sept. 10, 1890, and holding a similar position to the Hardy Government.

The late Mr. Bronson is survived by his wife, one son, Mr. Fred Bronson, and one daughter, Mrs. R. A. A. Johnston, both of Ottawa; two brothers, Mr. W. J. and Mr. F. P. Bronson and a sister Mrs. Levi Crannell, Ottawa.

Mr. Bronson enjoyed the respect and confidence not only of the members of the lumber industry but an unusually large circle of friends, and his death removes another pioneer lumberman who played his part in a great vocation and played it honorably, fearlessly and well.

Possesses Active Canadian Section

Amongst British Chambers of Commerce established abroad, that of Paris is conspicuous for its enterprise in serving the requirements of British Trade and Industry, and, furthermore, possesses a very active Canadian section.

The committee of this section is composed of persons themselves interested in trade with Canada, and, consequently, is in a position to supply all the requirements of Canadian members. The membership of the chamber is restricted to firms of British Governments, and carries on its most necessary work entirely through the subscriptions of its members. To enable the chamber to take up a firm position and thus sufficiently combat foreign competition, it very naturally deserves to continue to add to its membership.

Amongst other things it puts its members into touch with suitable agents in France, obtains information on the commrecial standing of French firms, supplies exact customs classification of goods, notifies changes in French customs duties and proposed commercial legislation, communicates enquiries from French buyers of British goods and, furthermore, publishes a very useful bulletin of information.

Applications for membership should be made to the Secretary of the Canadian Section, British Chamber of Commerce, Incorporated, 6, rue Halevy, Paris.

Starts Business on His Own Behalf

Among the new firms which have been started during the last year and have already established a reputation is that of Leslie C. Owen & Co.; Ltd., Liverpool, Eng.

Mr. Leslie C. Owen joined the firm of Joseph Owen & Sons, Ltd., in the year 1903 as an apprentice, after having completed his education at Marlborough College, Wilts. He went through all the different branches of the business, thus acquiring a thorough general knowledge of the timber trade. In 1909 he was appointed foreign buyer, and has made several visits to the United States and Canada, where he is well known in the various lumber markets and has made many friends. In 1913 he was appointed a director of oJseph Owen & Sons, Ltd. During the war he was commissioned in the Royal Air Force. In July last he took control of the wholesale department of the firm until in consequence of the sale by his family of their entire interest in the concern, he severed his connection with them and commenced business on his own account under the title of Leslie C. Owen & Co., Ltd., with new offices at The Temple, Dale Street, Liverpool, and storage sheds and sale yard at Rimrose Road, Bootle.

Word was received at St. John recently of the loss of the three masted schooner "Three Marys", while bound from Mobile for Havana with a cargo of lumber valued at $150,000.

"It's the hit dog that squeals," Sam Jones the evangelist used to say.

Customers are Confused on Shingle Buying

Eastern Dealers Declare There Should be Uniform Plan Adopted by All the Mills —More Arguments For and Against the "Square Unit"

There was presented in the "Canada Lumberman," of October 15, numerous views of representative lumber retailers in various parts of the Dominion on the new square unit of packing and selling red cedar shingles as contrasted with the sale by the M or four bundles to the M.

Further interviews with dealers are given in this edition, and it is interesting to note the attitude of the handlers of the wooden shingle. Some strongly favor the new square unit for reasons which have been outlined in previous articles, while others declare that the present order is good enough for them, and they have no reason to complain of the sale by the M.

There is, no doubt, a great deal to be said on both sides and as this is a live topic at present time, its discussion will be continued until all the points are brought out and everything worth while that can be said on either side has seen its way into the columns of the "Canada Lumberman."

The Green Lumber Co., of St. Thomas. Ont.: "We have not heard very much on the matter of the new packing and sale of shingles by the square and do not think it would make much difference in our trade. If the new plan were adopted, it might avoid some confusion in comparison of shingles, vs. asphalt shingles and other roofing, in the matter of estimating. We had heard it reported lately that the idea of packing shingles in squares had been abandoned.

John Howes, of Harriston: "We have not yet had a single inquiry for shingles packed by the square, and for my trade here we cannot see that the change would be of any benefit."

All Mills Should Adopt Square.

D. C. Baird, St. Mary's: "Regarding shingles, I would say that I have been handling them packed by the square and find it satisfactory to a man after he understands the pack, but it is very difficult to explain to the buyer the price as the price "packed by the square" has to be compared to that of "packed by the thousand." So far as I can learn, no dealers around here have been handling shingles by the new pack and, therefore, have been quoting by the square, old pack (viz., three bunches). On this account, we have come to the conclusion that the new method of packing is not satisfactory to the trade and will not be until all mills adopt the standard pack."

Would Like to Give Square a Trial.

The Houston Company, Limited, of Tweed: "No shingles packed by the square have reached this district yet. Although we have received several carloads of shingles, they have all been packed by the thousand. We do not know of any reason why shingles packed by the square should not be perfectly satisfactory, and on account of the competition of steel and prepared roofing would like to give them a trial."

G. D. McPherson, of Merlin: "In regard to shingles, we have never handled them in any other way than by the thousand. In competition with asphalt and other lines of roofing, it is only right to quote by the square. The trade thinks that 1,000 constitute a square which is not placing the value of shingles on a fair basis. There is no use, however, of one firm selling one way and another firm another, as that is confusing to all and, therefore, we stick to the thousand method entirely."

J. A. Sykes, Oshawa: "We have never handled the square shingles; so cannot give an opinion concerning them, but our customers and ourselves find the thousand method very satisfactory. Shingles here are generally laid 4½ to the weather."

Would Like to Get Full Count.

A. L. McDermid & Co., of Apple Hill, Ont.: "We have not sold any of the shingles yet that are packed by the square, and do not think that they will meet with the requirements of our customers. We would not care to handle any put up this way if we can get the full count. The fact of the matter is that we have some objections to the 18 in. shingles and also the N. B. shingles because they are short count. We prefer the full count in all lines."

J. Bartholomew, of Stouffville: "In this section of the country shingles are almost all bought and sold by the square. As far as my experience goes, I think it is the proper method of selling shingles and is the fairest and most correct in the long run."

W. H. Eves, of Newmarket, says that he does not purchase any shingles by the square, and it is impossible for him to state which is the better system. Personally, he would prefer having them shipped by the square after the people in that district got used to them. "It would take some education to get customers started," adds Mr. Eves.

The R. E. Butler Lumber Co., Woodstock, Ont.: "We have handled shingles packed by the square and have shingles on hand the present time packed both by the square and by the thousand. As soon as we clean up the squares we have on hand, we do not intend to handle any more unless all the manufacturers put them up in this way, as it is confusing to our customers to quote both ways. We cannot say that our customers ask for the square unit, but on the other hand, they do not object to buying them, and it is easier to explain to them how many shingles it will take to do their job. We think, however, that the biggest advantage is in being able to compete with other roofings that are practically all put up to cover a square, as often a customer will compare the price of a thousand shingles with a square of other roofing, no matter how much you explain to him that a thousand will cover, more than a square."

The Paisley Lumber Co., Paisley, Ont.: "The square unit takes in this part of the province. We do not know the reason unless the shingles have always been sold here that way by the local mills."

Sees Several Advantages in New Way.

D. Aitchison & Co., Hamilton, Ont.: "The square unit has not caught on as well as it might have done because the mills at the Coast have not all adopted it. In Hamilton, all shingles are sold by the square, that is, three bunches for a square. We buy them at the Coast four bunches to the M, and, as stated, sell three bunches for a square, which the square-pack people claim is not a "real square" and will not cover a square unless laid about 5 inches or more to the weather. The advantage in selling by the square, as lately adopted by some of the makers at the Coast, is that a square of shingles can be fairly compared with a square of manufactured roofing materials, and that a square, or 100 square feet, is more easily understood by the average builder."

A. K. Hansen & Co., Regd., Quebec, P. Q.: "We may say that we are unable to give our idea regarding shingles packed by the square or by thousand. This year we have received only two cars packed by squares. All the others were packed by the thousand."

Rhodes Curry, Limited, Amherst, N. S.: "With reference to the packing of cedar shingles by the square, we may state that we are really not in a position to give you much information in this regard as the local territory is a poor field for B. C. cedar shingles. We sell almost exclusively the New Brunswick product, which, of course, is put up by the thousand."

Wm. Watt, Halifax, N. S.: "In regard to the square unit on shingles, the new plan has not worked out satisfactorily here as contractors dispute the quantity in the bundles and desire one extra bundle thrown in on every eight. They claim that the count of shingles is not correct. I am endeavoring to sell all the square unit that I have and handle only shingles packed by the 25 tiers to the bundle or the old-fashioned packing of four bundles to the M."

Firm Advocate of Square Unit..

J. G. Schaefer, of the Palmerston Planing Mill, Palmerston, Ont.: "We find the square unit is the best. The customers are better satisfied and they like it better than buying shingles by the M. In the first place, they get a square, which means enough shingles to cover a space, 10 x 10, laid 4½ inches to the weather, where the others sold at three bundles for a square will not cover that many feet, even if the shingles are laid 5 inches to the weather. We would sooner handle the square unit, and we now sell all our shingles that way."

Wm. R. Cutting, of Simcoe, Ont., says he is in favor of the square pack (the honest square). Nine-tenths of the people don't know that they were ever packed any other way, "and I am not telling them," he adds. Its advantages are that it enables the lumber dealer to meet the ready-roofing man on an even footing and beat him every time. Its disadvantages are that it hits the lumber dealer in the city and mostly those who buy by the thousand and sell three bunches to a square. "St. Peter will some day ask those fellows why did they beat each one of their customers out of twenty-six courses of shingles," he concludes.

J. R. Eaton & Sons, Limited, Orillia, Ont.—We would say that

among our customers, and our territory covers quite a range, we have not had a single customer asking us for the square unit in preference to the thousand. We admit that the price on the square unit compares more readily with ready roofing prices; further, with the present method of putting up the B. C. shingles by the square unit and the thousand the prices quoted the contractor or private individual are frequently misleading. We have often during the past summer found that quotations were given so much per square in competition with quotations by the thousand and invariably the purchaser's attention had not been called to the different methods of putting up shingles. In the last analysis it is really immaterial which way the shingles are put up as long as both the buyer and seller understand the difference and are perfectly frank with each other, but we do feel that either one or the other method should be followed.

Dual System Leads to Confusion.

N. M. Bearinger, of the Elmira Planing Mill Co., Limited, Elmira, Ont.—We have an extensive country trade and are handling shingles packed both by the square and by the thousand. The packing by the square seems to have taken well so far although the fact that we handle both has often brought us into difficulties. One customer would buy by the square and the next by the thousand. Then they would compare prices by the bunch and we have often had to make hasty explanations in order to save our reputation, as they would invariably not consider the size of the bunch and would accuse us of having two prices for the same article. As far as our trade is concerned, we think that either way of packing would be acceptable, although we would earnestly suggest that only one method of packing should be adopted by all manufacturers so as to avoid the confusion that will be caused when the retailer handles both. The fact that four bunches laid 4½ inches to the weather are guaranteed to cover a square often is a good talking point in favor of the new way of packing.

The Piercey Supply Co., of Halifax.—Regarding Western shingles sold by the square, we may say that up to the present time no comments whatever have been made by any of our customers, therefore we have nothing to offer as to the merits of packing in this way. .

Should Agree Upon One Method

The Dartmouth Lumber Co., of Dartmouth, N. S.—We cannot say the square method is welcomed by anybody. If all the manufacturers had agreed to make the change, we do not believe many complaints would have been made, but it is a mistake to have two size of bundles on the market. There is a temporary advantage with the square method in causing customers to believe they are buying at a considerable savings but this is soon removed when they see the size of the bundles. While we realize the fairer comparison of the square method with patent roofing materials, unless universal adoption can be secured no change should be made. We handle both kinds and they sell equally well, but greater care has to be exercised in quoting on shingle enquiries, because the other dealer may offer his squares against our thousands. On this account, we have found it necessary to quote both ways on all B. C. grades. The dealer should not be burdened with this extra trouble and it is up to the manufacturers themselves to agree on one method only; failing this let well enough alone.

The Shortage in Paper Products

The development of the pulp and paper industry in Canada has been financed to the extent of 75 per cent. by American capital, says "Printer and Publisher."

Trade follows the source of the capital as a general thing, so this 75 per cent. point makes a very good place from which to start any discussion of the pulp or paper industry.

The demand for paper increases by feet, while the supply increases by inches.

The Governments of Canada, Federal and Provincial, should be made to see the urgency of the situation, and newspapers would be within their rights in bringing every influence to bear on members of the various houses to see to it that Canadian publications are supplied.

There is no prospect, even at present figures, of a betterment in the situation. There seems to be no tendency on the part of publishers to cut down. Many of them feel that it is useless to make any individual or isolated attempt at curtailment, while other papers are firing ahead and turning out tremendously large issues that carry a large advertising revenue.

Unless a slump sets in, which would cause a falling off in the number of pages published, there is little prospect of the paper supply improving.

An Eastern Lumber Exporter

John Begg Brand, of St. John, N. B., is a well-known lumber exporter, who has been identified with the business all his life. His offices in St. John are in the B. N. A. Bank Building and he has also a branch in Hagerstown, Maryland.

Mr. Brand is of Scottish birth and came to America twelve years

J. B. Brand, St. John, N. B.

ago as buyer and shipper for Glasgow Log Importing House. He returned to Scotland two years later but came back to Canada the following year and was with Robert Bury & Co., Toronto, for a considerable time. For several years past he has had an office in St. John and acted as spruce buyer in the Maritime provinces for the Woodstock Lumber Co. of Boston.

Lumber Workers Withdraw From Union

That the One Big Union of Canada during the five months from January to May last, was receiving per capita tax on a membership of but 19,510, instead of the reported 41,500 and that no per capita tax has been paid in many cases since the first of June, that the withdrawal of the lumber workers of British Columbia from the recent convention, because of differences with the executive, meant a withdrawal of a membership of over 9,000, are some interesting details of the inner workings of the One Big Union, disclosed in a report of the convention at Fort William.

Will Start Seaplane Forest Patrols

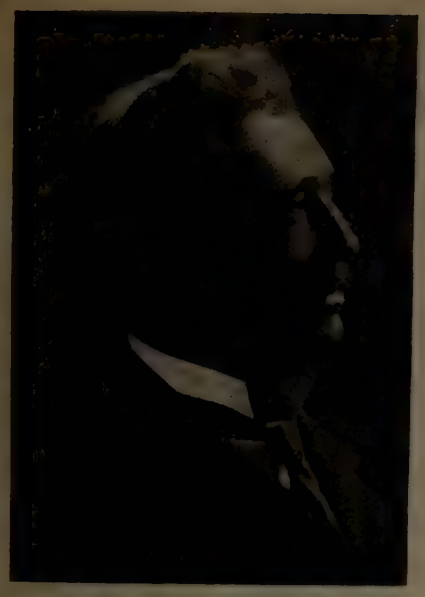
Major Claire McLaurin, D.S.C., superintendent of the Jericho station, and D. Roy Cameron, district forest inspector in charge of Dominion forestry work in British Columbia, are planning shortly to undertake experimental reconnaissance and mapping work, and are discussing arrangements for next season, when it is the intention of the department to inaugurate seaplane forestry patrols, carried out by the Canadian Air Board in co-operation with the Dominion Forest Service in the railway belt of British Columbia.

Open New Office in Buffalo

The Jeffrey Mfg. Co., of Columbus, Ohio, have opened a branch office in Buffalo at 1108 Marine Trust Building, which is in charge of H. W. Scott. Mr. Scott has had a long and successful experience in sales and engineering work of the company, which especially fit him to take up his new duties. The new Buffalo office of the Jeffrey Company will enable that organization to render more efficient service and maintain closer co-operation with their customers in western New York State.

Defendant was Honorably Acquitted

Word received from Parry Sound district is to the effect that one of the persons who was charged by the Georgian Bay Log Pickers Association with receiving stolen logs has been honorably acquitted. On October 20th, the case came up for trial, and the defendant was exonerated after all the evidence had been presented. The defence was not called upon at all, the judge holding that the grounds on which the charge was based were not sufficient to warrant any such action as that taken.



Hon. E. A. Smith, Shediac, N. B.
Late Minister of Lands and Forests, who retired.

Hon. Wm. Currie, Campbellton, N. B.
Late Speaker of the Legislature who retired.

Wm. S. Sutton, Woodstock, N. B.
Late Member for Carleton, who retired.

Hon. J. P. Burchill, South Nelson
Late Member for Northumberland, who was defeated.

Many Lumbermen Elected in New Brunswick

In the recent provincial elections which took place in New Brunswick there were several lumbermen candidates who were successful at the polls, when the Foster Government was returned to power. A few were defeated, and some did not again seek political preferment at the hands of the people.

Among those, who voluntarily retired from public life was Hon. Wm. Currie of Campbellton, N.B., former Speaker of the Legislature. Mr. Currie is manager of the Continental Lumber Co., and was in public life for many years.

W. S. Sutton of Carleton County is another lumberman who decided to step down and out. Mr. Sutton is manager of the Woodstock Woodworking Co. and is also indentified with a number of other industries. He lives in Woodstock.

Hon. E. A. Smith, late Minister of Lands & Forests, also withdrew. He represented Westmoreland County and was a valued member of the Foster Cabinet for a number of years. Hon. Mr. Smith's home is in Shediac. During his incumbency of office he inaugurated several progressive moves including the Forest Act and the Forest Fires Act.

Mr. Burchill Goes Down in the Fray.

Among the lumbermen who went down in the contest was Hon. John P. Burchill of Northumberland County. Mr. Burchill is a member of the firm of George Burchill & Sons, lumber and general merchants, South Nelson, and previous to the recent conflict was the hero of no less than ten political fights, in eight of which he emerged triumphantly. Mr. Burchill was Speaker of the Legislature for seven years and his reverse as a Government candidate at the polls will be regretted by a large number of friends in the industry.

Thomas B. Carson of St. Johns County, who is a well-known lumberman and contractor, was a Government candidate in the recent campaign and although defeated, it is stated that the status may be changed after a recount which will take place shortly. Mr. Carson was first elected to the New Brunswick Legislature in 1917, and previous to that had taken an active part in municipal life.

Several Supporters of the Government.

Among the lumbermen candidates who supported the Government and were returned were G. Herbert King of King's County, John A. Young of York County, and Robert B. Smith of Sunbury County. All these gentlemen are well-known representatives of the lumber interests and have served a number of years in the legislative ranks.

Robert B. Smith lives in Oromocto, is manager of the Valley Lumber Co. and president of the St. John River Dredging Co., and a director of other organizations. He was a member of the last Legislature.

John A. Young is both a farmer and a lumberman and operates a mill at Taymouth. Mr. Young was first elected to the Legislative Assembly in 1908 and was returned in 1912 and again in 1917.

G. Herbert King is a member of the Executive of the New Brunswick Lumbermen's Association and manager of the King Lumber Co. of Chipman, which concern cuts on an average from 5,000,000 to 7,000,000. Mr. King was first returned as a member of the Legislature in 1917, and previous to becoming a member of that body. served two terms in the Municipal Council for Queen's County.

On the Opposite Side of the House

Among the Opposition lumbermen candidates elected were John L. Peck, Albert County, James K. Pinder, York County, George B. Jones, King's Countty and B. Frank Smith of Carleton County, who was elected as a farmer candidate.

(Continued on page 65)

Retail Lumbermen Discuss the Use of Truck

Motor Service Means Less Employees, Quicker Results and Greater Convenience —Others Say That Team Haul Meets Their Present Requirements

To purchase a motor truck or not? This is a question which many a retail lumberman has been debating in his own mind for a considerable period. The average dealer is seeking to get all the practical and useful information he can on this important subject as delivery is one of the vital problems of a modern, efficient service.

A large number of the retailers in small towns have added trucks to their equipment during the past season and find that their possession and convenience are decided assets to their business, not only economically but in other ways. Some dealers, on the other hand, have interesting arguments to present as to why a truck would not fit in their district owing to special circumstances, local conditions, climate, roads, etc.

It is always interesting to learn the views and gain an insight from the experience of others, and with this aim, the "Canada Lumberman" publishes a number of additional interviews on transportation. These opinions will be read with appreciation, both by the man who owns a truck and he who does not, and will help him form an intelligent opinion on the whole subject of motor vs. team delivery.

The John Carew Lumber Co., Lindsay, Ont.: "We are using two trucks in connection with our retail business. One truck is a 2½-ton Republic, which gives first-class satisfaction, and the other is a 1½-ton Ford, which we also find very economical. We find that these trucks are very much quicker, and we can put more than twice the amount of material on a load that we can with horses, although the cost of operating is, we believe, a little higher. We keep six teams of horses on local delivery, and when we take everything into consideration, we do not know which is the most economical. We think probably for the first year or two the trucks would be the most economiical, but once they start to need repair, it would be a question to go into."

West & Jackson, Tillsonburg, Ont.. "We do not use a truck in connection with our business and have always adhered to team delivery."

For Long Hauls the Proper Thing.

Patterson & Crosthwaite, Hamilton: "We have not as yet secured any trucks for our delivery and have not yet been convinced that it is cheaper to deliver via truck. We, however, believe that for long hauls, the truck is the proper thing."

The Young Lumber Co., of North Bay, Ont., say. "We use horses entirely on our delivery and hauling. One of the chief drawbacks to motor trucks in this part of the country is that it is impossible to use them during the winter season."

Fay & Rombough, Aultsville, Ont.: "We never used a motor truck and have had no experience in that line as horse delivery gives us satisfaction."

W. D. Midmer, Napanee: "We would not be able to use a motor truck in our business to any advantage."

The McLaren Lumber Co., Brockville: "We do not operate a motor truck because we would have to keep a team for winter delivery, and we find for our own operation, in which there are practically no long hauls, that we do not require a truck."

Anderson & Harris, Dryden, Ont.: "We have had no experience in truck delivery, but are considering putting in one in the near future, and are trying to get all the information we can in reference to the costs, etc."

Less Employees—Quicker Service.

Wilfred H. Pauze, 1822 Cote Des Neiges, Montreal: "I use two trucks, one a Republic 1½ tons and the other a Mitchell 1½ tons. I am sorry that I have no data regarding the cost of upkeep. The fact of using motor trucks means less employees and quicker deliveries."

Robert Light, Napanee, Ont.: We do not use a motor truck. All our cartage and hauling of lumber from the cars and delivery of goods is done by horses."

James Shearer Co., Limited, Montreal, say they have three trailers suitable for carrying loads of approximately 1,500 feet of lumber. These they tow with a 1-ton Ford truck equipped with a Martin fifth wheel. They believe that in summer the operation of a truck is about equal in costs to horse-drawn delivery. The advantage of a truck, however, is on space and speed in delivery where time is a factor.

McLennan Lumber Co., Montreal, say they do not use motor trucks in connection with their delivery department.

The Piercey Supply Co., of Halifax, N. S., say that up to a year ago they did not have a motor truck in operation, all their trucking being done by horses, of which they had usually from fifteen to twenty, and in many cases they found it necessary to hire to a certain extent. W. D. Piercey, managing director of the company, states that for a long time he was of the opinion that movement of building material could be done in Halifax more economically by team than motor. The reason for this is owing to the city being very hilly and also the streets and roads leading to the country were, generally speaking, in a deplorable condition. This naturally added to the upkeep of a truck and greatly reduced its facility. Continuing, Mr. Piercey said: "Last year Halifax undertook to grapple with the condition of the streets, and to-day we can boast of having our main city thoroughfares in as good condition as any city of equal size in the Dominion, and the program has not yet been completed. These improved roads and streets have brought about a change in trucking conditions, so much so, that we have for some months been using a Ford truck on light deliveries, with good results. We find it does the work of about three express deliveries at about two-thirds the cost, and were it not for the increased price of gasoline and motor oil, we believe this truck would accomplish 100 per cent. more than horse delivery at the same price.

"A few weeks ago we bought a one and a half ton Maxwell which we intended putting into deliveries of medium weight, but as it has not yet been put into operation, nothing can be said about the cost of upkeep and comparative results with team; we are satisfied, however, it will work out to our advantage."

H. P. Perrault & Fils, Beloeil Station, P. Q., say they do all their hauling of lumber by team and they do not keep a record of the cost of hauling.

D. McLellan, of New Liskeard, Ont., states that he does not use a motor truck in connection with his lumber operations. His activities are confined strictly to team.

Chappell Bros., of Sydney, N. S.. "We use one motor truck in our delivery. It is a Maxwell 1-ton truck. We do not keep an exact cost of our delivery, but we consider that our horse delivery is about the same as that by motor. One advantage of the motor truck is that we can make better time on three or four-mile runs, and in this way give our customers better satisfaction in the way of regularity and promptness. Our opinion is that deliveries under one mile can be made more cheaply by horse-power than motor."

Cutting up some choice cuts of beef for supper at one of the Canadian National Railway logging camps in northwestern Ontario

B.C. Lumber Activities Must Be Co-ordinated

If Market is to be Made Satisfactory Then Every Factor in It Must Participate in All Movements—Some Features of the Recent Congress

Some outstanding features of the Pacific Logging Congress, which held its eleventh annual sessions in Vancouver, Oct. 6 to 9, were studies in economy, discussions on welfare of the men employed in logging camps, and description of forestry activities, looking to the prevention of loss of timber and the perpetuation of forest areas. Economy was possibly the leading topic, for its different phases cropped up in all descriptions of new machinery or methods for logging, in the suggestions for saving timber, and then the whole idea of welfare work, which was a prominent part of the extensive programme, is the saving of men and increasing their efficiency. Perhaps underlying the whole economic tone of the congress was the thought that costs of logs along with all other commodities in the industrial world must be revised downwards.

Rather strangely, while coming events in price conditions the world over may have been foreshadowed in the tone of the congress discussions, there was not one item on the programme directly dealing with the lumber situation, or the outlook for the millmen. That the logging industry is vitally interested in the lumber market is obvious, yet there was no discussion with the lumber manufacturers, nor did the loggers themselves discuss the financial situation which is the outcome of the present lumber market conditions—much less did any one seem to be struck with the importance of studying the question as a whole, and not merely in connection with present temporary conditions. The fact did not seem to come to the notice of the gathering that co-ordination of all interests in the lumbering industry, right down the line from logger to consumer, would tend to stabilize market conditions, and at least, regulate the industry so that it would be prepared for such periods as that now being faced.

It is all the more noteworthy that no action was taken along lines which would create co-operation between mill-men and log producers, because the eleventh congress was a testimony of the value of organization and the benefits to be mutually derived from co-operation. Throughout the four days the programme was carried out in a manner which showed organization of the most thorough and efficient sort. The loggers have clearly shown that they know how to organize, how to get together and how to stick together. The B. C. Loggers Association, whose members are, of course, also members of the Pacific Logging Congress, have held together all this year when the manufacturing end of the industry has been suffering from a number of disturbing and unexpected influences. While the latter have been making all sorts of prices for lumber, and the lumber market has dropped from the peak of high prices to a basis below actual production costs, the loggers have stood pat. They have maintained the prices set early in the season, and below which they say present cost of production will not show a margin of profit.

Getting Nowhere is To-day's Situation.

It is a fine stand to take, and maintaining it is a fine record to point to. But like all one-sided affairs its weakness is that it gets nowhere. The mills are to-day facing almost a general shutdown. In fact, if the advice of the loggers themselves were taken by the mills the curtailment of output would be very much greater. And the feeling among the mill-men is that they must more than curtail the lumber output, that they must take drastic steps to close as many mills as it is possible to. As this is written the process is well under way. It is safe to say that twenty per cent. of the mills have already closed. Others will close and those which for one reason or another have not or do not intend to close, will reduce their cut of lumber very materially. Some mills, those in the coast district which have a share of the big export railway timber orders still undelivered, cannot very well shut down. The effort to secure export business has led to very good results and the mills feel like taking care of their commitments in that trade, even at some inconvenience and sacrifice. The chief trouble these export mills are facing is that the railway tie and sleeper orders call for all one class or lumber. Other grades cut in the process of taking tie timber out of the logs, have to be piled up in the yards for want of a market.

The foregoing remarks concern the coast mills in the main, for the reason that the mountain mills have already taken action and the shut down in the interior is becoming general. By Nov. 1st, so Secretary I. R. Poole, of the Mountain Lumber Manufacturers' Association stated to the writer recently, nearly every one of the thirty or more mills which operated in the Mountain association this year will have closed for the year. It is true that the majority of the mills in the interior are only operated in the summer season anyway, closing down when cold weather comes on. But this year the shut-down was faced much earlier owing to market conditions. There are some mountain mills which are operated all winter ordinarily, because they have hot-pond equipment enabling them to move their logs from the water. A few small mills also which have dry logging, have cut in the winter in the past.

Making Start Towards Organizing Lumber.

It is cheering to note that a good start in the direction of getting the various elements of the lumber trade together has been made. The coast and mountain manufacturers held a joint meeting in Vancouver during the sessions of the Pacific Logging Congress. As a result an invitation was sent to the Western Retail Lumber Dealers Association inviting them to a conference at Calgary, the retailers to fix the date and to appoint their representatives to attend the conference if they were agreeable to the idea. It has now been fixed that the date for the proposed conference is to be Oct. 26th. It is expected that a representative gathering of the manufacturing and western retail interests will be present, both coast and mountain lumbermen having agreed to attend.

A consideration of the market in the Canadian Northwest is the chief topic for the coming conference, which will be rather in the nature of a series of committee meetings. One of the important points to be taken up is the passing along to the consumer alterations in price as they occur, and whether they are up or down. The manufacturers rather resent the public attitude of the consumers—reported in the daily press—that they are looked on as profiteers. They point out that they are now selling lumber from the mills at an average all round reduction of nearly if not quite one-third less than say at the beginning of the present year. They point out further that the cost of logs to them has not dropped one cent per thousand, nor has labor cost been reduced, and that all machinery, equipment and supplies are still being sold at old high plane rates.

Car Trade Dropping Out of Sight.

An effort is also to be made to study the western market with a view to improving demand, which has been less favorable even than the season would warrant. The fact is that car trade, whether to the Canadian Northwest, to Eastern Canada or to the United States, has dropped almost out of sight. It is quite some time since the lumber trade saw such a dearth of orders. And to add

A. Mayno Davis, Ottawa.
President of newly incorporated organization, the Taft-Davis Lumber Co., with head-office in Ottawa

Duncan M. Allan, Stratford.
Newly appointed eastern representative of Canadian Puget Sound Lumber and Timber Co., Victoria.

to the unsatisfactory condition, such orders as are offering, are forced onto a competitive basis—it is a regular "auction market" of the dutch variety. The low bidder gets the business when any one of the few orders in sight is placed. Freight rate increases undoubtedly have had a great deal to do with the stagnation in rail trade. But lumber as well as any other commodity will have to adjust to the new schedules. That they are here to stay, with the exception of the five per cent reduction to be made at the first of the year, most every one has made up his mind to believe. That western lumber retailers have chosen a wise and conservative course during the 1920 season and curtailed both buying and selling to a minimum in an effort to put the trade on a basis is the general view expressed by lumbermen who are in close touch with the situation on the prairies. There never has been a time when the western retail trade could not get its orders for stock supplied to any extent in reason, but the action to reduce credits both ways, has been of their own doing.

While these considerations may have some weight, there is a well-defined idea abroad that lumber prices are in an unsettled and unstable condition—that they are just as likely to take a tumble as to go up, and rather more so. Any one who knows anything at all of conditions in the lumber manufacturing industry on the Pacific Coast, knows very well that there is not the least chance in the world of a further reduction in lumber prices as received by the manufacturer. More than one mill has notified its sales representatives east and west that present prices do not interest them, that they are simply not in the market on quoted offers. The truth is that present prices being realized on ordinary mill run grades do not show a profit at all, while upper grades have been cut to quite too fine a point for safety, considering the fact that the percentage of uppers is never great enough to move off the common stocks quickly in ordinary course of trade.

Getting To Know Where They Are.

The joint conference at Calgary is a big step in the right direction. It will at least start something in the way of co-ordination. And that will eventually lead to stabilizing the lumber industry. It must not be forgotten, however, that there are other interests left out entirely, and which be consulted in any effort to establish a broad basis for re-organization of the industry on a definite plan, which will enable those in it to carry it on as any other of the leading industries is organized. The loggers will eventually have to be consulted, in so far as the coast mills are concerned at least, for seventy-five per cent. or more of the logs cut into lumber are bought in the open market by the mills, the two forming distinct branches of the industry. There are other interests also, which must be taken into consideration if a working plan is to be put in operation to prevent undue disturbances in the lumber trade.

No one expects or hopes for a fixed price for lumber any more than for any other commodity. But what every one, from manufacturer to consumer would be justified in demanding is uniformity, so that each party would know where he "was at" and could figure on conditions for the moment as assured. If a market is to be made satisfactory, then every factor in it must participate in all its movements, up or down. That is the crux of the market situation in western lumber circles—that is just what does not exist today. There is apparently the will and the desire to attain it on the part of the lumber producers.

Congress Had Fine List of Addresses.

Returning to the Pacific Logging Congress, and the programme presented to the great gathering of seven hundred delegates from all the western states and British Columbia, there were papers and addresses from prominent authorities, both practical and scientific from all parts of Canada and the U. S. British Columbia contributed a well-prepared review of forestry work by that clever public official, Chief Forester M. A. Grainger, whose resignation was heard with regret by all. The progress of Canada's westernmost province in modern methods of forest protection were well described. Its use of the aeroplane, wireless telephone and telegraph, and its extensive equipment of portable gasoline pumping engines for fire-fighting, were among the advances recounted.

Another British Columbian, Mr. Hugh B. Gilmour, member of the Workman's Compensation Board, told of the plan and working of that board, and of its collateral work of "Safety First" in camps, mills and factories throughout the province.

Another B. C. contribution to the congress programme was a paper on a sky-line trolley for shingle bolts, much on the order of the sky-line of heavier type for logging operations. Mr. H. A. Stoltze, of the Allen-Stoltze Lumber Company was the author of this and the equipment he described is a purely B. C. production, the main feature being the "bicycle" or ship which travels on the overhead wire, which is the design of the Heaps Engineering Works of New Westminster, who also make the gasoline engine which supplies the motive power. This is in all essentials a donkey engine, using gas instead of steam power, and the whole outfit is of lighter design and construction than that required for heavy logs.

Mr. T. W. Fairhurst of the Vancouver Machinery Depot, Ltd., read a highly amusing and entertaining paper on logging teak with elephants in Burmah, where the speaker spent considerable time and had first hand experience.

Mr. A. H. DeWolf of Merritt and Cranbrook, an authority on log flume construction presented an address on that subject, describing a method of logging which is in very common use in the interior of the province.

Lumber Industry Takes First Plance.

Hon. T. D. Pattullo, Minister of Lands, under whose department comes the administration of all Crown timber lands in B. C. except those in the Dominion Railway Belt, was a guest at the Congress annual banquet, tendered by the B. C. Loggers Association and the B. C. Lumber Manufacturers jointly. The minister took as his theme in an after-dinner speech, the stabilization of the lumber industry and the conservation of the standing timber in B. C. He pointed that the lumber industry was chief in importance in this province. "Last year," he said, "the lumber values produced in this province were $70,000,000 as compared with $60,000,000 from agriculture, which was next in order of value. The task devolves on the Government to bring about the development of this industry, which is situated in the finest country in the world."

"We in British Columbia," continued the speaker, "are getting more progressive every year and we have learned many lessons, one being that there has been an extravagant waste of timber in the past—to such an extent that it might mean in the near future governmental action to safeguard the interests of those who come after us. We shall be at fault if we do not take steps to preserve the timber lands of the province."

Speaking of the work of the congress Hon. Mr. Pattullo said:—"The traditions of the lumbermen in this country are same as those accross the border. The success of this congress may be attributed in great measure to the deliberations contributed to jointly by delegates from across the boundary, who form the largest contingent at the congress."

In the course of the programme, in addition to the many technical papers describing new machinery and new methods of logging, a most complete programme of motion and still lantern pictures was run synchronously with the presentation of the various subjects. This formed a most attractive and instructive feature of the programme, and in many cases gave point to the remarks of the speakers.

Humanizing The Logger As An Individual.

In the department of Welfare, which had to do with the life and conditions of the employees in the camp, there were three distinct features, camp equipment, which included sanitation, Safety First measures, and social and mental recreation and entertainment. Many papers were given and a large number of scientific and practical men were present to tell the congress just what great advances had been made along these lines. The contribution on Safety First included addresses by directors of state insurance from nearly every state on the Pacific slope, as well as Mr. Gilmour's address on accident prevention. On Sanitation, Dr. Tharaldsen of Portland gave a most comprehensive description of progress of sanitation in logging and lumber camps on the Pacific Coast. The social side was taken care of by the International Y.M.C.A. representatives, and the description of the concerts, reading rooms, entertainments and other provision for mental and moral improvement was well described. In the whole programme was given the humanizing of the logger as an individual. Today he lives in decent quarters, has access to shower bath, sleeps in white sheets, eats at an attractively prepared table the best of food, and in the evenings he is entertained with the best of motion picture programmes, concerts, lectures and study courses. He responds by cleaning up and dressing in good clothes in the evening, and in other ways showing that he has discarded most of the caveman attributes of the logger of a past generation.

How Water Affects Daily Supply

Ottawa and Hull are faced with an almost complete tie-up of the pulp, paper and lumber mills because of the low water in the Ottawa River. The mills at the Chaudiere are operating far below normal. More than 800 men are out of employment. The low water is also causing trouble at the Edwards mills, and if the river level does not rise in a very short time there will be a large number of men inactive. The production of paper, newsprint and cardboard has been reduced by at least two-thirds. Only heavy rainstorms at the head of the Ottawa River will alleviate the situation.

Progressive Member in Lumber Arena

Louis Armand Daigle, Montreal.

Louis Armand Daigle, who is vice-president and general manager of J. P. Dupuis, Limted, is one of the best known of the younger men connected with the lumber industry in Montreal district. His firm manufacture and deal in lumber of all kinds, and their offices are located at 592 Church St., Verdun, Que. The company manufacture not only lumber of every sort, but also doors, windows, architraves and flooring and all kinds of mill work, which is done by experts. The company have a saw mill at St. Dupuy, Pontiac county, and also a New York office, from which their American business is handled.

Mr. Daigle was born at St. Roch, Richelieu County, in 1892, and was educated at Mount St. Bernard College, Sorel. He started in the lumber business ten years ago, and has won a large measure of success. He resides at 108 Rielle Ave., Verdun, and is a member of the Kiwanis Club of Montreal and the Montreal Reform Club, and outside of business, is fond of fishing, hunting and tennis.

Huge Eastern Transfer About Completed

Consummation of the transfer of the New Brunswick Railway Company's extensive timber limits, amounting to approximately 1,000,000 acres, to the Fraser Companies Limited, is now in course of completion, says a recent despatch from Fredericton.

The option which the Fraser interests obtained on the New Brunswick Railway Company's lands at a special meeting of the shareholders in June, expired this month, and it has since been renewed, some difficulties which for a time threatened to put an end to negotiations, having been overcome.

The amount involved in the transfer is said to be between $11,000,000 and $12,000,000, and it is learned that there is soon to be a flotation of preferred stock to take care of the transaction by a new organization, which will be known either as the Fraser Company or the Fraser Pulp and Paper Company, which will eventually absorb all the pulp, paper and lumber enterprises of the Fraser Companies Ltd.

Simonds Establish British Saw Company

The Simonds Canada Saw Company, Limited, "The Saw Makers" of Montreal, Quebec, have just secured a charter and established a new company in Great Britain, to be known as Simonds Saws, Limited. An office and shop has been opened at 53 Bayham Camdentown, London, N. W., where a full line of Simonds Saw Steel Products as is demanded in Great Britain will be carried. The shop will provide for maintenance and repairs of saws, machine knives, and other edge tools produced by the Simonds Company. Guy A. Eaves, formerly connected with the Fitchburg, Mass., plant of the company has assumed the duties of office manager, and Leon E. Wilbur, a Simonds man, who has covered the Great Britain territory since his discharge from the army in France, will be associated with him. The Simonds Company now maintains plants in Fitchburg, Mass., Chicago, Ill., Montreal, Canada, and a steel mill at Lockport, N.Y., where the steel used in the manufacture of Simonds Saw Steel Products is made. In addition to the new British branch the company maintains twelve branch houses, located throughout Canada and the United States.

New Plant is Most Modern One

The up-to-date mill and woodworking plant being erected by the Miller & Gordon Mfg. Co., at Carleton, N. S., is rapidly nearing completion. The buildings consist of a three-storey sawmill, planing mill and woodworking plant, 125 x 50 feet, having concrete foundations, together with separate boiler house, engine room and dry kiln. In addition, a warehouse 90 x 50 feet is being erected at Brazil Lake Station, about five miles from the plant.

The products of this modern plant will include hardwood flooring, boxes, dowels, clothespins and toys of different kinds, together with lumber and building material, including mouldings, gutters, gutter-leaders, laths, shingles, etc. Most of the raw material will be secured from the company's own timber limits, which consist of about 10,000 acres of fine timber. These limits are situated near the mill so that hauling and lumbering expenses should be very low.

The equipment in the mill consists of a Waterous band mill, log haul-up, live rolls, trim saws, Oxford edger and other items which go to make up the modern sawmill. In the woodworking plant six clothespin lathes and slotters, revolving tumbler and drier, dowel planer, two W. S. Hawker adjustable head dowel machines, broom handle machine, two Weymouth and three variety lathes go to make up the installation. The heating system for the clothespin drier was installed by the B. F. Sturtevant of Canada, Limited, Galt, Ont.

The planing mill equipment consists of band resaw, Cowan tenoner, Cowan surface planer, buzz planer, a number of trim and rip saws, box-making equipment, 10-inch American outside sticker supplied by the Garlock-Walker Machinery Co. of Toronto, and other smaller machines. The belting used in this plant is the well-known "Kling Tite" brand manufactured by the Goodyear Tire & Rubber Co., with the exception of a leather belt for the main drive which was supplied by D. K. McLaren Limited, of Montreal. A machine and blacksmith shop will be maintained to take care of all repairs. Steam power is used, three 75 h.p. boilers having been installed. The engine is a 225 horse power Laurie.

W. E. Miller is president and treasurer, Winfield Gordon, vice-president, and Roy D. Miller, manager and secretary.

New Position for Mr. Sherman

Darwin W. Sherman, well known to many persons in Grand Mere, P.Q., sailed on Oct. 23 for London, where he will take over the European sales of board manufactured by the Laurentide Company and by Price Brothers. Mr. Sherman joined the Laurentide Company after his graduation from Yale University in 1912. During the next three years he held many positions of importance and was at one time in charge of the Employment Department. In his new position, Mr. Sherman will again work for the Laurentide Company, as he will handle the sale of board directly.

Loggers Hear About Compensation Act

Hugh B. Gilmour, of the British Columbia Workmen's Compensation Board, Victoria, recently read an interesting and instructive paper before the Pacific Logging Congress in Vancouver on the operation of the act. He explained the methods used to collect the funds and the manner in which they were disbursed.

The prevention of accidents was dealt with in detail with a summary of the work of prevention committees in industrial plants and camps. Referring to the logging industry he gave a number of methods by which accidents could be averted and strongly advocated the use of first aid methods.

"The experience of all boards goes to show that it is the trivial accident which may ultimately cost the most," he said. "The application of a little antiseptic treatment to a trivial injury will in 99 per cent. of the cases immediately cure, whereas when it is allowed to go blood poison sets in, the accident may ultimately cost a large amount in compensation, surgeon and hospital accounts and possibly the life of the workman. We believe that several hundred thousand dollars have been saved to the employers in this province by reason of prompt first aid service."

No Profit on Current Lumber Prices

Speaking of lumber conditions in the West, I. R. Poole, secretary of the B. C. Mountain Lumbermen's Association, who was in Vancouver recently, said: 'The demand for lumber for granaries, which as a rule at this time of year is heavy, has fallen away considerably. This is due largely to the fact that the banks are anxious that farmers should dispose of their grain at an early date without storing it as is the usual custom. Another factor is that the retail companies are anxious to clean up old accounts and let their stocks run down until conditions become more settled. It is early yet to prophecy as to the demand next year."

In explaining the effect of the increased freight rates on the British Columbia lumber trade, Mr. Poole quoted figures which are illuminating. Under the old schedule the rate per 100 pounds from Nelson to Toronto, for instance, was 72 cents or $18.72 per thousand feet. Under the new rate the freight is 98½ cents per 100 pounds or $25.61 per 1000 feet, an increase of $6,89. Compared with the rate to Toronto from Arkansas City, one of the central points of the southern pine industry, this increase is serious. The old rate from Arkansas to Toronto was 34½ cents per 100 lbs., a total of $9.37 per 1000 feet; the new rate brings his up to 48 cents per 100 lbs., or $12.48 per 1000 feet, an increase of $3.11 only. This instance, said Mr. Poole, showed how the British Columbia lumbermen suffered by the increase to them being on a long haul as against the southern dealer's comparatively short haul.

"It is impossible for lumbermen to sell their product at current prices and make any profit worth while," said Mr. Poole.

Pulpwood and Its Varied Activities

Will Pulpwood Prices Come Down?

There is likely to be an over-production of pulpwood in Ontario, according to the opinion of representative buyers. Speaking of the general situation, one of the leading Ontario purchasers says: "Yes, we are not buying any pulpwood at the present time as we have carried out our contracts for the present year and so far as acquiring any supplies on speculation is concerned, we intend to adopt a conservative policy. The future condition of the paper market is too uncertain to warrant any one being a plunger in the pulpwood business at the present time.

"Mills on the other side of the line, outside of newsprint, are getting quieter and there is not that keen demand which characterized the situation some time ago. Groundwood pulp is easing off in price and just now many pulp mills, with whom we had placed exceptionally large quantities a few weeks ago, are only buying limited quantities. Of course, the higher freight rates have proved a handicap. I look for a fall in the price of rough spruce and balsam. The drop will, probably, be $2.00 per cord and will be brought about owing to transportation charges. About the lowest rate from an Ontario point to any mill in the Niagara or New York district is 20c per cord. Rough spruce and balsam weighs about 4,500 lbs. to the cord, which would make the carrying charges $9.00. Now dry peeled spruce and balsam only weighs 3,200 lbs., and the carrying charges will be $6.40, or a difference of, say, $2.50, between rough and dry peeled wood, the difference being in favor of the latter. The peeling season is now over, and all wood that is being cut is rough and if it is to compete with the dry peeled product the rough must come down at least a couple of dollars.

"There is more pulpwood being offered us than we can accept at the present time, and not only are all farmers and settlers cutting pulpwood, but many lumbermen and limit owners have gone into this pursuit almost exclusively. The natural result is developing in northern Ontario, viz., over-production.

"South of North Bay rough spruce and balsam is selling at $13.00 to $14.00 per cord, f.o.b. cars, and peeled spruce and balsam, $21.00 to $22.00 per cord, f.o.b. cars. Peeled poplar is bringing $12.00 to $14.00 and peeled hemlock $15.00, f.o.b. cars. North of North Bay prices are from $1.00 to $2.00 less owing to the higher freight rates."

Great New Quebec Rich in Pulpwood

In northern Quebec, in that part of the Province lying adjacent to the Province of Ontario and extending from the south end of Lake Timiskaming away north to and beyond the National Transcontinental Railway, and in fact reaching away into the district of Ungava, one of the last remaining great opportunities of Empire building is gradually unfolding.

Vast as are the potentialities of this enormous area in minerals, there is an immense wealth in other natural resources which are plainly visible. Chief among these are scores and even hundreds of miles of unbroken timberlands over which is massed in unbroken lines millions of cords of the finest spruce pulp on the continent.

Captains of industry who have followed the growth of the mining, farming and pulp and paper industry in Northern Ontario, and who have seen more than a quarter of a billion produced in silver and gold alone, with many added millions in products of the pulp and paper mills, as well as from the agricultural pursuits, are unanimous in expressing boundless confidence in this result being duplicated in the great new Quebec which is about to be opened up. Indeed, on almost every hand, those who are given to making observations of progress, as well as future possibilities, are found expressing great wonder that the opening of this part of Quebec should have been left until this late date.

The Canadian Pacific Railway has decided to enter northwestern Quebec and has already completed surveys from Kipawa on the south to the Des Quinse on the north, and plans to commence actual construction work this fall. The early completion of this stretch of three-score miles or so following a route close to the east shore of Lake Timiskaming, and possibly touching at Ville Marie, will terminate at the great series of waterfalls known as Des Quinse.

Will Use Hardwood for Groundwood Pulp

Under the supervision of the Forestry Department, about one thousand cords of hardwood are being cut in the vicinity of the Manigance Rapid, about twenty miles north of Grand Mere, P. Q., which will later be brought to the Laurentide Company's mill for the manufacture of groundwood. Experiments carried on for the past two years show that hardwood can be used for groundwood in place of spruce and balsam, up to a certain percentage, and this year the experiment will be carried on with a much greater quantity of hardwood.

The hardwood that is being cut is yellow and white birch, maple and poplar. The yellow birch and the maple will be brought down the river in barges, and the white birch and poplar will be boomed down. If costs of cutting and bringing this hardwood to the mill prove to be satisfactory and the wood itself is found to be useful in the manufacture of paper to supplant to some extent the use of spruce and balsam, there are thousands of cords of this wood at easy distance from the mill that can be used advantageously.

According to Ellwood Wilson, head of the Forestry Department, the cutting of this hardwood is a great aid to the natural reforestation of the woods by the soft woods, which grow somewhat slower than the hardwoods and which, unless the hardwood is cut out, fail in the competition for growth.

New Pulp Projects for the Coast

Important developments in British Columbia's pulp and paper industry are looked for within the next few months, and it is expected that following the election in the United States, additional American capital will be available for investment.

Some interests, however, are not even letting the presidential contest stand in their way. A New York company, for instance, is reported to be preparing to build a pulp and paper mill at Kitimat Arm, several miles north of Prince Rupert. A Japanese syndicate is said to have purchased a tract of timber suitable for pulpwood on Louise Island, in the Queen Charlotte group, but development is being held up on account of the uncertain financial situation of Japan.

Whalen Company Elects New Executive

The appointment of the Hon. T. W. McGarry, K.C., to the position of president of the Whalen Pulp and Paper Mills, Ltd., in succession to Sir George Bury, who resigned recently, was announced recently. In addition the following executive committee was appointed: Hon. T. W. McGarry, Toronto; I. W. Killam, Montreal; Alexander Smith, Chicago; James Whalen, Port Arthur; M. J. Haney and W. G. Ross, Toronto, and M. R. Higgins, San Francisco.

The executive have under consideration several names for the position of general manager of the company, but appointment will not finally be made until the president makes his recommendations after visiting Vancouver, for which place he leaves in the immediate future. In the meantime it is intended to push operations vigorously in connection with the company's plants. Sir George Bury was managing director as well as president, but under the new arrangement it is likely that the positions will be divided.

Will Erect New Pulp Plant

The Three Rivers Pulp & Paper Co., Limited, of Montreal, Que., are offering 4,000,000 8 per cent. cumulative participating preference shares. Noah A. Timmins, Montreal, president of the Hollinger Consolidated Gold Mines, Limited, Montreal, is president of the company; D. Breakey of Breakeyville, Que., is vice-president, and J. Woodman Smith of Milliken Park, Scotland, is one of the directors.

In a prospectus issued by the company it is stated that the property comprises an area of 787 square miles or 503,680 acres, situated on the River St. John, Magpie, Chambers Salmon and tributary streams and lakes, and the property is estimated to contain 4,000,000 cords of black spruce and balsam pulpwood, and logging conditions are very favorable. The property is in virgin territory, lumbering operations never having been carried on before. The company intend to proceed at once with the erection of a modern groundwood pulp plant with an initial capacity of 100 totns per day. This will be located at Three Rivers, on a suitable site already located, with excellent shipping facilities. It is planned to have the mill in operation in 1921.

The company have secured the services of J. J. O'Sullivan, formerly associated with George F. Hardy of New York, and for a number of years connected with the Northcliffe Mills in Newfoundland. Mr. O'Sullivan will superintend the erection of the mill, and its subsequent operation. It is expected that the cost of the plant and working capital will be $4,000,000, and the proceeds of the pre-

sent sale of bonds will cover the outlay. The mill, including the site at Three Rivers, complete equipment, including sidings, lumbering and shipping facilties, is valued at $1,500,000; 787 square miles of timberlands, embracing 503,680 acres, containing 4,000,000 cords of timber and pulpwood at a stumpage cost of 31¼ per cord, $1,250,000; working capital, $1,250,000, making a total of $4,000,000.

It is stated that the stumpage values of pulpwood range from $3.00 to $6.00 per cord and that the price paid for the limits is a very low one. At a conservative valuation of $2.00 per cord, this being the minimum value established by the paper controller, Mr. Pringle, the limits would have a commercial or reproductive value of $8,000,000 or a total valuation of the company's assets of over $10,000,000 or more than 2½ times of preferred stock issue.

It is understood that a group of British capitalists, interested in the paper industry, have subscribed for $400,000 of the preferred shares at the same price and upon the same terms as these are being offered the public. These interests are negotiating with the company for a contract, covering their entire requirements of pulp, approximately 40 tons per day, at prevailing market prices, subject to monthly revision. It is also declared that these interests intend erecting a paper mill in Canada, in which event the site will offer ample area for both mills and any subsequent additions that may be required.

So far as the supply of pulpwood is concerned, it is estimated that the standing timber on the companys limits is more than sufficient to keep a mill of double the proposed capacity of the plant at present planned running for more than fifty years.

Clarke Bros. Increase Size of Plant

The new buildings which Clarke Brothers, Limited, have had under way at Bear River, N. S., are now nearing completion, and the machinery is being rushed forward and set up as fast as it arrives.

The company was much hampered last Fall on account of the wet season, and on account of the extreme cold Winter, which was the severest experienced in the last forty years, and which prevented the carrying on of the work for four months' time.

Mr. W. G. Clarke, the chairman of the board, points out that the enlargements now under way should double the profits of the company.

"As far as our pulp mill is concerned," he adds, "the delays have been beneficial to the company, for during this period the permanent

W. G. Clarke, Bear River, N. S.

shortage in kraft pulp has become more accentuated, and has brought home to us more forcibly the wisdom of increasing the output of our mill. During this same period there have become available certain rights and improvements in the manufacture of kraft pulp which the board fortunately has been able to acquire and which will greatly enhance the quality of the output of the mill.

"The original mill was at the rate of thirty tons per day. The extension we are now installing with the additional equipment which we have purchased, will give us a capacity of fifty tons per day. Although we have been able to almost double the capacity of our mill, we only found it necessary to increase our indebtedness by $250,000, making our total indebtedness $1,250,000, which will more than complete these additions and improvements and provide such working capital as is required to carry on under this intended program. The additional finances have been arranged."

Ready Market for Northern Pulpwood

Word comes from northern Ontario that the settlers this year are reaping a splendid harvest in the matter of pulpwood owing to the active demands from the mills, particularly the newsprint plants, who are taking every precaution to be assured of an ample supply due to the world-wide requisition for paper. Many sawmill men are also cutting their small logs into pulpwood. The lumber business is rather quiet at the present time compared with the activity in pulp and paper circles, and this naturally directs attention to pulpwood. In the Cobalt district the prevailing price at the present time is around $15.00, with a payment of $5.00 on account as soon as the wood is cut and piled in the bush. Some mill interests are offering as high as $18.00 for delivery at the tracks. The latter rate is a very attractive one to those who have sufficient capital to keep them going until they can make delivery at the track. The majority of settlers, however, cannot do this as they need "progress payments" to maintain themselves until hauling begins and carry on the work especially if they are employing men to cut for them.

Four or five years ago the price for pulpwood was only $4.50 to $5.00 a cord. At that figure the settler, even when his home was close to the track, could just about make wages and nothing more, while those living a few miles in from the line of steel could only ship out their pulpwood at a loss, a large portion of the cost being absorbed in hauling.

With the present high prices, however, these homesteaders can now ship out their pulpwood with a good margin of profit. Many residing four and five miles from a siding have now entered the business, and carry on successfully. If prices continue to advance those living six and seven miles away will be at last able to find a market for their pulpwood, instead of having to burn it as they clear their land. Those living close to the track make big profits on the hauling alone.

Some settlers who do not care to enter the pulpwood business themselves are able to dispose of the material at from 50c. to $1 or more per cord "on the stump," according to its proximity to the cars, and are thus receiving some revenue from their land owing to the boom. Men employed in cutting are being paid $6 per cord, and as a good cutter can cut and pile over a cord and a half per day, not a few of them are earning as high as ten dollars per day.

Fire-killed spruce—that is, spruce from which the bark has been removed by bush fires, and which is otherwise undamaged—is in considerable demand, and realizes a higher price than the green spruce, as it does not require to be peeled or rossed, green spruce at the present time fetching around eleven dollars. This fact goes to prove that the settler sometimes benefits instead of loses when a bush fire gets in amongst his pulpwood. A few years ago a carload of fire-killed spruce was sent to one of the large pulp mills by a settler near Cochrane, Ont., to ascertain if this class of material could not be utilized, as there is a large quantity of it in burnt-over areas. This trial order proved a failure, and the mill interests refused to accept any more of it. Since then further experiments have been made, and means discovered whereby it can be used to advantage.

Price Bros. Form New Company

The shareholders of Price Bros. & Co., Limited, of Quebec, recently received a circular outlining, in part, the plan evolved by the directors of the company for the turning over of the present company's assets and business as a going concern to a new company to be known as Price Brothers & Company, Limited, a corporation formed in 1920. The change will be effected, with the approval of shareholders, on November 1, next.

According to the circular, the business will be turned over to the new organization on November 1, the new company assuming the assets and liabilities of the old company, including the bonded debt, $5,172,098 at 5 per cent., as of November 1, the present Price Bros. company receiving in consideration therefore 426,710 shares of a par value of $100 each, in the new company.

The present outstanding common capitalization of Price Bros. Company is 85,342 shares. This would indicate that shareholders in the present company would be given stock in the company in lieu of their holdings turned in, in ratio of five new shares for each one share now held. The new company will have a capital outstanding, therefore, of $42,671,000, as compared with $8,534,200, the present capital outstanding.

The board of directors of the company has already approved the plan, and it now remains for shareholders to ratify the deal, and they will be offered this opportunity at a special general meeting which has been called for October 25, next, at the head office at Quebec, at 3 p.m.

The market for the stock on the Montreal Stock Exchange has lately reflected the approach of this deal, and from a steady level of around 360, the price has recently gained to 385. In 1919, the low

for the stock was 155 and the high 260. The low price this year to date is 258.

The deal as it will be placed before the shareholders at the special meeting will mark the rounding out of the company's organization, and probably indicate a new era of development for the company.

The company operates eleven saw mills at Batiscan, Montmagny, Rimouski, St. Jaste, Trois Saumon, Price, Natane, Salmon Lake, St. Marguerite, St. Gedeon, and Jonquiere, with a combined capacity of about 1,000,000 feet board measure per day. Shingle mills are also operated at Rimouski, Matane, and Salmon Lake, with a combined capacity of 600,000 shingles per day.

The Kenogami Paper Mill has a daily capacity of 280 tons of newsprint per day, with excellent power facilities, the hydraulic development being 24,000 horse power under a head of 285 feet, this permitting of substantial extensions. The mill site is in the heart of the company's timber limits, located upon the same river as the Jonquiere mill which has for some years been producing pulp, and later cardboard and paper. The mill has an annual capacity of 8,000

Sir William Price, Quebec, P. Q.

tons of cardboard; 15,000 tons of groundwood, and 11,000 tons of paper. The Rimouski groundwood mills has a capacity of 9,000 tons per annum.

The company's products are being extensively and favorably marketed in the United States, Great Britain, other countries, as well as in Canada.

Pigeon River Company Gets Damages

Judgment was handed down by Mr. Justice Lennox at Toronto recently in the action of the Pigeon River Lumber Company, Limited, against the Pulpwood Company of Appleton, Wisconsin, and the Russell Timber Company, Limited, of Port Arthur, awarding the plaintiff company judgment against the defendants for $6,500 damages and costs. This was an action brought by the defendants for damages in obstructing the plaintiff in its drive on the Black Sturgeon River, and was tried without a jury at Port Arthur at the March sittings of the Supreme Court of Ontario, when judgment was reserved. Morris and Babe acted as solicitors for the plaintiff. A. J. McComber for the Pulpwood Company and Keefer and Company for the Russell Timber Company.

Reduce Present Lumber Cut by One-Half

By Frank J. D. Barnjum, Annapolis Royal, N. S.

The International Paper Company, in a recent advertisement in "American Forestry," states, "If the Canadian Forests held by leases which convey all rights of property to the timber could now be regulated, and scientifically protected and operated as are the company's forests in the United States, there is ample authority for an annual increment of at least four per cent."

In the first place, it would be interesting to know of any lands in the United States or Canada, either owned by the International Paper Company or anyone else, that are producing a net annual increment of four per cent.

Secondly, if the International Paper Company is practising scientific forestry methods on its lands in the United States, it also would be interesting to know where.

The only practical forestry, and the only way we can save the remnants of the once magnificent forests that covered this continent, is:—

(1) By immediately reducing the present cut at least one-half.
(2) By greatly increased fire protection.
(3) By improved and less wasteful logging methods.
(4) By planting at least six seedlings for every tree cut or otherwise destroyed, (as not more than one tree out of six planted ever reaches maturity).

To show the fallacy of the statement of the International Paper Company, it is clear that if there had been a net annual increment of even one-half of one per cent., on this continent (instead of an annual growth of four per cent., as claimed), there would be more timber standing today than there was one hundred years ago.

It must be borne in mind that even if we reduced the present volume of the cut one-half and began planting, not millions but billions of seedlings, it would entail a wait of at least fifty to seventy-five years for the maturing of the crop, while the best authorities we have in the country state that the present supply of timber in the East will be exhausted within a period of twenty-five years.

Therefore, all this idle talk about supplying our mills in perpetuity by improved forestry methods, is simply pure bunkum, unless we at least reduce our cut, at once, to one-half the present amount.

This applies with double force to Canada, due to the fact that fire has done, and is doing, a far greater damage than in the United States, and from the added fact that a large portion of our wood growth is so far north that it is too small, too scrubby and too inaccessible to be available as a pulp supply, and also from the fact that

F. J. D. Barnjum, Annapolis Royal, N. S.

it is acknowledged that the standing supply of timber in Canada is only about one-fourth of the amount still remaining in the United States, small as their supply now is.

The thought which I wish to bring out prominently is that, even if we at once begin planting six trees for every tree cut or destroyed, it will take fifty to seventy-five years for the new crop. Hence, it is necessary, immediately, to reduce our cut, at least one-half, in order to make our remaining supply hold out till the new crop matures.

The above conclusion is based on the claim of the best authorities that we have a twenty-five year supply in the East. On the other hand, if my opinion is correct that this supply will last not more than fifteen years, then the gap between the end of the present supply and the maturity of the new crop will be correspondingly greater.

In addition to the fire loss, the loss that is being caused through the ravages of the Spruce Bud Worm and other enemies of our forests is simply appalling; in fact, at the present time, and during the last three or four years, it has amounted to more than our loss from fire and wind.

The International Paper Company states in its advertisement, that they have holdings amounting to 4,500,000 acres that will average five cords per acre; but they fail to state the fact that of these holdings only in the vicinity of 750,000 acres are in the United States, and even conceding their own figure of five cords per acre, and their consumption of 700,000 cords per year, this would only give them sufficient to supply their American mills for a period of five years.

Small wonder there was frantic appeal for the passage of the Underwood resolution.

Personal Paragraphs of Interest

Wm. Leak of Toronto left recently for Redlands, California, where he will spend the winter.

A. E. Gordon, of Terry & Gordon, Limited, Toronto, is on a business trip to the Pacific Coast.

A. Hurlburt of the Sherman Lumber Co., Potsdam, N.Y., was recently calling upon the trade in Toronto.

L. VanMeter of the Dennis Canadian Lumber Co., Whitney, Ont., was in Toronto recently calling upon the trade.

W. B. Mitchell, sales manager of the Cameron Lumber Co., Victoria, B. C. was in Toronto recently calling upon the trade.

William J. Moffat, formerly lumberman, and contractor in western Ontario, died recently in Calgary. He was born near Tilbury, Ont.

H. H. Hastings has been engaged to assist John E. Banks of Toronto, National Hardwood Lumber inspector, in the Toronto district.

F. W. French, secretary of the W. M. Weston Co., hardwood lumber, Boston, Mass., was in Toronto recently calling upon the trade.

C. W. Wilkinson of the Union Lumber Co., Toronto, who has been spending some time in Great Britain, is expected home this week.

W. H. Harris of the Frank Harris Lumber Co., Toronto, is spending some time visiting the mills of the company at High Point and Lake, Mississippi.
